

Contents

Preface and Acknowledgments *vii*

Chapter 1

Structure in Solids *1*

- 1.1 Limits on Homogeneity *1*
- 1.2 States of Matter *1*
- 1.3 Diffraction *2*
- 1.4 Producing Short Wavelength Radiation *4*
- 1.5 The Action of Crystals on the Radiation *5*
- 1.6 Bragg Reflection *5*
- 1.7 Standard Crystal Lattices *7*
- 1.8 Miller Indices *7*
- 1.9 Cubic Point Lattices *10*
- 1.10 Some Simple Crystal Types *12*
- 1.11 Stability Conditions *13*
- 1.12 Avogadro's Number *16*
- 1.13 Surface Structure *17*
- 1.14 The Quasicrystalline State *19*
 - Questions *19*
 - Problems *19*
 - References *21*

Chapter 2

Structure in Molecules and Atoms *23*

- 2.1 Introduction *23*
- 2.2 Symmetric Coordination Structures *24*
- 2.3 Momentum and Energy Relationships *25*
- 2.4 Diffraction by Randomly Oriented Molecules *26*
- 2.5 Electron Diffraction Molecular Parameters *30*
- 2.6 Intensity in a Beam *30*
- 2.7 The Cross Section Concept *31*
- 2.8 The Nuclear Atom *33*
- 2.9 Composition of Atoms and Nuclei *35*
 - Questions *35*
 - Problems *35*
 - References *36*

Chapter 3

Gases and Collective Properties *37*

- 3.1 Macroscopic Properties *37*
- 3.2 Elements of Ideal-Gas Theory *37*
- 3.3 Temperature *40*
- 3.4 Constants R and T_0 *42*
- 3.5 Gaseous Solutions *43*
- 3.6 Translational, Rotational, Vibrational Energies *44*
- 3.7 Quantum Restrictions *46*

- 3.8 Allowing for Molecular Interactions *47*
- 3.9 Gas-Liquid Isotherms *49*
- 3.10 Corresponding States *51*
- 3.11 Compressibility Factor for a Gas *52*
- 3.12 Virial Equation of State *52*
- 3.13 Distribution of Equivalent Particles in a Potential Field *53*
- 3.14 The Maxwell Distribution Law *55*
- 3.15 The Collision Rate Density *57*
 - Questions *60*
 - Problems *60*
 - References *61*

Chapter 4

The First Law for Energy *63*

- 4.1 Independent Thermodynamic Variables *63*
- 4.2 Work *63*
- 4.3 Heat *65*
- 4.4 The First Law *65*
- 4.5 Compression (P - V) Work *66*
- 4.6 Isochoric and Isobaric Heats *67*
- 4.7 Energy Capacities *69*
- 4.8 Reversible Adiabatic Change in an Ideal Gas *71*
- 4.9 Conditions in a Planar Pressure Pulse *72*
- 4.10 Contributions to Energy Capacity C_v *74*
- 4.11 Relating Differentials and Partial Derivatives *75*
- 4.12 The Difference C_p - C_v *77*
- 4.13 Coefficients of Thermal Expansion and Isothermal Compressibility *77*
- 4.14 Exact Differentials *78*
- 4.15 Partial Molar Properties *79*
 - Questions *81*
 - Problems *81*
 - References *83*

Chapter 5

Entropy and the Second Law *85*

- 5.1 Accessibility of States *85*
- 5.2 Integrability of the Reversible Heat *86*
- 5.3 Form for the Integrating Factor *88*
- 5.4 Entropy Changes of Systems *88*
- 5.5 The Second Law *90*
- 5.6 Entropy of Mixing *91*
- 5.7 Probability Change on Mixing *92*
- 5.8 Effectively Contributing Microstates *93*
- 5.9 Helmholtz Free Energy *94*
- 5.10 Gibbs Free Energy *95*

