

# CONTENTS

PREFACE XI

## 1 PURE GASES 1

1.1 Introduction 1.2 Mechanical Energy 1.3 Energy of a Perfect Gas 1.4 Equation of State of Perfect Gas 1.5 Gas Temperature Scale 1.6 Molecular Weight 1.7 Molecular Velocity 1.8 Mean Free Path 1.9 Effusion and Diffusion 1.10 Viscosity 1.11 Collisions 1.12 Equations of State of Real Gas 1.13 Critical State 1.14 Principle of Corresponding States 1.15 Summary

## 2 ENERGY AND ENTHALPY 58

2.1 Introduction 2.2 Work 2.3 Functions of State 2.4 The First Law of Thermodynamics 2.5 Adiabatic Processes 2.6 Processes Without Work 2.7 Processes at Constant Pressure 2.8 Heat Capacity 2.9 Thermodynamic Properties of a Perfect Gas 2.10 Heat Capacities of Gases 2.11 Reversible Isothermal Work 2.12 Adiabatic Processes of a Perfect Gas 2.13 Adiabatic Processes of a Real Gas 2.14 Liquefaction of Gases by Adiabatic Expansion 2.15 Physical Processes 2.16 Summary

## 3 THERMOCHEMISTRY 10

3.1 Introduction 3.2 Heat of Reaction 3.3 Standard States 3.4 Heat of Formation 3.5 Heat of Reaction at Any Temperature 3.6 Final Temperature of an Adiabatic Reaction 3.7 Adiabatic Calorimetry 3.8 Summary

## ENTROPY

4.1 Introduction 4.2 Reversible Processes 4.3 The Second Law of Thermodynamics 4.4 Adiabatic Processes 4.5 Heat Engines 4.6 Refrigerator 4.7 Heat Pump 4.8 The Fundamental Relation of Thermodynamics 4.9 Reversible Work in a Cyclic Process 4.10 Reversible Processes at Constant Temperature and Pressure 4.11 Entropy as a Function of Temperature 4.12 The Most Probable Distribution of Energies 4.13 Equipartition of Energy 4.14 Real Heat Capacities 4.15 The Third Law of Thermodynamics 4.16 The Approach to Absolute Zero 4.17 Standard Entropies 4.18 Summary

## FREE ENERGY

5.1 Introduction 5.2 Definitions of Free Energies 5.3 Some Useful Equalities 5.4 Thermodynamic Equation of State 5.5 Energy of a Real Gas 5.6 Enthalpy of a Real Gas 5.7 Entropy Changes 5.8 Conditions for Equilibrium and Spontaneity 5.9 Reversible Work 5.10 Processes at Constant Temperature 5.11 Free Energy as a Function of Temperature 5.12 Free Energy as a Function of Pressure 5.13 Fugacity 5.14 Summary

## 6 CHEMICAL POTENTIAL

6.1 Introduction 6.2 Vapor Pressure as a Function of Pressure 6.3 Equilibrium of One Component in Two Phases 6.4 Vaporization and Sublimation 6.5 Solutions 6.6 Homogeneous Functions 6.7 Chemical Potential 6.8 Specific Conditions for Thermodynamic Equilibrium 6.9 Surface Free Energy 6.10 Vapor Pressure of Small Drops 6.11 Monolayers 6.12 Film Pressure 6.13 Summary

## 7 THE PHASE RULE

7.1 Introduction 7.2 Derivation of the Phase Rule 7.3 Systems of One Component 7.4 Gaseous Solutions 7.5 Entropy of Mixing 7.6 Ideal Solutions 7.7 Two Volatile Components 7.8 Fractional Separations 7.9 Immiscible Liquids 7.10 Immiscible Solids 7.11 Partial Miscibility 7.12 Lever Law 7.13 Three-Component Systems 7.14 Distribution Coefficient 7.15 Gas Chromatography 7.16 Summary

## COLLIGATIVE PROPERTIES 337

- 8.1 Introduction 8.2 Vapor Pressure Lowering 8.3 Boiling Point Elevation 8.4 Freezing Point Depression 8.5 Osmosis 8.6 Osmotic and Activity Coefficients 8.7 Ionization 8.8 Electrostatic Potential in Dilute Electrolyte Solution 8.9 Activity Coefficients of Electrolytes 8.10 Summary

## 9 CHEMICAL EQUILIBRIUM 374

- 9.1 Introduction 9.2 The Equilibrium Constant 9.3 Dissociation 9.4 Standard Free Energy 9.5 Free Energy Changes at Any Temperature 9.6 Free Energy from Calorimetric Data 9.7 Summary

## 10 CHEMICAL KINETICS 412

- 10.1 Introduction 10.2 Measurement of Rate 10.3 Order of Reaction 10.4 Method of Initial Rates 10.5 First Order Reactions 10.6 Unimolecular Decomposition 10.7 Second Order Reactions 10.8 Recombination 10.9 Influence of Temperature 10.10 Consecutive and Competing Reactions 10.11 Analysis of a Mechanism 10.12 Chain Reactions 10.13 Reaction Rates in Solution 10.14 Catalysis 10.15 Summary

