

CONTENTS

Preface	v
i. Objectives, Methods, and Scope	1
ii. Interactions of Material Systems .	6
iii. States of Material Systems	18
iv. The First Law of Thermodynamics	31
v. Thermochemistry	44
vi. Properties of Gases	62
vii. The Kinetic Theory of Gases	82
viii. The Crystalline State	103
ix. Energy and Heat Capacity of Gases and Crystals	138
x. The Liquid State	160
xi. Atomic Structure	171
xii. Molecular Structure	191
xiii. Radioactivity and Nuclear Reaction	
xiv. Solutions	228
xv. The Second Law of Thermodynamics	249
xvi. Phase Equilibria in One-component Systems	272
xvii. Escaping Tendency	
xviii. Vapor Pressure and Related Properties of Ideal Solutions and Dilute Solutions	295
xix. Phase Equilibria in Two-component Systems	315
xx. Phase Equilibria in Three-component Systems	334
xxi. Equilibrium in Chemical Reactions	346
xxii. Chemical Kinetics	381 <i>A</i>

xxv. Interactions of Light with Matter	467
xxvi. Surface Phenomena	
Index	497
