

Contents

Preface	v
List of Tables	xv
List of Examples	xix
UNITS, UNIT ANALYSIS, AND DATA TREATMENT IN PHYSICAL CHEMISTRY	
<i>Objectives / Introduction / Units / Unit Analysis / Error Analysis / Significant Figures and Rounding / Table Reading / Plotting Linear Equations / Sources of Data and Information on Experimental Techniques / Problems / Self-Test / Additional Reading</i>	
PROPERTIES OF GASES AND THE KINETIC-MOLECULAR THEORY	
Ideal Gases	23
<i>Objectives / Boyle's Law / Gay-Lussac's Law / Combined Gas Laws and Avagadro's Hypothesis / Example / Problems / Self-Test / Additional Reading</i>	
Nonideal Gases	31
<i>Objectives / The Kinetic Molecular Model of a Gas / The Equation of State / Compressibility Factors and the Law of Corresponding States / The van der Waals Equation of State for Real Gases / Other Equations of State for Real Gases / Comparisons of Equations of State with Two Constants / Equations of State for Real Gases -- Beattie-Bridgemann / Comparison of the Redlich-Kwong and Beattie-Bridgemann Equations / Examples / Problems / Self-Test / Additional Reading</i>	
2-3 Velocity and Speed Distribution	50
<i>Objectives / Introduction / Distribution of Velocities and Speeds / Graphical Presentation of Results / Some Average Quantities / The Most Probable Velocity and Speed / Some Numerical Results / Molecular Collisions / Mean Free Path / Gas Viscosity / Numerical Values of σ, λ, Z_1, and Z_{11} / Problems / Self-Test / Additional Reading</i>	
2-4 Average Values	65
<i>Objectives / Problems / Self-Test</i>	
2-5 Effusion and Diffusion	66
<i>Objectives / Introduction / Effusion / Diffusion of Gases / Problems / Self-Test / Additional Reading</i>	
2-6 Summary	75

	THE FIRST LAW OF THERMODYNAMICS	77
	An Introduction	76
	<i>Objectives / Definitions / Notes on Notation and Defining Process Paths in Thermodynamics / First Law Calculations of Work for Ideal Gases / Relationships Involving Energy, Enthalpy, and Heat Capacity / More Examples / Problems / Self-Test / Additional Reading</i>	
	Thermodynamic Processes	100
	<i>Objectives / Introduction / Heat Capacities / The Joule-Thomson Experiment / Adiabatic Processes / Processes Involving Phase Changes / Problems / Self-Test / Additional Reading</i>	
3-3	Thermochemistry	122
	<i>Objectives / Introduction / Calorimetry / Heats of Reaction / Standard Heats of Formation / Heats of Reaction Temperature Dependence / Bond Energies / Enrichment -- Adiabatic Flame Temperature / Problems / Self-Test / Additional Reading</i>	
3-4	Enrichment -- A Rubber Band Development to Stretch your Imagination	143
3-5	Summary	145
4	THE SECOND AND THIRD LAWS OF THERMODYNAMICS	147
4-1	General Statements of the Second Law and a Discussion of Thermodynamic Cycles	149
	<i>Objectives / Limits on the Conversion of Heat Energy to Mechanical Energy / Perpetual Motion Machines / Reversibility and Irreversibility / The Carnot Cycle / The Carnot Cycle Involving a Rubber Band / Other Cycles / Example / Problems / Self-Test / Additional Reading</i>	
	Entropy	165
	<i>Objectives / Entropy / General Equations for Calculating Entropy Changes / Problems / Self-Test / Additional Reading</i>	
4-3	The Third Law and Absolute Entropies	179
	<i>Objectives / A Statement of the Third Law of Thermodynamics / Absolute Entropies / Entropy Changes in Reactions / Problems / Self-Test / Additional Reading</i>	
4-4	Summary	187
	FREE ENERGY AND CHEMICAL EQUILIBRIUM	189
	The Free Energy Functions	190
	<i>Objectives / The Gibbs and Helmholtz Functions / Conditions for Equilibrium / Further Consideration of the Properties of G and A / Fundamental Equations / Some Other Relationships / Problems / Self-Test</i>	
	Free Energy as a Function of Temperature	201
	<i>Objectives / Introduction / Standard Free Energies (Gibbs) / Free Energy as a Function of Temperature / Problems / Self-Test / Additional Reading</i>	
5-3	Chemical Equilibrium	210
	<i>Objectives / Introduction / The Pressure Dependence of ΔG / The Equilibrium Constant for a Reaction / Temperature Dependence of the Equilibrium Constant / The Chemical Potential μ / Problems / Self-Test / Additional Reading</i>	
5-4	Summary	224
6	THERMODYNAMICS OF SOLUTIONS	
6-1	The Chemical Potential and Solutions of Nonelectrolytes	
	<i>Objectives / The Chemical Potential and Equilibrium / Properties of Ideal Mixtures / The Vapor Pressure of Ideal Solutions /</i>	

