Contents

1. Time-Domain Fluorescence Spectroscopy Using Time-Correlated Single-Photon Counting

David J. S. Birch and Robert E. Imhof

1.1. Introduction 1
1.1.1. What Is a Fluorescence Lifetime? 2
1.1.2. Methods of Measuring Fluorescence Lifetimes 4
1.1.3. Analytical Applications 6
1.2. The Single-Photon Technique 8
1.2.1. Basic Principles 9
1.2.2. Statistics and Pileup 11
1.2.3. Instrumental Response and Convolution 14
1.3. Data Analysis 16
1.3.1. Formulation of the Problem 17
1.3.2. Least-Squares Fitting 19
1.3.3. Fitting Algorithms 22
1.3.4. Anisotropy Analysis 26
1.4. Instrumentation 28
1.4.1. Pulsed Light Sources 28
1.4.2. Optical Components 36
1.4.3. Detectors 41
1.4.4. Electronics and Computer Hardware 47
1.5. Applications and Performance 52
1.5.1. Exponential Decay 52
1.5.2. Nonexponential Decay 59
1.5.3. Anisotropy 64
1.5.4. Time-Resolved Spectra 71
1.6. Multiplexing Techniques 73
1.6.1. Differential Pulse Fluorometry 75
1.6.2. T-Format Studies 81
1.6.3. Array Fluorometry 83
References 88

2. Laser Sources and Microchannel Plate Detectors for Pulse Fluorometry
Enoch W. Small

2.1. Introduction 97
2.2. Laser Sources. 99
2.2.1. Laser Fundamentals. 100
2.2.2. The Argon Ion, Nd:YAG, and Dye Lasers—Energy Levels and Physical Layout. 123
2.2.3. Laser Pulse Generation 132
2.3. The Microchannel Plate (MCP) Photomultiplier. 146
2.3.1. How an MCP Photomultiplier Works. 147
2.3.2. Photomultiplier Performance 155
2.4. Tuning a Monophoton Decay Fluorometer for High Performance 168
2.4.1. Judging the Quality of Data 168
2.4.2. Tuning 170
2.4.3. Performance of a Tuned Instrument. 174
2.5. Conclusion 178
References 180

3. Streak Cameras for Time-Domain Fluorescence

Thomas M. Nordlund

3.1. Introduction 183
3.1.1. What Is a Streak Camera?. 183
3.1.2. Scope of the Chapter 185
3.1.3. Basic Features and Abilities of a Photoelectronic Streak Camera 186
3.1.4. History 187
3.2. System Building Blocks. 190
3.2.1. Modes of Operation 190
3.2.2. Image Converter Tube 194
3.2.3. Image Intensifiers 205
3.2.4. Signal Readout and Storage 208
3.2.5. Computer and Data Manipulation. 212
3.3. Streak Camera Capabilities 213
3.3.1. Detector Characteristics. 213
3.3.2. Signal Averaging. 222
3.3.3. Streak Cameras and Time-Resolved Single-Photon Counting 223
3.4. Time Dependence of Fluorescence 225
3.4.1. Decay Times 225
3.4.2. Rise Times 231
3.4.3. Physical Processes and Characteristic Times. 233

3.5. Wavelength Dependence of Fluorescence 233
3.5.1. Measurement of Time and Wavelength Dependence of Signals: Additional Time Dispersion 234
3.5.2. Time Dependence of Emission Spectra 237
3.6. Two-Dimensional Detection: Space and Time Coordinates 239
3.6.1. Position and Time Detection 239
3.6.2. Two-Dimensional Spatial Detection 240
3.7. Fluorescence Anisotropy 241
3.7.1. Simultaneous versus Separate Measurements 242
3.7.2. Signal-to-Noise Ratio 244
3.8. Applications 245
3.8.1. Laser Diagnostics 245
3.8.2. Solid-state Systems 246
3.8.3. Solutions: Molecular Relaxation in Solvents 247
3.8.4. Biological Systems 249
3.8.5. X-Ray Streak Cameras: Fusion Reactions 252
3.9. The Future 254
3.9.1. The 0.1–20-ps Time Regime 254
3.9.2. Integrated Detection Systems 255
3.9.3. Time-Resolved Photon-Counting Streak Cameras (TRPCSC) 255
References 256

