

CONTENTS

Preface xv

1 THERMODYNAMICS 1

1.1	Physical Chemistry	-
1.2	Thermodynamics	2
1.3	Temperature	5
1.4	The Mole	9
1.5	Ideal Gases	11
1.6	Differential Calculus	18
1.7	Equations of State	23
1.8	Study Suggestions	26
1.9	Summary	27

2 THE FIRST LAW OF THERMODYNAMICS 30

2.1	Integral Calculus	30
2.2	Classical Mechanics	33
2.3	<i>P-V</i> Work	38
2.4	Line Integrals	40
2.5	Heat	42
2.6	The First Law of Thermodynamics	43
2.7	State Functions and Line Integrals	48
2.8	Alternative Formulation of the First Law	50
2.9	Enthalpy	51
2.10	Heat Capacities	57

2.11	The Joule and Joule-Thomson Experiments	54
2.12	Perfect Gases and the First Law	57
2.13	Calculation of First-Law Quantities	60
2.14	Logarithms	63
2.15	Problem Solving	64

3 THE SECOND LAW OF THERMODYNAMICS 68

3.1	The Second Law of Thermodynamics	68
3.2	Heat Engines	70
3.3	The Thermodynamic Temperature Scale	76
3.4	Entropy	77
3.5	Calculation of Entropy Changes	80
3.6	Entropy, Reversibility, and Irreversibility	85
3.7	What Is Entropy?	88
3.8	Entropy, Time, and Cosmology	94

MATERIAL EQUILIBRIUM 100

4.1	Material Equilibrium	100
4.2	Thermodynamic Properties of a Nonequilibrium System	101
4.3	Entropy and Equilibrium	102
4.4	The Gibbs and Helmholtz Functions	104
4.5	Thermodynamic Relations for a System of Constant Composition	107
4.6	Chemical Potentials	115
4.7	Phase Equilibrium	119
4.8	Reaction Equilibrium	121
4.9	Entropy and Life	123

CONVENTIONAL VALUES OF THERMODYNAMIC STATE FUNCTIONS 126

5.1	Standard States	126
5.2	Conventional Enthalpies	127
5.3	Enthalpy of Reaction	130
5.4	Temperature Dependence of Reaction Heats	134
5.5	Conventional Entropies and the Third Law	136
5.6	Conventional Gibbs Energies	141
5.7	Estimation of Thermodynamic Properties	144
5.8	The Unattainability of Absolute Zero	146

REACTION EQUILIBRIUM IN IDEAL GAS MIXTURES

149

6.1	Chemical Potentials in an Ideal Gas Mixture	149
6.2	Ideal-Gas Reaction Equilibrium	151
6.3	Temperature Dependence of the Equilibrium Constant	156
6.4	Ideal-Gas Equilibrium Calculations	157
6.5	Shifts in Ideal-Gas Reaction Equilibria	161

7

ONE-COMPONENT PHASE EQUILIBRIUM

166

7.1	The Phase Rule	166
7.2	One-Component Phase Equilibrium	169
7.3	The Clapeyron Equation	173
7.4	Solid-Solid Phase Transitions	176
7.5	Higher-Order Phase Transitions	178

8

REAL GASES

182

8.1	Compressibility Factors	182
8.2	Real-Gas Equations of State	182
8.3	Condensation	184
8.4	Critical Data and Equations of State	186
8.5	The Law of Corresponding States	188
8.6	Standard-State Thermodynamic Properties of Gases	191
8.7	Taylor Series	192

SOLUTIONS

196

9.1	Solutions	196
9.2	Partial Molar Quantities	197
9.3	The Gibbs-Duhem Equation	202
9.4	Determination of Partial Molar Quantities	203
9.5	Ideal Solutions	207
9.6	Thermodynamic Properties of Ideal Solutions	210
9.7	Ideally Dilute Solutions	214
9.8	Thermodynamic Properties of Ideally Dilute Solutions	216
9.9	Reaction Equilibrium in Ideal and Ideally Dilute Solutions	222

NONIDEAL MIXTURES

227

10.1	Activities and Activity Coefficients	227
10.2	Determination of Activities and Activity Coefficients	230

10.3	Activity Coefficients on the Molality and Concentration Scales	234
10.4	Solutions of Electrolytes	237
10.5	Determination of Electrolyte Activity Coefficients	242
10.6	The Debye-Hückel Theory of Electrolyte Solutions	244
10.7	Ionic Association	248
10.8	Conventional Thermodynamic Properties of Solution Components	250
10.9	Nonideal Gas Mixtures	255

