1. Fluorescence Anisotropy: Theory and Applications

Robert F. Steiner

| | |
|--|----|
| 1.1. Introduction | 1 |
| 1.2. Theory | 2 |
| 1.2.1. Meaning of Anisotropy | 2 |
| 1.2.2. Influence of Excitation Pulse Shape | 5 |
| 1.2.3. The Time Decay of Anisotropy | 6 |
| 1.2.4. The Rotational Diffusion of Ellipsoids of Revolution | 8 |
| 1.2.5. The Anisotropy Decay of Ellipsoidal Particles | 10 |
| 1.2.6. Partially Immobilized Systems | 14 |
| 1.2.7. The Influence of Internal Rotation | 18 |
| 1.3. Experimental Analysis of Anisotropy Decay | 22 |
| 1.3.1. Analysis of Time-Domain Data | 22 |
| 1.3.2. Time-Domain Measurements of Anisotropy Decay | 25 |
| 1.3.3. Frequency-Domain Measurements of Anisotropy Decay | 26 |
| 1.4. Anisotropy Decay of Heterogeneous Systems | 28 |
| 1.4.1. Anisotropy-Resolved Emission Spectra | 28 |
| 1.4.2. The Meaning of Correlation Times for Associative and Nonassociative Heterogeneity | 31 |
| 1.5. Anisotropy Decay of Intrinsic Protein Fluorophores | 32 |
| 1.5.1. Anisotropy Decay of a Rigid Protein: <i>S. Nuclease</i> | 32 |
| 1.5.2. Rotational Dynamics of Flexible Polypeptides: Adreno- corticotropin and Melittin | 33 |
| 1.5.3. Anisotropy Decay of a Tightly Bound Fluorophore: Lumazine Protein | 37 |
| 1.5.4. Anisotropy Decay of a Transfer RNA | 39 |
| 1.6. Anisotropy Decay of Biopolymers Labeled with an Extrinsic Fluorophore | 41 |
| 1.6.1. Anisotropy Decay and Internal Flexibility of Myosin | 41 |
| 1.6.2. Anisotropy Decay of a Fibrous Protein: F-Actin | 43 |
| 1.6.3. Anisotropy Decay for Proteins Displaying Internal Rotation Involving a Well-Defined Domain: The Immunoglobulins .. | 44 |

| | |
|--|----|
| 1.6.4. Anisotropy Decay of Calmodulin Complexes with TNS | 48 |
| References | 51 |

2. Fluorescence Quenching: Theory and Applications

Maurice R. Eftink

| | |
|--|-----|
| 2.1. Introduction | 53 |
| 2.2. Basic Concepts. | 55 |
| 2.2.1. The Stern–Volmer Equation | 55 |
| 2.2.2. Quenching Mechanisms and Efficiency | 58 |
| 2.2.3. Diffusional Nature of Quenching | 60 |
| 2.2.4. Static Quenching. | 64 |
| 2.2.5. Various Quenchers | 67 |
| 2.3. Quenching Studies with Proteins. | 68 |
| 2.3.1. Exposure of Fluorophores | 68 |
| 2.3.2. Effect of the Macromolecule's Size | 68 |
| 2.3.3. Electrostatic Effects. | 71 |
| 2.3.4. Tryptophan Residues in Proteins | 72 |
| 2.3.5. Ligand Binding and Conformational Changes | 75 |
| 2.3.6. Mechanism of Quenching in Proteins—Penetration versus Unfolding Mechanisms | 78 |
| 2.3.7. Interaction of Quenchers with Proteins. | 85 |
| 2.3.8. Transient Effects | 87 |
| 2.3.9. Multiple Quenching Rate Constants and Fluorescence Lifetimes | 91 |
| 2.4. Studies with Membranes and Nucleic Acids | 92 |
| 2.4.1. Partitioning of Quenchers into Membranes/Micelles | 92 |
| 2.4.2. Two-Dimensional Diffusion in Membranes. | 96 |
| 2.4.3. Quencher Moieties Attached to Lipid Molecules. | 97 |
| 2.4.4. Membrane Transport and Surface Potential. | 99 |
| 2.4.5. Nucleic Acids. | 100 |
| 2.5. Uses to Resolve Other Fluorescence Properties | 101 |
| 2.5.1. Resolution of Steady-State Spectra. | 102 |
| 2.5.2. Resolution of Fluorescence Lifetimes. | 103 |
| 2.5.3. Resolution of Anisotropy Measurements. | 105 |
| 2.5.4. Resolution of Energy Transfer Experiments | 108 |
| 2.5.5. Other Uses of Solute Quenching. | 109 |
| 2.6. Recent Developments in Data Analysis | 112 |
| 2.6.1. Simultaneous Analyses of Quenching Data. | 112 |
| 2.6.2. Nonlinear Least-Squares Fits | 113 |
| 2.6.3. Distribution of Lifetimes or Rate Constants | 114 |
| 2.6.4. Experimental Improvements | 116 |

| | |
|--------------------------------------|-----|
| 2.7. Phosphorescence Quenching | 117 |
| 2.8. Conclusion | 120 |
| References | 120 |

