

CONTENTS

PART 1 GENERAL ANALYSIS	1
Chapter 1 Mathematical Operations	2
Chapter 2 Chemical Equations	15
Chapter 3 Calculations Based on Formulas and Equations	26
Chapter 4 Concentrations of Solutions	32
Chapter 5 Reaction and Equilibrium Constants	41
Chapter 6 Redox Potentials	85
PART 2 GRAVIMETRIC ANALYSIS	103
Chapter 7 The Chemical Balance	104
Chapter 8 Calculations of Gravimetric Analysis	112
Chapter 9 Calculations from Reported Percentages	134
PART 3 VOLUMETRIC ANALYSIS	149
Chapter 10 Calibration of Measuring Instruments	150
Chapter 11 Neutralization Methods (Acidimetry and Alkalimetry)	154
Chapter 12 Redox Methods (Oxidimetry and Reductimetry)	200
Chapter 13 Precipitation Methods (Precipitometry)	236
Chapter 14 Complex-ion-formation Methods (Compleximetry)	241
PART 4 ELECTROCHEMICAL METHODS	249
Chapter 15 Electrolytic Methods	250
Chapter 16 Potentiometric Titrations	263
Chapter 17 Conductometric Titrations	280
Chapter 18 Polarography. Amperometric Titrations. Chronopotentiometry	290
Chapter 19 Coulometric Titrations	301
PART 5 OPTICAL METHODS OF ANALYSIS	305
Chapter 20 Absorption Methods	306
Chapter 21 Emission Methods	326
Chapter 22 X-ray Methods	339
Chapter 23 Nuclear Magnetic Resonance	346
Chapter 24 Mass Spectrometry	351
Chapter 25 Refractometry and Polarimetry	363

PART 6 SPECIALIZED METHODS	367
Chapter 26 Radiochemical Methods	368
Chapter 27 Thermal Methods	378
Chapter 28 Kinetic Methods	383
Chapter 29 Extraction Methods	388
Chapter 30 Chromatographic Methods	393
Chapter 31 Gas-volumetric Analysis	407
Chapter 32 Functional Group Determinations	419
PART 7 COMMON ANALYTICAL DETERMINATIONS	425
PART 8 MISCELLANEOUS PROBLEMS	445
I. Qualitative Analysis	446
II. Quantitative Analysis	450
PART 9 ANSWERS TO PROBLEMS	471