## MIGRATION OF CHARGED SPECIES 482

- 11.1 Introduction 11.2 Laws of Electricity 11.3 Electrolysis 11.4 Transference Numbers from Concentration Changes at Electrodes 11.5 Transference Numbers from Position of Moving Boundary 11.6 Specific Conductance 11.7 Equivalent Conductance 11.8 Weak and Strong Electrolytes 11.9 Uses of Conductivity 11.10 Distribution of Ions Near a Charged Surface 11.11 Properties of Colloids 11.12 Electrokinetic Potential 11.13 Electrophoresis 11.14 Summary

## 12 ELECTROCHEMICAL CELLS 533

- 12.1 Introduction 12.2 Measurement of Potential Difference 12.3 Chemical Potential and Electric Work 12.4 An Electrochemical Cell 12.5 Entropy and Enthalpy Changes from Potential Differences 12.6 Equilibrium Constants from Potential Differences 12.7 Various Cells 12.8 Standard

Electrode Potentials 12.9 Activity Coefficients from Cell Potentials 12.10 Ion Product of Water and pH 12.11 Concentration Cells 12.12 Junction Potential 12.13 Glass Electrode 12.14 Electrode Processes 12.15 Electrocapillarity 12.16 Polarography 12.17 Summary

## 13 QUANTA, WAVES, AND PARTICLES

599

13.1 Introduction 13.2 Energy Quanta 13.3 Photoelectric Effect 13.4 Hydrogen Atom 13.5 Wavelength of a Particle 13.6 Uncertainty Principle 13.7 Stationary Energy States 13.8 Free Particle 13.9 Particle in Box 13.10 Tunnel Effect 13.11 Qualitative Wave Functions 13.12 Summary

## 14 QUANTUM MECHANICS

14.1 Introduction 14.2 Continuity of Entropy 14.3 Action and All Paths 14.4 Wave Mechanics 14.5 Harmonic Oscillator 14.6 Hydrogen Atom 14.7 Operators and Eigenvalues 14.8 Angular Momentum 14.9 Exclusion Principle 14.10 Atomic Spectra 14.11 Variation Method 14.12 Virial Theorem 14.13 Perturbation Method 14.14 Fundamental Particles 14.15 Nuclear Structure 14.16 Mass Spectroscopy 14.17 Summary

## 15 MOLECULAR STRUCTURE

15.1 Introduction 15.2 Hydrogen Molecule Ion 15.3 Hydrogen Molecule 15.4 Comparison of Valence-Bond and Molecular-Orbital Methods 15.5 Correlation Diagrams of Diatomic Molecules 15.6 Dissociation Energy 15.7 Bond Energy 15.8 Rotational Energy 15.9 Infrared and Raman Spectra 15.10 Pure Rotational Spectra 15.11 Electron Diffraction 15.12 Magnetic Resonance Spectroscopy 15.13 Optical Rotation 15.14 Hybridization 15.15 Bond Lengths 15.16 Resonance Energy 15.17 Hydrogen Bonds 15.18 Summary

## 16 CRYSTALS

807

16.1 Introduction 16.2 Crystalline Properties 16.3 Law of Rational Indexes 16.4 Lattices 16.5 Space Lattices 16.6 Powder Diffraction Equation 16.7 Extinct Reflections 16.8 Calculation of Density 16.9 Diffraction Apparatus 16.10 X-ray Analysis 16.11 Crystallite Size 16.12 Dislocations 16.13 Body-Centered Cubic Structures

**16.14** CsCl Structure **16.15** Close-Packed Spheres  
**16.16** Structures Based on Close-Packing **16.17** Common  
 Structural Types **16.18** Lattice Energy **16.19** Band Theory  
 and Zones **16.20** Superlattices **16.21** Semi-conductors  
**16.22** Chemical Potential of Lattice Electrons **16.23** Vacancies  
 and Interstitial Ions **16.24** Action of Light on Solids  
**16.25** Transference in Solids **16.26** Reactions of Solids  
**16.27** Noncrystalline Structures **16.28** Summary

## 17 STATISTICAL MECHANICS

**17.1** Introduction **17.2** Entropy Postulate **17.3** Identification  
 of Thermodynamic Functions **17.4** Partition Function  
**17.5** Perfect Monatomic Gas **17.6** Perfect Diatomic Gas  
**17.7** Perfect Polyatomic Gas **17.8** Dipoles in a Static Field  
**17.9** Molar Polarization **17.10** Magnetic Properties  
**17.11** Crystals and the Third Law **17.12** Degenerate Electron  
 Gas **17.13** Radiation **17.14** Summary

## 18 REACTION RATE THEORY

**18.1** Introduction **18.2** Photochemistry **18.3** Collision  
 Theory **18.4** Molecular Beams **18.5** Potential Energy  
 Surfaces **18.6** Transition-State Theory **18.7** Activated  
 Complex **18.8** Isotope Effect **18.9** Wave Packet Theory  
**18.10** Summary

APPENDIXES	977
INDEX	991
