

CONTENTS

	PAGE
<i>Chapter 1. THE THEORY OF RESONANCE</i>	1
1-1 The Structural Theory	1
1-2 The Theories of Intermediate Stages, Mesomerism, and Resonance	2
1-3 Nomenclature	5
1-4 The Conditions for Resonance	6
1-5 The Mechanical Analogy	18
1-6 The Mathematical Basis of Resonance	25
1-7 Conclusion	28
<i>Chapter 2. THE NATURE OF VALENCE</i>	29
2-1 Valence and Energy	29
2-2 The Ionic Bond	29
2-3 Types of Covalent Bond	31
2-4 The One-Electron Bond	32
2-5 The Three-Electron Bond	37
2-6 The Two-Electron Bond	38
2-7 Resonance between Ionic and Covalent Bonds	42
2-8 The Hydrogen Bond	44
<i>Chapter 3. RESONANCE ENERGY</i>	52
3-1 Introductory Remarks	52
3-2 Resonance Energies from Heats of Hydrogenation	54
3-3 Resonance Energies from Heats of Combustion	62
3-4 Resonance Energies from Bond Energies	75
3-5 Theoretical Calculations of Resonance Energies of Hydrocarbons	79
3-6 The Effect of Resonance between Ionic and Covalent Structures upon Bond Energies	82
3-7 Resonance Energy due to Hyperconjugation	85
<i>Chapter 4. STERIC EFFECTS OF RESONANCE</i>	88
4-1 Molecular Symmetry	88
4-2 Coplanarity	92
4-3 Interatomic Distances	95
4-4 Per Cent Double-Bond Characters and Fractional Bond Orders	106
4-5 Miscellaneous Applications	111
<i>Chapter 5. RESONANCE AND DIPOLE MOMENTS</i>	114
5-1 General Discussion	114
5-2 The Origin of Dipole Moments	118
5-3 Polarization	123
5-4 Dipole Moments and Resonance	126
5-5 Steric Inhibition of Resonance	136
5-6 Dipole Moments and Free Rotation	138

	PAGE
<i>Chapter 6. RESONANCE AND MOLECULAR SPECTRA</i>	143
6-1 Types of Spectra	143
6-2 Ground and Excited Electronic States	146
6-3 Spectra of Organic Substances	148
6-4 Steric Inhibition of Resonance and Spectra	160
6-5 Force Constants	162
<i>Chapter 7. RESONANCE AND CHEMICAL EQUILIBRIUM</i>	164
7-1 General Discussion	164
7-2 Acid Strengths	167
7-3 Base Strengths	177
7-4 Steric Inhibition of Resonance in Acids and Bases	185
7-5 Addition to Double Bonds	190
7-6 Free Radicals	192
7-7 Diradicals	202
7-8 Tautomerism	206
<i>Chapter 8. RESONANCE AND CHEMICAL REACTION</i>	216
8-1 The Activated Complex and the Rates of Reaction	216
8-2 Reactions of Resonating Molecules	221
8-3 General Formulation of the Theory	224
8-4 Symbols for Describing Resonance	229
8-5 "Normal" Addition of Acids to Carbon-Carbon Double Bonds	232
8-6 "Abnormal" Addition of Acids to Carbon-Carbon Double Bonds	238
8-7 Addition of Halogens to Carbon-Carbon Double Bonds. Related Reactions	241
8-8 Addition to Carbon-Oxygen Double Bonds	243
8-9 Addition to Conjugated Systems	245
8-10 Polymerization of Olefines	251
8-11 Orientation of Substituents to Aromatic Systems	256
8-12 Steric Inhibition of Resonance and Rates of Reaction	272
8-13 Molecular Rearrangements	279
<i>Appendix. Interatomic Distances in Organic Molecules</i>	286
<i>Author Index</i>	297
<i>Subject Index</i>	303
