

Contents

One The Nature of Physical Chemistry and the Behavior of Gases

- 1.1 The Nature of Physical Chemistry, **2**
- 1.2 Some Concepts from Classical **Mechanics**, **3**
Work, **3** Kinetic and Potential Energy, **4**
- 1.3 Systems, States, and Equilibrium, **5**
- 1.4 Thermal Equilibrium, **6**
The Concept of Temperature and Its Measurement, **7**
- 1.5 Boyle's Law, **7**
- 1.6 Gay-Lussac's (Charles's) Law, **8**
- 1.7 The Ideal-Gas Thermometer, **10**
- 1.8 The Equation of State for an Ideal Gas, **11**
The Gas Constant and Mole Concept, **11**
- 1.9 The Kinetic-Molecular Theory of Ideal Gases, **13**
The Pressure of a Gas Derived from Kinetic Theory, **15** Kinetic Energy and Temperature, **16** Dalton's Law of Partial Pressures, **17** Graham's Law of Effusion, **18** Molecular Collisions, **19**
- 1.10 The Barometric **Distribution** Law, **22**
- 1.11 Real Gases, **25**
The Compression Factor, **25** Condensation of Gases: The Critical Point, **26**
- 1.12 Equations of State, **29**
The Van der **Waals** Equation of State, **29** The Law of Corresponding States, **32**
Other Equations of State, **33**
- 1.13 The **Virial** Equation, **35**

Two The First Law of Thermodynamics

- 2.1 Origins of the First Law, **44**
- 2.2 Thermodynamic Systems, **44**
- 2.3 States and State Functions, **44**

- 24 **Equilibrium States and Reversibility, 45**
 25 Energy, Heat, and Work, 47
 The Nature of Work, 49 Processes at Constant Volume, 52 Processes at
 Constant Pressure: Enthalpy, 52 Heat Capacity, 53
- 26 **Thermochemistry, 55**
 Extent of Reaction, 55 Standard States, 57 Measurement of Enthalpy
 Changes, 58 Calorimetry, 60 Relationship between ΔU and ΔH , 60
 Temperature Dependence of Enthalpies of Reaction, 62 Enthalpies of
 Formation, 64 Bond Strengths, 68
- 27 **Ideal Gas Relationships, 70**
 Reversible Compression at Constant Pressure, 70 Reversible Pressure Change at
 Constant Volume, 72 Reversible **Isothermal** Compression, 72 Reversible
 Adiabatic Compression, 74
- 28 **Real Gases, 76**
 The Joule-Thomson Experiment, 76

Three

The Second and Third Laws of Thermodynamics

86

- 3.1 **The Carnot Cycle, 88**
 Efficiency of a Reversible **Carnot** Engine, 92 Carnot's Theorem, 92 The
 Thermodynamic Scale of Temperature, 94 The Generalized Cycle: The Concept
 of Entropy, 94
- 3.2 **Irreversible Processes, 96**
- 3.3 **The Calculation of Entropy Changes, 99**
 Changes of State of Aggregation, 100 Ideal Gases, 101 Entropy of Mixing, 102
 Solids and Liquids, 104
- 3.4 **Molecular Interpretation of Entropy, 106**
- 3.5 **The Third Law of Thermodynamics, 108**
 Cryogenics: The Approach to Absolute Zero, 109 Absolute Entropies, 110
- 3.6 **Conditions for Equilibrium, 111**
 Constant Temperature and Pressure: The Gibbs Energy, 113 Constant
 Temperature and Volume: The Helmholtz Energy, 114
- 3.7 **The Gibbs Energy, 114**
 Molecular Interpretation, 114 Gibbs Energies of Formation, 117 Gibbs Energy
 and Reversible Work, 118
- 3.8 **Some Thermodynamic Relationships, 119**
 Maxwell Relations, 120 Thermodynamic Equations of State, 122 Some
 Applications of the Thermodynamic Relationships, 122 Fugacity, 124
- 3.9 **The Gibbs-Helmholtz Equation, 128**
- 3.10 **Thermodynamic Limitations to Energy Conversion, 129**
 First Law Efficiencies, 129 Second Law Efficiencies, 129 Refrigeration and
 Liquefaction, 130 Heat Pumps, 132 Chemical Conversion, 133

Four

Chemical Equilibrium

141

- 4.1 **Chemical Equilibrium Involving Ideal Gases, 143**
 Equilibrium Constant in Concentration Units, 144 Units of the Equilibrium
 Constant, 146