11 REACTION EQUILIBRIUM IN NONIDEAL SYSTEMS 261

11.1	The Activity Equilibrium Constant	261
11.2	Reaction Equilibrium in Nonelectrolyte Solutions	262
11.3	Reaction Equilibrium in Electrolyte Solutions	263
11.4	Reaction Equilibria Involving Pure Solids or Pure Liquids	269
11.5	Reaction Equilibrium in Nonideal Gas Mixtures	272
11.6	Temperature and Pressure Dependence of the Equilibrium Constant	273
11.7	Summary of Standard States	274
11.8	Coupled Reactions	274
11.9	Gibbs Energy Change for a Reaction	275

12 MULTICOMPONENT PHASE EQUILIBRIUM 279

12.1	Colligative Properties	279
12.2	Vapor-Pressure Lowering	279
12.3	Freezing-Point Depression and Boiling-Point Elevation	280
12.4	Osmotic Pressure	284
12.5	Two-Component Phase Diagrams	290
12.6	Two-Component Liquid-Vapor Equilibrium	290
12.7	Two-Component Liquid-Liquid Equilibrium	298
12.8	Two-Component Solid-Liquid Equilibrium	300
12.9	Structure of Phase Diagrams	308
12.10	Solubility	309
12.11	Three-Component Systems	312

13 SURFACE CHEMISTRY 319

13.1	The Interphase Region	319
13.2	Curved Interfaces	323
13.3	Thermodynamics of Capillary Systems	326
13.4	Surface Films on Liquids	334
13.5	Adsorption of Gases on Solids	336
13.6	Colloids	341
13.7	Biological Membranes	345

	ELECTROCHEMICAL SYSTEMS	350
14.1	Electrostatics	350
14.2	Dipole Moments and Polarization	353
14.3	Electrochemical Systems	358
14.4	Thermodynamics of Electrochemical Systems	360
14.5	Galvanic Cells	363
14.6	Types of Reversible Electrodes	370
14.7	Thermodynamics of Galvanic Cells	373
14.8	Standard Electrode Potentials	377
14.9	Classification of Galvanic Cells	381
14.10	Liquid-Junction Potentials	382
14.11	Applications of EMF Measurements	383
14.12	Batteries	387
14.13	Ion-Selective Membrane Electrodes	388
14.14	Membrane Equilibrium	391
14.15	The Electrical Double Layer	392
14.16	Bioelectrochemistry	393
14.17	Electrochemistry	396

15	KINETIC-MOLECULAR THEORY OF GASES	400
15.1	Kinetic-Molecular Theory of Gases	400
15.2	Pressure of an Ideal Gas	401
15.3	Temperature	404
15.4	Distribution of Molecular Speeds in an Ideal Gas	406
15.5	Applications of the Maxwell Distribution	414
15.6	Collisions with a Wall and Effusion	417
15.7	Molecular Collisions and Mean Free Path	419
15.8	The Barometric Formula	423
15.9	The Boltzmann Distribution Law	424
15.10	Heat Capacities of Polyatomic Molecules	424

	TRANSPORT PROCESSES	429
--	----------------------------	------------

16.1	Kinetics	429
16.2	Thermal Conductivity	430
16.3	Viscosity	435
16.4	Diffusion and Sedimentation	442
16.5	Electrical Conductivity	452
16.6	Electrical Conductivity of Electrolyte Solutions	454
16.7	Fluxes and Generalized Forces	469

