Editors' **Foreword**

Preface

vii

Chapter

ELECTRON CONFIGURATION

- | | | |
|------------|--|-----------|
| 1-1 | Classification of Elements by Electron Configuration | 1 |
| 1-2 | Atomic Energy Levels | 5 |
| 1-3 | The 8-electron Rule in Molecules Containing p Elements | 18 |
| 1-4 | The 18-electron Rule in Molecules Containing d Elements | 25 |
| | References | 31 |

Chapter

2 ATOMIC RADIUS

34

- | | | |
|------------|---------------------------------------|-----------|
| 2-1 | Ionic and van der Waals Radius | 35 |
| 2-2 | Covalent and Metallic Radius | 39 |
| | References | 42 |

xi

**Chapter 4 POLARIZATION AND SOME
THERMODYNAMIC PROPERTIES**

- 4-1 Polarizability
- 4-2 Polarizing Strength
- 4-3 Boiling Point and Polarizability
 - General
 - Scope
 - Exposure of Atoms
 - Results
- 4-4 Energy and Entropy of Atomization
 - References

Chapter 5 ACIDITY AND BASICITY

- 5-1 Hydro-Acids
- 5-2 Hydroxy-Acids
- 5-3 Hydrated Cations
 - References

**Chapter 6 OXIDATION STATE AND
REDOX POTENTIAL**

- 6-1 General
- 6-2 The d and f Elements
- 6-3 The s and p Elements
- 6-4 Two Exotic "Elements"
- 6-5 Redox Kinetics
 - References

Chapter 7

- 7 Introduction
- 7 Elements
- 7 Binary Compounds

8-2	Salts with Minimum Polarization	
8-3	Oxy-Anions: The Effect of Ionic Acidity and Basicity	132
8-4	Other Ligands: Effects Related to Polarization and Covalency	137
8-5	Some Regularities Among the Cations	145
	References	147