- 4.2 Equilibrium in Nonideal Gaseous Systems, 149
- 4.3 Chemical Equilibrium in Solution, 150
- 4.4 Heterogeneous Equilibrium, 151
- 4.5 Tests for Chemical Equilibrium, 152
- 4.6 Shifts of Equilibrium at Constant Temperature, 153
- 4.7 **Coupling** of Reactions, 154
- 4.8 Temperature Dependence of Equilibrium constants, 155
- 4.9 Pressure Dependence of Equilibrium Constants, 159

Five

Phases and Solutions

166

- 5.1 Phase Recognition, 167
Phase Distinctions in the Water System, 168 Phase Equilibria in a One-Component System: Water, 168
- 5.2 Vaporization and Vapor Pressure, 171
Thermodynamics and Vapor Pressure: The Clapeyron Equation, 171 The Clausius-Clapeyron Equation, 175 Enthalpy and Entropy of Vaporization: Trouton's Rule, 176 Variation of Vapor Pressure with External Pressure, 178
- 5.3 Classification of Transitions in Single-Component Systems, 179
- 5.4 ideal Solutions: Raoult's and Henry's Laws, 180
- 5.5 **Partial** Molar Quantities, 184
Relation of Partial Molar Quantities to Normal Thermodynamic Properties, 186
- 5.6 The Chemical Potential, 187
- 5.7 **Thermodynamics** of Solutions, 190
Raoult's Law Revisited, 190 Ideal Solutions, 192 Nonideal Solutions, Activity, and Activity Coefficients, 195
- 5.8 The Colligative Properties, 196
Freezing Point Depression, 196 Ideal Solubility and the Freezing Point Depression, 200 Boiling Point Elevation, 202 Osmotic Pressure, 202

Six

Phase Equilibria

210

- 6.1 Equilibrium Between Phases, 211
Number of Components, 211 Degrees of Freedom, 212 The Phase Rule, 213
- 6.2 One-Component Systems, 214
- 6.3 Binary Systems **Involving** Vapor, 216
Liquid-Vapor Equilibria of Two-Component Systems, 216 Liquid-Vapor Equilibrium Systems Not Obeying Raoult's Law, 219 Temperature-Composition Diagrams: Boiling Point Curves, 219 Distillation, 221 **Azeotropes**, 225
Distillation of Immiscible Liquids: Steam Distillation, 227 Distillation of Partially Miscible Liquids, 228
- 6.4 Condensed Binary Systems, 229
Two-Liquid Components, 229 Solid Solutions, 236 **Partial** Miscibility, 237
Compound Formation, 239
- 6.5 Ternary Systems, 241
Liquid-Liquid Ternary **Equilibrium**, 241 Solid-Liquid Equilibrium in Three-Component Systems, 242

Electrical Units, 252

7.1 Faraday's Laws of Electrolysis, 253

7.2 Molar Conductivity, 255

7.3 Weak Electrolytes: The Arrhenius Theory, 258

Ostwald's Dilution Law, 259

7.4 Strong Electrolytes, 260

The Debye-Hückel Theory, 261 The Ionic Atmosphere, 262 Mechanism of Conductivity, 268 Ion Association, 271 Conductivity at High Frequencies and Potentials, 272

7.5 Independent Migration of Ions, 272

Ionic Mobilities, 274

7.6 Transport Numbers, 275

Hittorf Method, 276 Moving Boundary Method, 279

7.7 Ion Conductivities, 280

Ionic Solvation, 282 Mobilities of Hydrogen and Hydroxide Ions, 282 Ionic Mobilities and Diffusion Coefficients, 283 Walden's Rule, 284

7.8 Thermodynamics of Ions, 284

7.9 Theories of Ions in Solution, 286

Born's Model, 286 More Advanced Theories, 288 Qualitative Treatments, 289

7.10 Activity Coefficients, 292

Debye-Hückel Limiting Law, 292 Deviations from the Debye-Hückel Limiting Law, 295

7.11 Ionic Equilibria, 296

Activity Coefficients from Equilibrium Constant Measurements, 296 Activity Coefficients from Solubility Product Measurements, 298

7.12 The Donnan Equilibrium, 299

8.1 The Daniell Cell, 308

8.2 Standard Electrode Potentials, 310

The Standard Hydrogen Electrode, 311 Other Standard Electrodes, 315 Ion-Selective Electrodes, 317

8.3 Thermodynamics of Electrochemical Cells, 318

The Nernst Equation, 323 Nernst Potentials, 326 Temperature Coefficients of Cell emfs, 330