- 5.11 Key Thermodynamic Relations 96
 5.12 The Chemical Potential 99
 5.13 Concentration Gradients 100
 5.14 General Direction for a Process 102
 5.15 A Fourth Law 103
 Questions 103
 Problems 104
 References 105
- Chapter 6**
Relationships between Phases 109
 6.1 Intensive Variables 109
 6.2 The Gibbs Phase Rule 109
 6.3 Equilibrium States for Water 110
 6.4 Solutions 111
 6.5 Aspects of Multicomponent Phase
 Diagrams 113
 6.6 Singularities Separating Phases 115
 6.7 The Clapeyron and Ehrenfest
 Equations 120
 6.8 Variation of Vapor Pressure with
 Temperature 123
 6.9 Variation of Vapor Pressure with Total
 Pressure 124
 6.10 Variation of Vapor Pressure with
 Concentration 125
 6.11 The Mole-Fraction Activity 128
 6.12 Concentration Units 128
 6.13 Elevation of the Boiling Point 129
 6.14 Depression of the Freezing Point 131
 6.15 Permeability of Membranes 133
 6.16 Osmotic Pressure 134
 6.17 Equilibria among Phases 135
 Questions 136
 Problems 136
 References 139
- Chapter 7**
Relationships among Reactants 143
 7.1 Introduction 143
 7.2 Conventions 143
 7.3 Measuring Reaction Heats 144
 7.4 Relating the Isobaric and Isochoric
 Reaction Heats 145
 7.5 Variation in Heat of Reaction with
 Temperature 146
 7.6 Calorimetric Entropy 148
 7.7 Correcting the Calorimetric Entropy to the
 Ideal Gas State 149
 7.8 Correcting the Calorimetric Entropy for
 Frozen-in Disorder 150
 7.9 Key Thermodynamic Properties 151
 7.10 Partial Molar Gibbs Energy 153
 7.11 Gibbs Energy of Reaction 154
 7.12 Energetic Conditions on Equilibria 156
 7.13 Equilibria in Ideal Gaseous Phases 157
 7.14 Heterogeneous Gas Equilibria 161
 7.15 Variation of Equilibrium Constants with
 Temperature 162
 7.16 Variation of Equilibrium Constants with
 Pressure 163
- 7.17 The Activity Coefficient Concept 163
 7.18 Helmholtz Energy of Reaction 164
 Questions 165
 Problems 166
 References 168
- Chapter 8**
Equilibria in Condensed Phases 171
 8.1 The Chemical Potential Revisited 171
 8.2 Useful Equilibrium Expressions 172
 8.3 Conditions Determining Equilibria 176
 8.4 Key Thermodynamic Considerations 183
 8.5 Average Electric Atmosphere about
 an Ion 185
 8.6 An Integral Form of Coulomb's Law 185
 8.7 Application of Gauss's Theorem to the
 Ionic Atmosphere 187
 8.8 Variation of Electric Potential in an Ionic
 Atmosphere 188
 8.9 Free Energy of the Ionic Atmosphere 189
 8.10 Debye-Hückel Equations 190
 8.11 Equilibria among Phases Revisited 196
 8.12 Determining Ionic Activities 199
 8.13 Limitations of the Debye-Hückel
 Treatment 200
 Questions 201
 Problems 201
 References 203
- Chapter 9**
Electrochemistry 207
 9.1 Definitions and Units 207
 9.2 Electrode Reactions 208
 9.3 Electrolyte Transference 209
 9.4 Moving Ion Clouds and Boundaries 212
 9.5 Ohm's Law 214
 9.6 Equivalent Conductance 216
 9.7 Determining Solubilities and Degrees of
 Ionization 219
 9.8 Variation of Ion Conductance with
 Viscosity 220
 9.9 Cell Conventions 222
 9.10 Measuring and Allocating Voltages 224
 9.11 Cell Energetics 225
 9.12 Cell with Transference 228
 9.13 Reference Cells and Electrodes 229
 9.14 Measuring the pH of Solutions 230
 9.15 Overpotential 232
 9.16 Electrode Potentials for Other Solvents 233
 9.17 Further Cell Thermodynamics 234
 Questions 235
 Problems 236
 References 238
- Chapter 10**
Basic Quantum Mechanics 241
 10.1 The Statistical Nature of the Path of a
 Mass Element or Particle 241
 10.2 Representing a Constituent State 242
 10.3 Introducing the Translational
 Symmetries 243

