

# Contents

**Preface** . . . . . **v**

**1. Properties of Gases** . . . . . **1**

1-1. Boyle's Law. 1-2. Charles', or Gay-Lueaac's, Law. 1-3. The Combined Gas Laws. 1-4. Avogadro's Hypothesis and the General Gas Law. 1-5. The Gas Constant. 1-6. Dalton's Law of Partial Pressures. 1-7. Graham's Law of Effusion. 1-8. The Viscosity of Gases. 1-9. The Nonideal Behavior of Gases. 1-10. Condensation of Gases and the Critical Point. 1-11. Law of Corresponding States.

**2. The Kinetic-molecular Theory of Gases** . . . . . **21**

2-1. The Kinetic-molecular Gas Model. 2-2. The Pressure of a Gas. 2-3. Molecular Velocities, Kinetic Energies, and Temperature. 2-4. Numerical Values for Molecular Energies and Velocities. 2-5. The Mean Free Path, Collision Diameter, and Collision Number. 2-6. The Kinetic Theory of Gas Viscosity. 2-7. Numerical Values of Collision Properties. 2-8. Degrees of Freedom. 2-9. Distribution of Molecular Velocities. 2-10. Theory of Nonideal Behavior—van der Waals' Equation. 2-11. Van der Waals' Equation and the Critical Point. 2-12. Van der Waals' Equation and the Law of Corresponding States.

**3. Introduction to Atomic and Molecular Structure** . . . . . **48**

3-1. The Electron. 3-2. The Atomic Theories of Thomson and Rutherford. 3-3. The Wave Nature of Light. 3-4. The Corpuscular Nature of Light. 3-5. Planck's Quantum Theory of Radiation. 3-6. The Spectroscopic Method. 3-7. Atomic Spectra. 3-8. The Bohr Atom. 3-9. Wave Mechanics and the Schrödinger Equation. 3-10. Examples of the "Particle-in-a-box" Calculation. 3-11. The Energy Levels for a Particle in a Threedimensional Box. 3-12. The Boltzman Distribution. \*3-13. Identification of the Boltzmann-distribution Temperature Scale with That of the Ideal Gas. 3-14. Types of Molecular Energies. 3-15. Quantum Interpretation of Translational-energy Distribution. 3-16. Rotational Energy. 3-17. Vibrational Energy. 3-18. Thermal Energies.

4. **The First Law of Thermodynamics** . . . . . 86

4-1. Thermodynamics. 4-2. The Equivalence of Heat and Work. 4-3. Energy and the Conservation of Energy. 4-4. The First Law of Thermodynamics. 4-5. Dependence of  $q$  and  $w$  on the Reaction Path. 4-6. Work in **Chemical Processes**. 4-7. The Internal Energy of an Ideal Gas. 4-8. Illustrations of the Equation  $\Delta E = q - w$ . 4-9. **Constant-volume Processes**. 4-10. Constant-pressure Processes and Enthalpy. 4-11. The **Joule-Thomson Coefficient** for Real Gases. 4-12. Adiabatic Processes. 4-13. Molecular Interpretation of the Internal Energy and Enthalpy. 4-14. The **Vibrational Contribution** to  $E - E_0$ . 4-15. Calculation of the Internal-energy and Enthalpy Functions. 4-16. Molecular Interpretation of  $C_v$  and  $C_p$ .

5. **Thermochemistry** . . . . . 113

5-1. Measurements of Heats of Reaction. 5-2. Internal-energy and Enthalpy **Changes** in Chemical Reactions. 5-3. Relation between  $\Delta E$  and  $\Delta H$ . 5-4. **Thermochemical Equations**. 5-5. Indirect Determination of Heats of Reaction. 5-6. **Standard Heats of Formation**. 5-7. Temperature Dependence of Heats of **Reaction**. 5-8. Heats of Reaction and the Molecular Model. 5-9. Bond Energies.