	<i>The Vapor Pressures and Interactions in Nonideal Systems / Variation of Vapor Pressure with Total Pressure / Problems / Self-Test / Additional Reading</i>	
6-2	Colligative Properties: Nonelectrolytes <i>Objectives / Introduction / Vapor Pressure Lowering / Boiling Point Elevation / Freezing Point Depression / Osmotic Pressure / Problems / Self-Test / Additional Reading</i>	255
6-3	Colligative Properties: Electrolytes <i>Objectives / Introduction / The Arrhenius Theory / van't Hoff's i Factor / Conductance Measurements / The Degree of Dissociation and Equilibrium in Solution / Problems / Self-Test</i>	274
6-4	Nonideal Solutions <i>Objectives / Introduction / Definitions / The Debye-Hückel Equation / Solution Equilibria / Summary of Definitions and Symbols / Problems / Self-Test / Additional Reading</i>	288
6-5	Electromotive Force <i>Objectives / Introduction / Measurement of the EMF of Cells and Standard Cells / Electrode Potentials, Cell Reactions, Cell Notation, and Sign Conventions for EMF / Standard Electrode Potentials / Thermodynamic Values from EMF / EMF, Activities, and Equilibrium Constants / Solubility Products and Dissociation Constants from EMF Data / Miscellaneous Items / Fuel Cells / Problems / Self-Test / Additional Reading</i>	305
6-6	Summary	334
7/	INTRODUCTION TO ATOMIC MOLECULAR STRUCTURE: THE QUANTUM THEORY	337
7 1	Historical Background and the Postulates of Quantum Mechanics <i>Objectives / Introduction / Early Ideas about the Structure of Matter and Light / Spectroscopy and Atomic Structure: The Old Quantum Theory / Examples / The Postulates of Quantum Mechanics / The Schrödinger Equation / The Particle in a Box Problem / The Hydrogen Atom Problem / Problems / Self-Test / Additional Reading</i>	340
7-2	Mathematical Considerations and Solutions of the Hydrogen Atom Problem <i>Objectives / Introduction / Mathematical Preliminaries / Newton's Equations of Motion / Solution of the Equations for the Hydrogen Atom / Summary of the Allowed Quantum Numbers / Problems / Self-Test / Additional Reading</i>	366
	Atomic Structure and Properties <i>Objectives / Introduction / Allowed Quantum Numbers and Their Significance / Angular Momentum / Quantum Numbers, the Shapes of the Hydrogen Orbitals, and Probability Distributions / Electron Spin and Its Effects / Periodic Properties / Problems / Self-Test</i>	393
7-4	Approximate Methods and Atomic Spectra <i>Objectives / Introduction / The Perturbation Method / The Variation Method / Atomic Energy Levels / Atomic Absorption Spectroscopy / Problems / Self-Test / Additional Reading</i>	410
7-5	Summary	425
8	SPECTROSCOPY	427
8-1	Molecular Structure <i>Objectives / Introduction / General Comments on Bonding / Molecular Orbital Methods: The H_2^+ Ion / Molecular Orbital Methods: The H_2 Molecule / The Valence-Bond Description of H_2 / Electron Spin Functions / Correlation Diagrams for Diatomic Molecules / Hybridization / Hückel Method for Calculating Resonance Energy / Problems / Self-Test / Additional Reading</i>	431

