

CONTENTS

|   |     |
|---|-----|
| 1. Ligand Field Theory and the Properties of Transition Metal Complexes   | 1   |
| 2. Electron Paramagnetic Resonance Spectroscopy   | 93  |
| 3. Mossbauer Spectroscopy   | 161 |
| 4. Polarized Absorption Spectroscopy  | 213 |
| 5. Luminescence Spectroscopy  | 259 |
| 6. Laser Spectroscopy   | 307 |
| 7. IR, Raman, and Resonance Raman Spectroscopy  | 353 |
| 8. Photoelectron Spectra of Inorganic and Organometallic Molecules in the Gas Phase<br>Using Synchrotron Radiation                              | 443 |
| 9. X-Ray Absorption Spectroscopy and EXAFS Analysis: The Multiple-Scattering Method<br>and Applications in Inorganic and Bioinorganic Chemistry | 513 |
| 10. Electronic Structure Calculations on Transition Metal Complexes: Ab-Initio and<br>Approximate Models  | 555 |
| 11. Electronic Structure Calculations: Density Functional Methods with Applications to<br>Transition Metal Complexes                            | 661 |
| Index   | 725 |