6. **Entropy and the Second and Third Laws of Thermodynamics** . . . . . 130

6-1. General Statements of the Second Law of Thermodynamics. 6-2. The **Carnot Cycle**. 6-3. The **Efficiency** of the Transformation of Heat into Work. 6-4. Entropy. 6-5. Entropy Changes in Reversible Processes. 6-6. Entropy **Changes** in Irreversible Processes. 6-7. The Molecular Basis of Entropy. 6-8. The **Unattainability** of Absolute Zero. 6-9. Entropy and the Third Law of Thermodynamics.

7. **Free Energy and Chemical Equilibria** . . . . . 155

7-1. The Free-energy Function. 7-2. Some Free-energy Calculations. 7-3. **Standard Free Energies**. 7-4. The Dependence of Free Energy on Pressure and Temperature. 7-5. Quantitative Relation of  $\Delta G$  and the Equilibrium Constant. 7-6. Temperature Dependence of the Free Energy of a Reaction and the Equilibrium Constant. 7-7. Molecular **Interpretation** of Equilibria. 7-8. The Partition Function. 7-9. Molecular Interpretation of Free Energy. 7-10. Molecular Interpretation of Entropy. 7-11. Molecular **Interpretation** of the Third Law. \*7-12. The Translational Entropy of an Ideal Gas. \*7-13. The Rotational Entropy of the Diatomic Molecules of an Ideal Gas. \*7-14. The Vibrational Entropy of the Diatomic Molecules of an Ideal Gas.

8. **Introduction to the Theory of Chemical Bonding** . . . . . 185

8-1. The Solution of the **Schrödinger** Equation for the Hydrogen Atom. 8-2. The Hydrogen-atom Wave **Functions**. 8-3. Electron Spin and the Pauli Exclusion Principle. 8-4. Electronic Structure and the Periodic Table. 8-5. **Relation** of Electronic Structure to the Chemistry of the Elements. 8-6. The Beginnings of Bonding Theory. 8-7. The Ionic Bond. 8-8. Introduction to the Covalent Bond. 8-9. The Use of Approximate Wave Functions. \*8-10. A Two-electron System: The Helium Atom. \*8-11. Integrals of the  $H_2$  Calculation. \*8-12. An Unsuccessful Treatment of the  $H_2$  Molecule. \*8-13. The **Heitler-London** Treatment of the  $H_2$  Molecule. \*8-14. The Electron Spin in the Covalent Bond. \*8-15. The **Molecular-orbital** Method.