	Rotation and Vibration of Molecules	461
	<i>Objectives / Transitions: Absorption or Emission of Electro-</i> <i>magnetic Radiation / Rotational Spectroscopy: Linear Molecules /</i> <i>Rotational Spectroscopy: Nonlinear Molecules / Dipole Moments /</i> <i>Vibrational Spectroscopy: Derivations of Energy Levels / Vibra-</i> <i>tional Wave Functions and Selection Rules / Vibrational Modes:</i> <i>Degrees of Freedom / Problems / Self-Test / Additional Reading</i>	
8-3	Rotational-Vibrational Spectroscopy	
	<i>Objectives / Introduction / Rotational Level Corrections /</i> <i>Vibrational Level Corrections / Vibration-Rotation in Molecules /</i> <i>Problems / Self-Test / Additional Reading</i>	
8-4	Other Types of Spectroscopy	493
	<i>Objectives / Introduction / Electronic Spectroscopy: Diatomic</i> <i>Molecules / Electronic Spectroscopy: Polyatomic Molecules /</i> <i>Raman Spectroscopy / Nuclear Magnetic Resonance / Lasers /</i> <i>Problems / Self-Test / Additional Reading</i>	
	STATISTICAL THERMODYNAMICS	
9-1	Definitions and the Boltzmann Distribution Function	513
	<i>Objectives / Introduction / Ensembles / Permutations and</i> <i>Probability / The Boltzmann Distribution Law / Fluctuations /</i> <i>Problems / Self-Test / Additional Reading</i>	
	Statistical Thermodynamics	
	<i>Objectives / Introduction / Entropy and Probability / General</i> <i>Relationships / Translational Motion / Rotational Motion /</i> <i>Vibrational Motion / Electronic Energy Levels / Problems /</i> <i>Self-Test / Additional Reading</i>	
	Equilibrium Constants	551
	<i>Objectives / Introduction / Chemical Equilibria / Problems /</i> <i>Self-Test / Additional Reading</i>	
1-4	Summary	557
10	CHEMICAL KINETICS	559
10-1	Experimental Techniques and Simple Rate Laws	561
	<i>Objectives / Introduction / Experimental Methods / Some</i> <i>Definitions / Simple Rate Laws / Comments / Problems / Self-</i> <i>Test / Additional Reading</i>	
10-2	Mechanisms and More Rate Laws	582
	<i>Objectives / Introduction / Use of a Physical Property Related</i> <i>to Concentration / Half-Life Methods / Comments on Mechanisms /</i> <i>The Steady State Approximation / Closing Comments / Problems /</i> <i>Self-Test / Additional Reading</i>	
10-3	Collisions and Absolute Rate Theory	599
	<i>Objectives / Introduction / Effect of Temperature on Reaction</i> <i>Rates / Thermodynamic Considerations / Collision Theory of</i> <i>Chemical Reactions / Absolute Rate Theory / Problems / Self-Test</i> <i>Additional Reading</i>	
10-4	Summary and Additional Comments	616
	COLLOID AND SURFACE CHEMISTRY	
	Definitions and Molecular Weight Methods	623
	<i>Objectives / Comparison of Colloids to Other Chemical Systems /</i> <i>Polydispersity and Molecular Weight Averages / More Terms and</i> <i>Definitions / Types of Colloids and Examples / Sedimentation,</i> <i>Centrifugation, and Diffusion / Problems / Self-Test / Additional</i> <i>Reading</i>	
11-2	Electrokinetic Phenomena	639
	<i>Objectives / Introduction / The Charged Surface / Electrokinetic</i> <i>Phenomena / Interlude / Colloid Stability and Miscellaneous</i>	