8.4 Types of Electrochemical Cells, 331

Concentration Cells, 332 Redox Cells, 333

8.5 Applications of emf Measurements, 335

pH Determinations, 335 Activity Coefficients, 335 Equilibrium Constants, 337 Solubility Products, 338

8.6 Fuel Cells, 339

8.7 Photogalvanic Cells, 341

- 9.1 Rates of Consumption and Formation, **348**
- 9.2 Rate of Reaction, **349**
- 9.3 Empirical Rate Equations, **350**
Order of Reaction, **350** Reactions Having No Order, **352** Rate Constants and Rate Coefficients, **352**
- 9.4 Analysis of Kinetic Results, **353**
Method of Integration, **354** Half-life, **357** Differential Method, **359** Reactions Having No Simple Order, **359** Opposing Reactions, **359**
- 9.5 Techniques for Very Fast Reactions, **360**
Flow Techniques, **361** Relaxation Methods, **362**
- 9.6 Molecular **Kinetics**, **364**
Molecularity and Order, **365**
- 9.7 The Arrhenius Law, **365**
Activation Energy, **370**
- 9.8 Potential-Energy Surfaces, **372**
- 9.9 The Preexponential Factor, **376**
Hard-Sphere Collision Theory, **376** Transition State Theory, **378**
- 9.10 Reactions in Solution, **383**
Influence of Solvent Dielectric Constant, **384** Influence of Ionic Strength, **388**
Influence of Hydrostatic Pressure, **389** Diffusion-Controlled Reactions, **392**
Linear Gibbs Energy Relationships, **392**
- 9.11 Molecular Dynamics, **393**
Molecular Beams, **394** Chemiluminescence, **396** Dynamical Calculations, **397**

- 10.1 Evidence for a Composite Mechanism, **405**
- 10.2 Types of Composite Reactions, **406**
- 10.3 Rate Equations for Composite Mechanisms, **406**
Chemical Flux, or Chernflux, **406** Consecutive Reactions, **407** Steady-State Treatment, **409** Rate-Determining (Rate-Controlling) Steps, **411**
- 10.4 Rate Constants, Rate Coefficients, and Equilibrium Constants, **412**
- 10.5 Free-Radical Reactions, **413**
Chain Reactions, **414** Organic Decompositions, **416**
- 10.6 Photochemical Reactions, **417**
Photosensitization, **419** The Photochemical Hydrogen-Bromine Reaction, **420**
- 10.7 Radiation-Chemical Reactions, **420**
- 10.8 **Explosions**, **423**
- 10.9 Catalysis, **423**
Acid-Base Catalysts, **425** Brønsted Relationships, **429** Enzyme Catalysis, **430**
- 10.10 Reactions in Solution, **432**
Collisions and Encounters, **432**

- 11.1 The Nature of Electromagnetic Radiation, 440**
Simple Harmonic Motion, 442 Plane Waves and Standing Waves, 445
Blackbody Radiation, 448 The Photoelectric Effect, 452
- 11.2 Atomic Spectra and the Old Quantum Theory, 453**
- 11.3 The Wave Nature of Electrons, 457**
The Uncertainty Principle, 460
- 11.4 Schrödinger's Wave Equation, 461**
Eigenfunctions and Normalization, 464
- 11.5 Quantum-Mechanical Postulates, 466**
Orthogonality of Wave Functions, 471
- 11.6 Quantum Mechanics of Some Simple Systems, 472**
The Free Particle, 472 The Particle in a Box, 474 The Harmonic Oscillator, 478
- 11.7 Quantum Mechanics of Hydrogenlike Atoms, 481**
Solution of the Φ Equation, 483 Solution of the Θ Equation, 484 Solution of the R Equation, 486 Complete Wave Functions, 486
- 11.8 Physical Significance of the Orbital Quantum Numbers, 487**
The Principal Quantum Number n , 488 Angular Dependence of the Wave Function: The Quantum Numbers l and m_l , 492
- 11.9 Angular Momentum and Magnetic Moment, 493**
Angular Momentum, 494 Magnetic Moment, 496
- 11.10 The Rigid Linear Rotor, 498**
- 11.11 Spin Quantum Numbers, 499**
- 11.12 Many-Electron Atoms, 501**
The Aufbau Principle, 501 The Pauli Exclusion Principle, 503 Hund's Rule, 503
- 11.13 Approximate Methods in Quantum Mechanics, 504**
The Variation Method, 505 The Self-consistent Field (SCF) Method, 506 Slater Orbitals, 507