17	REACTION KINETICS	
17.1	Reaction Kinetics	473
17.2	Measurement of Reaction Rates	477
17.3	Integration of Rate Laws	481
17.4	Determination of the Rate Law	488
17.5	Rate Laws and Equilibrium Constants for Elementary Reactions	491
17.6	Reaction Mechanisms	492
17.7	Temperature Dependence of Rate Constants	498
17.8	Relation between Rate Constants and Equilibrium Constants for Complex Reactions	502
17.9	The Rate Law in Nonideal Systems	503
17.10	Unimolecular Reactions	504
17.11	Trimolecular Reactions	507
17.12	Chain Reactions	508
17.13	Reactions in Liquid Solutions	511
17.14	Catalysis	516
17.15	Enzyme Catalysis	518
17.16	Heterogeneous Catalysis	521
17.17	Nuclear Reactions	524
18	QUANTUM MECHANICS	534
18.1	Blackbody Radiation and Energy Quantization	534
18.2	The Photoelectric Effect and Photons	537
18.3	The Bohr Theory of the Hydrogen Atom	539
18.4	The de Broglie Hypothesis	540
18.5	The Uncertainty Principle	542
18.6	Quantum Mechanics	544
18.7	The Time-independent Schrödinger Equation	548
18.8	The Particle in a One-dimensional Box	550
18.9	The Particle in a Three-dimensional Box	554
18.10	Degeneracy	555
18.11	Operators	556
18.12	The One-dimensional Harmonic Oscillator	559
18.13	Two-Particle Problems	562
18.14	The Two-Particle Rigid Rotor	563
18.15	Approximation Methods	564
19	ATOMIC STRUCTURE	568
19.1	Units	568
19.2	Historical Background	569
19.3	The Hydrogen Atom	570
19.4	Electron Spin	579
19.5	The Helium Atom and the Pauli Principle	580
19.6	Many-Electron Atoms and the Periodic Table	588
19.7	Hartree-Fock and Configuration-Interaction Wave Functions	593

20

MOLECULAR ELECTRONIC STRUCTURE	597
20.1 Chemical Bonds	597
20.2 The Born–Oppenheimer Approximation	601
20.3 The Hydrogen Molecule Ion	605
20.4 The Simple MO Method for Diatomic Molecules	610
20.5 SCF, Hartree–Fock, and CI Wave Functions	616
20.6 The MO Treatment of Polyatomic Molecules	618
20.7 Calculation of Molecular Properties	627
20.8 The VSEPR Method	629
20.9 Semiempirical Methods	632
20.10 The Valence-Bond Method	635
20.11 Future Prospects	637

21

SPECTROSCOPY AND PHOTOCHEMISTRY	640
21.1 Electromagnetic Radiation	640
21.2 Spectroscopy	643
21.3 Rotation and Vibration of Diatomic Molecules	646
21.4 Molecular Symmetry	656
21.5 Rotation of Polyatomic Molecules	658
21.6 Microwave Spectroscopy	661
21.7 Vibration of Polyatomic Molecules	663
21.8 Infrared Spectroscopy	665
21.9 Raman Spectroscopy	667
21.10 Electronic Spectroscopy	668
21.11 Nuclear-Magnetic-Resonance Spectroscopy	671
21.12 Electron-Spin-Resonance Spectroscopy	680
21.13 Photochemistry	681

22

STATISTICAL MECHANICS	690
22.1 Statistical Mechanics	690
22.2 The Canonical Ensemble	691
22.3 Canonical Partition Function for a System of Noninteracting Particles	700
22.4 Canonical Partition Function of a Pure Ideal Gas	704
22.5 The Boltzmann Distribution Law for Noninteracting Molecules	706
22.6 Statistical Thermodynamics of Ideal Diatomic and Monatomic Gases	711
22.7 Statistical Thermodynamics of Ideal Polyatomic Gases	718
22.8 Ideal-Gas Thermodynamic Properties and Equilibrium Constants	721
22.9 Entropy and the Third Law of Thermodynamics	724
22.10 Intermolecular Forces	727
22.11 Statistical Mechanics of Fluids	733

23	THEORIES OF REACTION RATES	742
23.1	Hard-Sphere Collision Theory of Gas-Phase Reactions	742
23.2	Potential-Energy Surfaces	745
23.3	Molecular Reaction Dynamics	754
23.4	Activated-Complex Theory for Ideal-Gas Reactions	758
23.5	Thermodynamic Formulation of ACT	767
23.6	Unimolecular Reactions	769
23.7	Trimolecular Reactions	772
23.8	Reactions in Solution	772
24	SOLIDS AND LIQUIDS	779
24.1	Solids and Liquids	779
24.2	Chemical Bonding in Solids	780
24.3	Cohesive Energies of Solids	781
24.4	Theoretical Calculation of Cohesive Energies	782
24.5	Interatomic Distances in Crystals	785
24.6	Crystal Structures	787
24.7	Examples of Crystal Structures	792
24.8	Determination of Crystal Structures	797
24.9	Band Theory of Solids	802
24.10	Statistical Mechanics of Crystals	804
24.11	Defects in Solids	809
24.12	Liquids	810
	Bibliography	814
	Appendix	816
	Answers to Selected Problems	819
	Index	823
