FOREWORD TO THE SECOND GERMAN EDITION	v
FOREWORD TO THE FIRST EDITION	vi
1. INTRODUCTION	1
2. A REVIEW OF THE HISTORY OF LABORATORY DISTILLATION (from early times to 1920)	5
3. STANDARDIZATION AND DATA ON CONCENTRATIONS	17
3.1 Standardization of distillation apparatus	17
3.2 Definition of concepts	18
3.3 Symbols and units	18
3.4 Definitions and conversion of concentrations	19
4. PHYSICAL FUNDAMENTALS OF THE SEPARATION PROCESS	24
4.1 Principles of simple and countercurrent distillation	24
4.2 Equilibria in distillation	28
4.21 Molecular forces in fluids , 4.22 Miscibility and vapour-liquid equilibria , 4.23 Pressure, temperature, and equilibrium diagrams; relative volatility , 4.24 Non-ideal systems; activity	
4.3 Vapour pressure-temperature relationship	44
4.31 Measurement of saturated vapour pressures , 4.32 Calculation and representation of saturated vapour pressures , 4.33 Calculations involving vapour pressure	
4.4 Calculation of vapour-liquid equilibria	65
4.41 Ideal mixtures , 4.42 Insoluble mixtures , 4.43 Non-ideal systems 4.44 Calculation of relative volatility	
4.5 The experimental determination of equilibrium curves	76
4.6 Number of theoretical plates (separating stages)	86
4.61 Calculation of separating stages by the McCabe-Thiele method in batch operation , 4.62 Calculation of separating stages by the McCabe-Thiele method in continuous distillation , 4.63 Determination of separating stages by the McCabe-Thiele method for equilibrium curves with an inflection point or an azeotropic point , 4.64 Determination of separating stages for flat equilibrium curves and for equilibrium curves close to operating line , 4.65 Methods for determining the plate number in batch distillation arith- metically	

4.651 Determination of the plate number from difference in boiling point	
4.652 Calculation of the plate number with the aid of the fractionating factor and the Rose formulae	
4.653 Calculation of the minimum plate number by the Fenske equation for ideal mixtures and $v = \infty$	
4.654 Determination of the plate number in batch distillation from hold-up and transition fraction by Zuiderweg's equation	
4.7 Theory of packed columns	122
4.71 Process of separation in a packed column	
4.72 Determination of the number of transfer units n_{tu}	
4.73 Intensity of countercurrent exchange; time required	
4.8 Determination of the plate number in the batch and continuous separation of multi-component mixtures	135
4.9 Testing plate columns and packed columns	141
4.91 Column diameter	
4.92 Effective separating length; the introduction of column packing	
4.93 Test mixtures and the composition of the charge	
4.94 Reflux ratio and quantity of reflux	
4.95 Total, static and operating hold-up	
4.96 Operating pressure	
4.97 Load and vapour velocity	
4.98 Method of column calibration	
4.99 Data for packed and plate columns	
4.10 Pressure drop, limiting velocity and calculation of column dimensions	169
4.11 Heat calculations	182
4.12 Distillate properties	187
4.13 Distillation diagrams	192
5. SEPARATING PROCESSES	202
5.1 The scale of operation	202
5.11 Micro- and semi-microdistillation	
5.12 Analytical distillation	
5.13 Preparative and production distillation	
5.14 The separation of isotopes	
5.141 Isotope separation by low-temperature countercurrent distillation	
5.142 The preparation of D_2 and $^{18}O_2$ by countercurrent distillation of water	
5.143 The preparation of various isotopes	
5.2 Methods of operation	249
5.21 Batch and semi-continuous distillation	
5.22 Continuous distillation	
5.221 Applications	
5.222 Calculation	
5.223 Apparatus for continuous column distillation	
5.224 Examples of application from laboratory practice	
5.225 Starting up continuous distillations	
5.23 Separation by partial condensation	
5.3 Temperature	264
5.31 Low-temperature distillation	
5.32 High-temperature and isothermal distillation	
5.4 Distillation pressure	276
5.41 Simple and countercurrent distillation under reduced pressure	
5.42 Continuous equilibrium vaporisation (flash distillation)	
5.43 Thin-film distillation	
5.44 Molecular distillation	
5.45 Pressure distillation	

6. SELECTIVE SEPARATING PROCESSES	309
6.1 Carrier vapour distillation	311
6.2 Azeotropic and extractive distillation	315
6.21 Azeotropic distillation , 6.22 Extractive distillation , 6.23 Apparatus for selective distillations	
6.3 Solution distillation and special methods.	334
7. CONSTRUCTIONAL MATERIALS AND APPARATUS	339
7.1 Constructional materials for distillation apparatus.	339
7.2 Standard apparatus and unit parts	340
7.3 Columns.	346
7.31 Empty columns , 7.32 Packed columns , 7.33 Plate columns , 7.34 Columns with stationary elements , 7.35 Columns with rotating elements	
7.4 Condensers and dephlegmators	379
7.5 Adapters; still and column heads	385
7.51 Adapters , 7.52 Still heads , 7.53 Column heads	
7.6 Still pots, receivers and fraction collectors	399
7.61 Still pots , 7.62 Receivers and fraction collectors	
7.7 Insulation and heating devices	407
7.71 Heating equipment , 7.72 Insulation	
7.8 Packings	422
7.81 Shape of packing units , 7.82 Constructional material of packings , 7.83 Effective surface area of packing	
8. AUTOMATIC DEVICES; MEASURING AND CONTROL EQUIPMENT	436
8.1 Automatic equipment	436
8.2 Temperature measurement and control	450
8.21 Temperature measurement , 8.22 Temperature control	
8.3 Pressure measurement and control	469
8.31 Pressure measurement and control above 760 mm and from 1–760 mm Hg	
8.311 The air-leak method , 8.312 The method of controlled evacuation	
8.32 Pressure measurement and control from 1 to 10^{-8} mm Hg	
8.321 The McLeod compression manometer , 8.322 Thermal conductivity and ionization manometers	
8.4 Reflux and rate of evaporation	488
8.41 Time-operated devices for reflux control , 8.42 Control of boil-up rate	
8.5 Measurement of physical data during distillation	492
8.51 Melting point , 8.52 Refractive index , 8.53 Dielectric constant	
8.54 Various determinations	
8.6 Measurement and metering of gases and liquids.	498

9. ARRANGEMENT OF A DISTILLATION LABORATORY; STARTING UP DISTILLATION APPARATUS.	504
9.1 Lay-out	504
9.2 Frameworks and services	507
9.3 Building up the apparatus	512
9.4 Sealing ground joints	516
9.5 Starting up distillation apparatus	518
9.6 Safety measures	519
GLOSSARY	522
APPENDIX I	
Cox chart families and their focal points	533
APPENDIX II	
Data for test mixtures.	535
APPENDIX III	
Example on the calculation of distillation conditions	548
AUTHOR INDEX	554
SUBJECT INDEX.	558
LIST OF SYMBOLS.	(Inside back cover)
NOMOGRAMS.	(Inside back cover)
1. Concentration calculations	
2. Conversion of mol. % to wt. %	
3. Enrichment in simple distillation	
4. Ideal equilibrium curves	
5. Minimum plate number for ideal mixtures	
6. Plate number for batch distillation	
7. Limiting velocities for packings	
8. Barometer correction	
9. Thermometer correction	
10. Minimum plate number for low-temperature distillation	
11. Sizing of vacuum lines