CONTENTS

	Topics / Problems / Self-Test / Additional Reading	
	Surface Chemistry	661
	Objectives / Introduction / Adsorption on Solid Surfaces / Liquids on Solids and Liquids / Surface-Active Agents (Surfactants): Soluble Materials / Surface-Active Agents: Insoluble Surface Films / Surface-Active Agents: Other Phenomena / Problems / Self-Test / Additional Reading	
11-4	Summary	683
	POLYMER CHEMISTRY AND PHYSICS	685
	Polymerization Reactions	688
	Objectives / Introduction / Monomers and Resulting Addition Polymers / Polymerization Reaction Types / Examples of Some Polymerization Techniques / Natural Macromolecules / Self-Test / Additional Reading	
12-2	Molecular Weight Methods	
	Objectives / Introduction / Methods for the Determination of M_n / Solution Viscosity / Determination of M_w : Light Scattering / Other Methods / Problems / Self-Test / Additional Reading	
12-3	Polymer Morphology	712
	Objectives / Introduction / Simple Analysis Techniques / Morphology	
12-4	Thermal Properties	724
	Objectives / Introduction / Polymer Classes / The Glass Transition Temperature / Thermal Properties and Structure / Differential Thermal Analysis and Differential Scanning Calorimetry / Additional Reading	
12-5	Mechanical and Rheological Properties	737
	Objectives / Introduction / Terms and Definitions / Linear Viscoelasticity / Nonlinear Viscoelasticity / Mechanical Behavior of Crystalline Polymers / crazing and Fracturing / Fabrication Effects and Polymer Engineering / Self-Test	
12-6	Summary	752
*13	PHASE EQUILIBRIA	753
13-1	Definitions and One-Component Systems	755
	Objectives / Definitions / Gibbs Phase Rule / Thermodynamic Considerations / One-Component Systems / Problems / Self-Test / Additional Reading	
13-2	Binary Solid-Liquid Diagrams	767
	Objectives / Introduction / Simple Eutectic Systems / Compound Formation: Congruently Melting / Compound Formation: Incongruently Melting / Solid Solutions and Alloys / Comments / Problems / Self-Test / Additional Reading	
13-3	Binary Liquid-Liquid and Liquid-Vapor Systems	780
	Objectives / Introduction / Liquid-Liquid Equilibria / Liquid-Vapor Equilibria: Miscible Liquids / Immiscible and Partially Miscible Liquids / Problems / Self-Test / Additional Reading	
13-4	Ternary and More Complex Binary Diagrams	791
	Objectives / Introduction / Ternary Phase Diagrams / More Complex Binary and Ternary Systems / Problems / Self-Test / Additional Reading	
14	THE LIQUID AND SOLID STATES	803
14-1	General Properties	806
	Objectives / Introduction / A Few Comments on Structural Differences / Review of Equations and Terms / Surface Tension /	

	<i>Liquid Viscosity / Interactions in Liquids / Problems / Self-Test / Additional Reading</i>	
14-2	Electrical and Magnetic Properties <i>Objectives / Introduction / Basic Electrostatics and Units of Interest / Dipole Moment, Polarization, and Refractive Index / Magnetic Properties / Problems / Self-Test / Additional Reading</i>	829
14-3	Bonding in Solids <i>Objectives / Preliminary Remarks / Cohesive Energy: The Bond Model / The Born-Haber Cycle / The Band Model / Defects in Solids / Problems / Self-Test / Additional Reading</i>	845
14-4	Symmetry and Crystal Lattices <i>Objectives / Introduction / Symmetry / Point Groups, Crystal Systems, and Classes / Crystal Planes: Miller Indices / Problems / Self-Test / Additional Reading</i>	855
14-5	Crystal Structure and X-Ray Diffraction <i>Objectives / Introduction / Close-Packed Spheres and Examples of Common Structures / Bragg's X-Ray Diffraction Law / Lattice Types and Unit Cell Dimensions from X-Ray Diffraction / Atoms per Unit Cell and Allowed Diffractions / Powder Diffraction: Crystal "Fingerprints" / Problems / Self-Test / Additional Reading</i>	865
14-6	Summary	884
	Appendix A: Notes to the Instructor	885
	Appendix B: Physical Constants and Conversion Factors	891
	Appendix C: Problem Solutions	893
	Appendix D: Some Common Integrals	1003
	Index	1005
	Index of Examples	1031