| <b>9. The Nature of the Chemical Bond . . . . .</b>   | <b>222</b> |
| <b>9-1.</b> The Qualitative Basis for the Covalent Bond. <b>9-2.</b> Heteronuclear Bonds and the Ionic Character of Bonds. <b>9-3.</b> Electronegativities. <b>9-4.</b> Directed Valence. <b>9-5.</b> $\pi$ Bonding. <b>9-6.</b> Aromatic Compounds and Resonance in Conjugated Systems. <b>9-7.</b> Bonding with <b>d Orbitals</b> . <b>9-8.</b> Bonding in Coordination Compounds.  |            |
| <b>10. Experimental Study of Molecular Structure. . . . .</b>   | <b>948</b> |
| <b>10-1.</b> <u>Rotational Spectra</u> . <b>10-2.</b> <u>Vibrational Spectra</u> . <b>10-3.</b> <u>_____</u><br><b>10-4.</b> The Interference phenomenon. <b>10-5.</b> The <b>Wierl</b> Equation. <b>10-6.</b> The Radial-distribution Method. <b>10-7.</b> <b>Some Basic</b> Electrostatic <b>Ideas</b> . <b>10-8.</b> Electrostatics for Dielectric Media. <b>10-9.</b> The Molecular Basis for <b>Dielectric</b> Behavior. <b>10-10.</b> Determination of the Dipole Moment and the Molecular Polarizability. <b>10-11.</b> Dipole Moments and Ionic Character. <b>10-12.</b> Bond Moments. <b>10-13.</b> Determination of Magnetic Molecular Properties; <b>10-14.</b> Molecular Interpretation of Diamagnetism. <b>10-15.</b> Molecular Interpretation of Paramagnetism. <b>10-16.</b> Magnetic Results for <b>Molecules</b> . <b>10-17.</b> Magnetic Results for Coordination Compounds. <b>10-18.</b> The Energy Levels of Nuclei in Magnetic Fields. <b>10-19.</b> nmr Spectroscopy. <b>10-20.</b> Chemical Shifts and Nuclear Magnetic Interactions. <b>10-21.</b> Electron-spin Resonance Spectroscopy.                       |            |
| <b>11. The Rates and Mechanisms of Chemical Reactions. . . . .</b>  | <b>397</b> |
| <b>11-1.</b> Experimental Approaches. <b>11-2.</b> Introduction to Rate Equations and Reaction Orders. <b>11-3.</b> Introduction to Reaction Mechanisms. <b>11-4.</b> The Relation between the <b>Rate</b> Equation and the Reaction Mechanism. <b>11-5.</b> <b>First-order</b> Reactions. <b>11-6.</b> Theory of <b>First-order Gas-phase</b> Reactions. <b>11-7.</b> <b>Second-order</b> Reactions. <b>11-8.</b> <b>Third-order</b> Reactions. <b>11-9.</b> <b>Consecutive</b> and <b>Opposing Reactions</b> : The Method of the Stationary State. <b>11-10.</b> <b>Chain Reactions</b> . <b>11-11.</b> Homogeneous Catalysis. <b>11-12.</b> Temperature Dependence of the Reaction Rate. <b>11-13.</b> The <b>Arrhenius</b> Theory. <b>11-14.</b> The Collision Theory. <b>11-15.</b> The Transition-state Theory. <b>11-16.</b> The Entropy of Activation. <b>11-17.</b> Light Absorption. <b>11-18.</b> The Primary Process. <b>11-19.</b> Secondary Processes. <b>11-20.</b> Some Photochemical Reactions. <b>11-21.</b> <b>Flash Photolysis</b> . <b>11-22.</b> Mass-spectroscopic Results. <b>11-23.</b> High-energy Radiation. |            |
| <b>12. Liquids . . . . .</b>  | <b>390</b> |
| <b>12-1.</b> The <b>Vapor</b> Pressure of Liquids. <b>12-2.</b> The Heat and Entropy of Vaporization. <b>12-3.</b> A <b>Theory</b> of Liquids and of the Entropy of Vaporization. <b>12-4.</b> Intermolecular Forces. <b>12-5.</b> Liquid Structure. <b>12-6.</b> The Viscosity of Liquids. <b>12-7.</b> Theory of Viscosity. <b>12-8.</b> <u>Surface Tension</u> . <b>12-9.</b> Surface Tension and the Free Energy of Small <b>Droplets</b> .   |            |
| <b>13. Crystals . . . . .</b>   | <b>418</b> |
| <b>13-1.</b> Crystal Forces. <b>13-2.</b> Crystal Forms. <b>13-3.</b> Crystal Indices. <b>13-4.</b> The Unit <b>Cell</b> . <b>13-5.</b> <b>X Rays</b> and X-ray Diffraction. <b>13-6.</b> The <b>Bragg</b> Method. <b>13-7.</b> Determination of the Unit-cell Dimensions. <b>13-8.</b> The Powder Method. <b>13-9.</b> The Structure Factor. <b>*13-10.</b> The Fourier Synthesis. <b>13-11.</b> The Heat Capacity of Crystals. <b>13-12.</b> Theories of Metal Crystals.  |            |
| <b>14. Phase Equilibria . . . . .</b>   | <b>451</b> |
| <b>14-1.</b> The Number of Phases. <b>14-2.</b> The Number of Components. <b>14-3.</b> The Number of <b>Degrees</b> of Freedom. <b>14-4.</b> <b>Systems</b> of One Phase. <b>14-5.</b> The  |            |