- 10.4 Translational Motion in a General Direction 245
- 10.5 Diffraction Experiments Revisited 246
- 10.6 Rectangularly Symmetric Free Motion 246
- 10.7 Translational Energy of the Molecules in an Ideal Gas 248
- 10.8 Enumerating and Filling Translational States 251
- 10.9 Normalization and Orthogonality Conditions 254
- 10.10 Standing-Wave Translational Functions 256
- 10.11 Confined Rectangularly Symmetric Motion 257
- 10.12 Attenuated Motion 259
- 10.13 Joining Different Constant-Potential Regions 260
- 10.14 A Differential Equation for Multidirectional Propagation 263
- 10.15 The Schrödinger Equations 265
- 10.16 Suitable Solutions 266
- 10.17 Expressing ∇^2 in Orthogonal Generalized Coordinates 266
- Questions 269
- Problems 270
- References 272
- Chapter 11**
- Free Rotational and Angular Motion 275**
- 11.1 Introduction 275
- 11.2 Classical Rotational Kinetic Energy 277
- 11.3 Quantized Angular Momentum States of a Linear Rotator 278
- 11.4 Energy Levels for the Linear Rotator 279
- 11.5 Rotational Spectrum of a Linear Molecule 281
- 11.6 Broadening of Spectral Lines 284
- 11.7 Quantization of Cylindrically Symmetric Rotators 284
- 11.8 The Asymmetric Rotator 285
- 11.9 Rotational Partition Functions and the Resulting Energies 287
- 11.10 Independence of the Angular Factor $Y(\theta, \phi)$ 290
- 11.11 A Multiaxial Formula for $Y(\theta, \phi)$ 291
- 11.12 Directional Behavior of the Standard Rotational State Functions 292
- 11.13 Normalization and Orthogonality Conditions Revisited 298
- 11.14 Magnetic Energy Associated with Angular Momentum 300
- 11.15 Observing Spatial Quantization in a Beam 303
- 11.16 Spin States 304
- Questions 305
- Problems 306
- References 308
- Chapter 12**
- Vibrational and Radial Motion 309**
- 12.1 Pertinent Potentials 309
- 12.2 Schrödinger Equation for the Harmonic Oscillator 312
- 12.3 Quantization of the Harmonic Oscillator 313
- 12.4 Nodeless Solutions 315
- 12.5 Acceptable Wavy Solutions 317
- 12.6 Partition Function for a Vibrational Mode 317
- 12.7 Selection Rules 320
- 12.8 Vibration-Rotation Spectra 321
- 12.9 Raman Spectra 324
- 12.10 Bond Anharmonicity and its Effect 325
- 12.11 Asymptotic Solutions for the Central Field 330
- 12.12 Radial State Functions for a Hydrogenlike Atom 331
- 12.13 Electronic Spectrum of a Hydrogenlike Atom 334
- 12.14 Multiparticle Systems 334
- 12.15 Multielectron Uninuclear Structures 337
- 12.16 Combining Angular Momenta 338
- Questions 341
- Problems 342
- References 344
- Chapter 13**
- Analyzing Organized Structures 347**
- 13.1 The General Behavior of Bases 347
- 13.2 Representing Nondistortive Operations 347
- 13.3 Symmetry Operations 350
- 13.4 Pertinent Permutation Matrices 352
- 13.5 Other Transformation Matrices 353
- 13.6 Classifying Operations 358
- 13.7 Character Vectors 359
- 13.8 Symmetry Species 361
- 13.9 Selection Rules 363
- 13.10 The Orthogonality Condition 364
- 13.11 Generating Primitive Symmetry Species 365
- Questions 368
- Problems 369
- References 371
- Chapter 14**
- States of Molecular Electrons 373**
- 14.1 Introduction 373
- 14.2 The Hydrogen Molecule Ion Model 373
- 14.3 Correlations with Atomic Structures 375
- 14.4 Bonding between Two Equivalent Atoms 376
- 14.5 Symmetric Three-Center Bonds 380
- 14.6 Symmetric Six-Center Bonds 385
- 14.7 Conventional Resonance Energy and the True Delocalization Energy 389
- 14.8 The Variation Theorem 391
- 14.9 Linear Variation Functions 392
- 14.10 Bonding between Two Nonequivalent Atoms 394
- 14.11 Pi Bonding in Fulvene 396
- Questions 400

Problems	401	17.6	The Ideal Concentration Equilibrium Constant	471	
References	401	17.7	Basis for the Distribution Law	473	
Chapter 15		17.8	Black-Body Radiation	475	
Phenomenological Chemical Kinetics	405	17.9	Allowance for Particle Transfer	477	
15.1	The Rate of a Reaction	405	17.10	Fermi-Dirac Statistics	479
15.2	Reaction Order and Molecularity	407	17.11	Bose-Einstein Statistics	482
15.3	Zero-Order Reactions	407	Questions	483	
15.4	First-Order Reactions	408	Problems	484	
15.5	Second-Order Reactions	408	References	485	
15.6	Third-Order Reactions	410	Chapter 18		
15.7	Determining the Differential Rate Law	412	Reaction Rate Theory	487	
15.8	Determining Order from an Integrated Form	414	18.1	The Transition State	487
15.9	The Arrhenius Equation	416	18.2	The Eyring Equation	489
15.10	Reversible First-Order Reactions	418	18.3	The Kinetic Isotope Effect	492
15.11	First-Order Reaction Opposed by a Second-Order Reaction	419	18.4	Static Nonideality	493
15.12	Perturbation Experiments	420	18.5	Transition State Recrossings	494
15.13	Reactions in High Pressure Gaseous and in Condensed Phases	421	18.6	Thermodynamic Considerations	496
15.14	The Encounter Rate Constants	422	18.7	Transition State Location	497
15.15	Solution Reaction Rates	424	18.8	Viscous Nonideality	498
15.16	Dependence of the Specific Reaction Rate on Activity Coefficients	426	18.9	Variation of the Rate Coefficients with Temperature	500
Questions	428	18.10	Further Relationships	501	
Problems	429	Questions	504