- 12.1 The Hydrogen Molecule-Ion, H_2^+ , 516**
- 12.2 The Hydrogen Molecule, 519**
The Valence-Bond Method, 519 Electron Spin, 522 The Molecular-Orbital Method, 524
- 12.3 Valence-Bond Theory, 528**
The Covalent Bond, 528 Electronegativity, 529 Orbital Overlap, 531 Orbital Hybridization, 533 Multiple Bonds, 536
- 12.4 Symmetry In Chemistry, 538**
Symmetry Elements and Symmetry Operations, 538 Point Groups and Multiplication Tables, 542 Group Theory, 545
- 12.5 Molecular Orbitals, 547**
Homonuclear Diatomic Molecules, 547 Heteronuclear Diatomic Molecules, 553
The Water Molecule, 554

- 13.1 Emission and Absorption Spectra, 564**
Units of Wavelength and Frequency, 565 The Energy of Radiation in Emission and Absorption, 565 The Laws of Lambert and Beer, 566
- 13.2 Atomic Spectra, 568**
Coulombic Interaction and Term Symbols, 569 Exchange Interaction: Multiplicity of States, 571 Spin-Orbit Interactions, 573 The Vector Model of the Atom, 575 The Effect of an External Magnetic Field, 578
- 13.3 Pure Rotational Spectra of Molecules, 583**
Diatomic Molecules, 585 Linear Triatomic Molecules, 588 Microwave Spectroscopy, 589 Nonlinear Molecules, 590 The Stark Effect, 590
- 13.4 Vibrational-Rotational Spectra of Molecules, 591**
Diatomic Molecules, 592 Normal Modes of Vibration, 599 Infrared Spectra of Complex Molecules, 602 Characteristic Group Frequencies, 604
- 13.5 Raman Spectra, 607**
- 13.6 Electronic Spectra of Molecules, 611**
Term Symbols for Linear Molecules, 612 Selection Rules, 613 The Structure of Electronic Band Systems, 613 Excited Electronic States, 616 The Fate of Electronically Excited Species, 618
- 13.7 Laser Spectroscopy, 622**
- 13.8 Transition Probabilities, 623**
- 13.9 Spectral Line Widths, 624**
Doppler Broadening, 624 Lifetime Broadening, 625
- 13.10 Electron Spin Resonance Spectroscopy, 626**
Hyperfine Structure, 628
- 13.11 Nuclear Magnetic Resonance Spectroscopy, 630**
Chemical Shifts, 632 Spin-Spin Splitting, 634
- 13.12 Mössbauer Spectroscopy, 635**

- 14.1 Forms of Molecular Energy, 646**
Molar Heat Capacities of Gases, 647
- 14.2 Statistical Mechanics, 649**
The Boltzmann Distribution Law, 653
- 14.3 The Maxwell-Boltzmann Distributions of Molecular Speeds and Translational Energies, 656**
The Distribution of Speeds, 656 The Distribution of Energy, 658
- 14.4 The Partition Function, 660**
The Molecular Partition Function, 660 The Partition Function for the System, 662
- 14.5 Thermodynamic Quantities from Partitlon Functions, 663**
- 14.6 The Partitlon Function for Some Speical Cases, 666**
Translational Motion, 667 Rotational Motion, 669 Vibrational Motion, 671
The Electronic Partition Function, 675 The Nuclear Partition Function, 676

- 14.7 The Internal Energy, Enthalpy, and Gibbs Energy Functions, **676**
14.8 The Calculation of Equilibrium Constants, **678**
Direct Calculation from Partition Functions, **680**

Fifteen

The Solid State

691

- 15.1 Crystal Forms, **692**
15.2 Crystal Lattices, **693**
The Unit Cell, **693** Symmetry Properties, **696** Point Groups and Crystal Systems, **698** Space Lattices, **699** Space Groups, **700**
15.3 Crystal Planes and **Miller** Indices, **701**
Indices of Direction, **702**
15.4 X-Ray Crystallography, **703**
The Bragg Equation, **704**
15.5 The **Reciprocal** Lattice, **706**
Bragg's Law in Reciprocal Space, **706**
15.6 **Experimental** Methods, **709**
The Laue Method, **709** The Powder Method, **710** The Rotating Crystal Methods, **711** Electron Diffraction, **712** Neutron Diffraction, **712**
15.7 Interpretation of X-Ray Diffraction Patterns, **713**
15.8 Crystal Structure Determinations, **715**
The Scattering Factor and Structure Factor, **715** Fourier Synthesis, **717**
15.9 Structure of Crystals, **718**
The Bond Model, **718** Ionic, Covalent, and van der Waals Radii, **720** Binding Energy of Ionic Crystals, **720** The Born-Haber Cycle, **721**
15.10 The Structure of Metals, **722**
Closest Packing of Spheres, **722** Metallic Radii, **724**
15.11 Bonding in Metals, Semiconductors, and Insulators, **725**
The Free-Electron Gas Theory, **725** Band Theory, **726**
15.12 Statistical Thermodynamics of Crystals: Theories of Heat **Capacities**, **728**
The Einstein Model, **728** The Debye Model, **729** Fermi-Dirac Statistics, **730**
15.13 Energy Bands and Defect Structures, **732**
Metals, Semiconductors, and Insulators, **732** Doping of Semiconductors, **732**
15.14 Optical **Properties** of Solids, **733**
Color Centers: Nonstoichiometric Compounds, **732** Luminescence in Solids, **734**