4. Time-Resolved Fluorescence Spectroscopy Using Synchrotron Radiation

Ian H. Munro and Margaret M. Martin

4.1. Introduction 261
4.2. Proteins and Peptides 262
4.2.1. Lumazine 263
4.2.2. Angiotensin II 266
4.2.3. Lactate Dehydrogenase 270
4.3. Photosynthesis 272
4.4. Membranes 276
4.4.1. Diphenylhexatriene 276
4.4.2. Triazine Dyes 279
4.5. Excited State Processes 281
4.5.1. Host/Guest Complexes 282
4.5.2. Stilbene 283
4.5.3. The Vacancy in Diamond 286
References 289

5. Frequency-Domain Fluorescence Spectroscopy

Joseph R. Lakowicz and Ignacy Gryczynski

5.1. Introduction 293
5.2. Comparison of Time- and Frequency-Domain Fluorometry. 294
5.2.1. Intensity Decays 294
5.2.2. Anisotropy Decays 298
5.3. Theory of Frequency-Domain Fluorometry. 302
5.3.1. Decays of Fluorescence Intensity 302
5.3.2. Decays of Fluorescence Anisotropy 304
5.4. Instrumentation and Applications. 305
5.4.1. FD Instruments with Intensity-Modulated Light Sources 305
5.4.2. A 2-GHz Harmonic Content FD Instrument 309
5.4.3. Resolution of Anisotropy Decays 316
5.5. Future Developments 326
5.6. Summary 331
References 331

6. Fluorescence Correlation Spectroscopy

Nancy L. Thompson

6.1. Introduction 337
6.2. Conceptual Basis and Theoretical Background. 337
6.3. Experimental Apparatus and Methods. 343
6.4. Analysis of Autocorrelation Function Magnitudes. 351
6.4.1. Number Densities. 351
6.4.2. Molecular Weights 352
6.4.3. Molecular Aggregation and Polydispersity 353
6.5. Analysis of Autocorrelation Function Temporal Decays. 354
6.5.1. Translational Diffusion 354
6.5.2. Flow and Sample Translation. 357
6.5.3. Kinetic Rate Constants 359
6.6. Special Versions of FCS 361
6.6.1. Nonideal Solutions. 361
6.6.2. Rotational Diffusion. 362
6.6.3. Total Internal Reflection Illumination 364
6.6.4. High-Order Autocorrelation 369
6.6.5. Cross-Correlation 373
6.7. Summary and Future Directions. 374
References 374

7. Fundamentals of Fluorescence Microscopy

Robert A. White. Karl J. Kutz, and John E. Wampler

7.1. Introduction 379
7.1.1. Sensitivity and Its Limitations 382
7.1.2. Visualization versus Quantitation 382
7.2. The Illumination Light Path of the Fluorescence Microscope 384
7.2.1. Lamps 386
7.2.2. Lamp Housing 387
7.2.3. Auxiliary and Alternative Optics 389
7.2.4. The Objective Lens as Condenser 397
7.2.5. Specimen and Mount 397
7.3. The Imaging Light Path in Fluorescence Microscopy 398
7.3.1. The Specimen as an Optical Component 398
7.3.2. The Objective 399
7.3.3. Optics between Objective and Eyepiece 402
7.3.4. Role and Position of Ocular 403
7.3.5. Detector Placement for Electronic Imaging and Photometry 403
References 407

8. Flow Cytometry and Cell Sorting

Laszlo Matyus and Michael Edidin

8.1. Introduction/History 411
8.2. Operation of Flow Cytometers 413
8.2.1. Sample Handling and Delivery Systems 416
8.2.2. The Nozzle and the Sheath Fluid 416
8.2.3. Light Sources 417
8.2.4. The "Intersection Point" 418
8.2.5. Detectors 420
8.2.6. Electronics 423
8.2.7. Data Analysis and Storage 424
8.2.8. Slit-Scan Flow Cytometry 425
8.2.9. Cell Sorting 427
8.3. Parameters of Flow Cytometry 428
8.3.1. Light Scatter 428
8.3.2. Fluorescence 428
8.4. Conclusion 439
References 440
