

CONTENTS

1. Bioinorganic Spectroscopy	1
2. Electron-Transfer Reaction Rate Theory	131
3. Mixed Valence	175
4. Electrochemistry, Charge Transfer Spectroscopy, and Electronic Structure	227
5. The Photophysics and Photochemistry of Coordination Compounds	291
6. Multiple Metal-Metal Bonds	343
7. Transition Metal Nitrosyls	403
8. Electronic Structure of Heme Sites	451
9. Characterization of the Electronic Structure of Transition Metal Carbonyls and Metallocenes	533
10. Spin Transition in Iron(II) Compounds	575
11. Neutron and Optical Spectra of Magnetically Ordered Crystals	623
Index	651
