

CONTENTS

Preface, iii

Chapter 1 UNITS OF MEASUREMENT AND THE GAS LAWS, 1

1-1 Units of Measurement, 1

1-2 Gases, 6

References, 15

Problems, 15

Chapter 2 KINETIC THEORY, 17

2-1 The Kinetic Theory of Gases, 18

2-2 Energy, 20

2-3 Motion of Gas Molecules, 24

2-4 Distribution of Kinetic Energies and Molecular Velocities, 30

2-5 Brownian Motion, 36

References, 38

Problems, 39

Chapter 3 INTERMOLECULAR FORCES, 41

- 3-1 Failure of the Ideal Gas Law: Evidence for an Attractive Force, 41
- 3-2 The Van Der Waals Gas Law and Its Consequences, 44
- 3-3 The Nature of the Attractive Force, 48
- 3-4 Relation Between Intermolecular Forces and Physical Properties, 62
- 3-5 Chemical Bonds, 66
- 3-6 Weak Bonds in Biological Systems, 69
- References, 76
- Problems, 76

Chapter 4 THERMODYNAMICS THE FIRST LAW, 79

- 4-1 Thermodynamic Laws, 80
- 4-2 The First Law of Thermodynamics, 81
- 4-3 Enthalpy or Heat Contents, 90
- 4-4 Thermochemistry—The Application of the Enthalpy Concept, 95
- References, 110
- Problems, 111

Chapter 5 THE SECOND LAW OF THERMODYNAMICS,

- 5-1 The Second Law, 114
- 5-2 The Entropy Concept, 125
- 5-3 Evaluation of the Entropy of a System, 136
- 5-4 The Entropy of a Solution in Water: An Effect in Biological Systems, 147
- References, 147
- Problems, 148

Chapter 6 FREE ENERGY, 150

- 6-1 The Gibbs Free Energy, G , 151
- 6-2 Free Energy and the Equilibrium Constant, 163
- 6-3 Summary of Methods for Evaluation Thermodynamic Functions, 170
- 6-4 Application of Free Energy and Biological Processes, 170
- References, 183
- Problems, 184

Chapter 7 SOLUTIONS OF UNCHARGED MOLECULES, 187

- 7-1 Methods of Describing Concentration, 188
- 7-2 The Chemical Potential, 189
- 7-3 Ideal Solutions, 192
- 7-4 Colligative Properties, 196
- 7-5 Solution of Gases in Liquids, 209
- 7-6 Factors That Determine the Solubility of a Solid, 212
- 7-7 Partitioning—The Distribution of a Solute Between Two Immiscible Solvents, 214
- Solutions at Temperatures for which the Components Are Near the Melting Points—The Phase Rule, 217
- Nonideal Solutions, 220
- References, 228
- Problems, 228

Chapter 8 SOLUTIONS OF ELECTROLYTES, 234

- 8-1 The Ionic Theory, 234
- 8-2 Need for a Theory of Solutions of Electrolytes, 238
- 8-3 The Concept of Activity for Electrolytes, 242
- 8-4 The Debye-Hückel Theory, 248
- 8-5 Other Considerations about Ionic Strength, 261
- 8-6 Hydration of Ions, 263
- 8-7 Salting-Out Proteins, 267
- References, 269
- Problems, 269

Chapter 9 ACID-BASE EQUILIBRIA, 272

- 9-1 Dissociating Systems, 272
- 9-2 Acid-Base Mixtures, 281
- 9-3 Amino Acids and Proteins, 296
- 9-4 Metal Ion (Coordination) Complexes, 307
- References, 312
- Problems, 312

Chapter 10 ELECTROCHEMISTRY AND OXIDATION-REDUCTION REACTIONS, 315

- 10-1 Review of Basic Electrochemical Concepts, 316
- 10-2 Electrochemical Reactions and Electrochemical Cells, 316
- 10-3 Reference Electrodes, 328
- 10-4 Standard Electrode Potentials and Thermodynamic Quantities, 330
- 10-5 Concentration Cells and Ion-Selective Electrodes, 336
- 10-6 Use of Reduction Potentials to Calculate Concentration at Equilibrium, 340
- 10-7 Potentials of Biochemical Reactions, 342
- 10-8 The Terminal Oxidation Chain in Living Cells, 345
- References, 346
- Problems, 347

Chapter 11 CHEMICAL KINETICS, 349

- 11-1 The Concept of Reaction Mechanisms, 350
- 11-2 Rate Laws, Order, and Molecularity, 351
- 11-3 Rate Laws for Reactions of Different Order, and the Determination of Their Rate Constants, 354
- 11-4 Rate Equations for More Complex Reactions, 361
- 11-5 Fast Reactions, 367
- 11-6 Chain Reactions, 373
- 11-7 Effect of Temperature on the Reaction Rate, 374
- 11-8 Transition-State Theory, 376
- 11-9 Diffusion-Controlled Reactions, 379
- 11-10 Reactions Between Ions in Solution, 382
- References, 384
- Problems, 385

Chapter 12 CATALYSIS AND ENZYME KINETICS. 391

- 12-1 Catalysis, 391
- 12-2 Enzymatic Reactions, 399
- References, 411
- Problems 411

Chapter 13 SURFACES, 413

- 13-1 Surface Tension of Liquids, 413
- 13-2 Surface Films and Monolayers, 421
- 13-3 Adsorption, 434
- 13-4 Practical Aspects of Adsorption, 448
- 13-5 Micelles and the Bilayer Model of Membrane Structure, 451
- 13-6 Detergents, 455
- 13-7 Flotation, 457
- References, 459
- Problems, 460

Chapter 14 ELECTRICAL AND TRANSPORT PROPERTIES OF SURFACES AND MEMBRANES, 463

- 14-1 A Precaution about Electrical Units, 463
- 14-2 Electrical Potentials across Surfaces, 464
- 14-3 Membranes, 471
- 14-4 Effect of Ions on the Conductivity of Charged Membranes, 483
- References, 488
- Problems, 488

Chapter 15 THE PROPERTIES OF MACROMOLECULES, 490

- 15-1 Chemical and Physical Properties of Macromolecules, 490
- 15-2 Changes in the Structure of Macromolecules, 508
- 15-3 Movement of Macromolecules, 525
- 15-4 Determination of Molecular Weights, 540
- References, 559
- Problems, 560

Chapter 16 LIGAND BINDING, 564

- 16–1 Molecules with One Binding Site, 565
- 16–2 Macromolecules with Several Binding Sites, 568
- 16–3 Cooperative Binding, 572
- 16–4 Allostery, 578
- 16–5 Experimental Methods to Measure Binding, 589
- References, 594
- Problems, 594

Chapter 17 QUANTUM MECHANICS AND SPECTROSCOPY,

- 17–1 Origins of the Quantum Theory, 598
- 17–2 The New Quantum Mechanics, 606
- 17–3 Molecular Spectroscopy, 621
- 17–4 Fluorescence, 632
- 17–5 Proteins and Nucleic Acids, 639
- References, 653
- Problems, 653

Chapter 18 PHOTOCHEMISTRY, RADIATION CHEMISTRY, AND RADIOBIOLOGY, 656

- 18–1 Light, 656
- 18–2 Absorption of Light, 658
- 18–3 Scattering of Light, 666
- 18–4 Photochemical Mechanisms, 670
- 18–5 Photochemical Damage to Biological Molecules and to Living Organisms, 678
- 18–6 Ionizing Radiation, 682
- 18–7 Hit Theory, 700
- 18–8 Effect of the Environment on Radiosensitivity, 708
- References, 710
- Problems, 711