- Phase Rule. **14-6.** The One-component System, Water. 14-7. **Two-component** Liquid Systems. 14-8. Two-component &lid-Liquid Systems; **Formation** of a Eutectic Mixture. 14-9. Two-component Solid-Liquid Systems: **Compound** Formation. 14-10. Two-component **Solid-Liquid** Systems: **Miscible Solids**. 14-11. Three-component Systems. 14-12. Concentration Terms. 14-13. The Vapor Pressure of Ideal Solutions. 1414. The Thermodynamic Properties of Ideal Solutions. 14-15. The Molecular Interpretation of the Entropy of Mixing. 14-16. Nonideal Solutions. 14-17. Dilute-solution Laws. 14-18. Vapor-pressure **Diagrams** Showing Liquid and Vapor Compositions. 14-19. Boiling-point-Composition Diagrams. 14-20. Distillation. 14-21. Distillation of **Immiscible** Liquids.
- 15. Colligative Properties of Solutions . . . . . 495**
- 15-1. Effect of a Nonvolatile Solute on the Vapor Pressure of a Solution. 15-2. The Boiling-point Elevation. 15-3. The Freezing-point **Depression**. 15-4. Osmotic Pressure. 15-5. Osmotic-pressure Determination of Molecular **Weights**. 15-6. **Colligative Properties** of Electrolytes.
- 16. The Nature of Electrolytes in Solution . . . . . 513**
161. Electrical Conductivity of Solutions. 16-2. Equivalent Conductance. 163. Empirical Equivalent-conductance Relations. 16-4. The Arrhenius Theory of Dissociation. **16-5.** The Degree of Dissociation from van't Hoff  $i$  Factors. 166. Dissociation Equilibria. **16-7. Difficulties of the Arrhenius Theory** and Some Aspects of Ionic Solutions. 16-8. Interpretation of Conductance **Results** by the **Debye-Hückel** Theory. 16-9. Electrolysis and the Electrode Process. 16-11. Transference Numbers. 16-11. Ionic Conductances. 16-12. Ionic Mobilities. 16-13. Some Applications of Conductance Measurements.
- 17. The Thermodynamics of Nonideal Systems. . . . . 549**
- 17-1. Relation of **Free Energy** to Pressure. **17-2. Ideal Gases.** 17-3. **Non-ideal** Gases: The Fugacity. 17-4. The Standard State for Nonideal **Gases**: The Activity and the Activity Coefficient. 17-5. Evaluation of Activity Coefficients. **17-6.** Equilibrium Constants for Systems of Real **Gases**. 17-7. Solvents in Ideal Solutions. **17-8. Nonideal** Solutions: The Fugacity, Activity, and Activity **Coefficient**. **17-9.** Solutes of Dilute Solutions. 17-10. Solutes in Nonideal Solutions. 17-11. Ion Activities. 17-12. Dependence of Activity **Coefficients** on **Ionic** Strength. **\*17-13.** The **Debye-Hückel** Theory of Activity **Coefficients**. 17-14. **Two Methods** for the Determination of **Mean-activity Coefficients**. 17-15. Activity Coefficients in More Concentrated Solutions. 17-16. The **Use** of Constant Ionic Strength. 17-17. The Effect of Electrostatic Interaction on Reaction **Rates**.
- 18. The Electromotive Force of Chemical Cells. . . . . 585**
- 18-1.** The Electrochemical **Process**. 18-2. Potentiometric **Measurement** of EMF. 18-3. **Types** of Electrodes. **18-4.** Electrochemical Cells and **Sign** Conventions. **18-5.** Standard **EMFs** and Electrode Potentials. **18-6.** The Concentration and Activity Dependence of the EMF. **18-7.** Activity Coefficients from EMF **Measurements**. 18-8. Equilibrium Constants and **Solubility** Products from EMF Data. 18-9. Electrode-concentration Cells. 18-10. **Electrolyte-concentration** Cells. 18-11. Electrolyte-concentration Cells with **Liquid** Junction. 18-12. The **Salt** Bridge. 18-13. The Glass Electrode. 18-14. pH Definition and Measurement. 18-15. The Temperature **Dependence** of EMF. 18-16. Thermodynamic **Properties** of Ions in Aqueous Solution.