Sixteen

The Liquid State

739

- 16.1 Liquids Considered as Dense Gases, **741**
Internal Pressure, **742** Internal Energy, **743**
16.2 Liquids Considered as Disordered **Solids**, **745**
Radial Distribution Functions, **746** X-Ray Diffraction, **748** Neutron Diffraction, **750** Glasses, **751**
16.3 Intermolecular Forces, **751**
Ion-Ion Forces, **752** Ion-Dipole Forces, **753** Dipole-Dipole Forces, **754**

Dispersion Forces, 755 Repulsive Forces, 756 Resultant Intermolecular Energies, 756

16.4 Lattice Theories of Liquids, 757

Free-Volume Theories, 758 Hole Theories, 761 Monte Carlo and Molecular-Dynamical Theories, 763

16.5 Distribution-Function Theories of Liquids, 764

Seventeen Surface Chemistry and Colloids

769

17.1 Adsorption, 771

17.2 Adsorption isotherms, 771

The Langmuir Isotherm, 772 Adsorption with Dissociation, 773 Competitive Adsorption, 774 Other Isotherms, 775

17.3 Thermodynamics and Statistical Mechanics of Adsorption, 776

17.4 Chemical Reactions on Surfaces, 778

Unimolecular Reactions, 778 Bimolecular Reactions, 780

17.5 Surface Heterogeneity, 782

17.6 The Structure of Solid Surfaces and Adsorbed Layers, 783

17.7 Surface Tension and Capillarity, 787

17.8 Liquid Films on Surfaces, 790

17.9 Solid-Liquid interfaces, 793

The Electric Double Layer, 793

17.10 Colloidal Systems, 795

Lyophobic and Lyophilic Sols, 796 Light Scattering by Colloidal Particles, 797 Electrical Properties of Colloidal Systems, 799 Gels, 801 Emulsions, 803

Eighteen Transport Properties

808

18.1 Viscosity, 809

Measurement of Viscosity, 810 Viscosities of Gases, 812 Viscosities of Liquids, 816 Viscosities of Solutions, 818

18.2 Diffusion, 820

Fick's Laws, 821 Solutions of Diffusion Equations, 822 Self-Diffusion of Gases, 828 The Driving Force of Diffusion, 829 Diffusion and Ionic Mobility, 831 Stokes's Law, 832 Diffusion Through Membranes, 834

18.3 Sedimentation, 836

Sedimentation Velocity, 836 Sedimentation Equilibrium, 838

18.4 Electrokinetic Effects, 840

Electroosmosis, 840 Electrophoresis, 842 Reverse Electrokinetic Effects, 843

Nineteen Macromolecules

848

19.1 Mechanisms of Polymerization, 849

19.2 Kinetics of Polymerization, 852

Free-Radical Polymerization, 852 Condensation Polymerization, 854

- 19.3 Relative Molecular Masses of Macromolecules, 854**
Colligative Properties, 855 Chemical Analysis, 856 Types of Relative Molecular Masses, 857
- 19.4 Molecular Sizes and Shapes, 859**
Flow Birefringence, 860 Methods Based on Transport Properties, 860 Light Scattering, 860 Gel Filtration, 860
- 19.5 Bond Distances and Angles, 861**
- 19.6 Macromolecular Conformations, 863**
Protein Conformations, 865 Random Coils, 867
- 19.7 Physical Properties of Solid Polymers, 871**
Crystallinity, 872 Plasticity, 873 Elasticity, 874

Appendix A	Units, Quantities, and Symbols: The SI/IUPAC Recommendations	881
Appendix B	Physical Constants	897
Appendix C	Some Mathematical Relationships	898