3. Resonance Energy Transfer

Herbert C. Cheung

| | |
|---|-----|
| 3.1. Long-Range Dipole–Dipole Interaction..... | 128 |
| 3.2. Determination of Energy Transfer, | 130 |
| 3.3. Proximity Mapping of Molecular Assembly | 132 |
| 3.4. Experimental Strategy | 132 |
| 3.4.1. Sample Preparation | 132 |
| 3.4.2. Measurement of Transfer Efficiency..... | 133 |
| 3.4.3. The Orientation Factor | 135 |
| 3.5. Selected Applications | 140 |
| 3.5.1. Myosin and Actomyosin | 140 |
| 3.5.2. Troponin Subunits | 145 |
| 3.5.3. Ribosomal Proteins | 147 |
| 3.6. Comparison of FRET Results with Results from Other Techniques | 148 |
| 3.6.1. Comparison with Crystallographic Data..... | 148 |
| 3.6.2. Comparison with Cross-Linking Data..... | 151 |
| 3.7. Application of FRET to Enzyme Kinetics..... | 152 |
| 3.8. Time-Resolved Energy Transfer Measurements..... | 155 |
| 3.9. Distribution of Distances | 157 |
| 3.9.1. Theory | 158 |
| 3.9.2. Examples | 161 |
| 3.10. Summary and Prospects | 170 |
| References | 171 |

4. Least-Squares Analysis of Fluorescence Data

Martin Straume, Susan G. Frasier-Cadoret, and Michael L. Johnson

| | |
|--|-----|
| 4.1. Introduction | 177 |
| 4.2. Basic Terminology..... | 179 |
| 4.3. Assumptions of Least-Squares Analysis | 181 |
| 4.4. Least-Squares Parameter Estimation Procedures..... | 186 |
| 4.4.1. Modified Gauss–Newton Algorithm..... | 187 |
| 4.4.2. Nelder–Mead Simplex Algorithm | 193 |
| 4.5. An Example of the Least-Squares Procedures—Collisional Quenching | 199 |

| | |
|---|-----|
| 4.5.1. Example of the Gauss–Newton Procedure | 202 |
| 4.5.2. Example of the Nelder–Mead Simplex Procedure | 205 |
| 4.6. Joint Confidence Intervals—Estimation and Propagation. | 207 |
| 4.6.1. Asymptotic Standard Errors | 208 |
| 4.6.2. Linear Joint Confidence Intervals. | 208 |
| 4.6.3. Support Plane Confidence Intervals. | 209 |
| 4.6.4. Approximate Nonlinear Support Plane Joint Confidence Intervals | 211 |
| 4.6.5. A Monte Carlo Method for the Evaluation of Confidence Intervals | 214 |
| 4.6.6. Propagation of Confidence Intervals | 215 |
| 4.7. Analysis of Residuals. | 216 |
| 4.7.1. Plots | 218 |
| 4.7.2. Distributions | 221 |
| 4.7.3. Trends | 226 |
| 4.7.4. Outliers | 228 |
| 4.7.5. Influential Observations. | 229 |
| 4.7.6. Common Quantitative Tests | 230 |
| 4.8. Implementation Notes | 235 |
| 4.9. In Summary | 238 |
| References | 239 |

5. The Global Analysis of Fluorescence Intensity and Anisotropy Decay Data: Second-Generation Theory and Programs

Joseph M. Beechem, Enrico Gratton, Marcel Ameloot, Jay R. Knutson, and Ludwig Brand

| | |
|---|-----|
| 5.1. Introduction | 241 |
| 5.1.1. Multiexcitation/Multitemperature Studies of Anisotropic Rotation | 242 |
| 5.1.2. Multiexcitation/Emission Wavelength Studies of Total Intensity Data. | 243 |
| 5.1.3. Double-Kinetic Studies | 244 |
| 5.2. The Global Analysis Philosophy. | 244 |
| 5.2.1. Evolution of the Global Analysis Approach | 244 |
| 5.2.2. Global Analysis Implementation Strategy. | 248 |
| 5.3. General Elements of the Global Analysis Program. | 249 |
| 5.3.1. Mapping to the Physical Observables | 252 |
| 5.3.2. Empirical Description of the Fluorescence Decay | 252 |
| 5.3.3. Compartmental Description of Photophysical Events. | 253 |
| 5.3.4. Overview of Nonlinear Minimization (The Basic Equations) | 258 |

| | |
|---|-----|
| 5.4. In-Depth Flow Chart of a General-Purpose Global Analysis Program | 259 |
| 5.4.1. Overview of the Global Analysis Procedure | 259 |
| 5.4.2. Flow Chart for the LFD Global Analysis Program "Global" | 260 |
| 5.5. Case Studies of the Application of Global Analysis to Experimental Data | 272 |
| 5.5.1. Case Study of a Two-State Excited State Reaction | 272 |
| 5.5.2. Distributions of Distances and Energy Transfer Analysis ... | 277 |
| 5.6. Anisotropy Decay Data Analysis | 280 |
| 5.6.1. General Equations and Experimental Linkages | 280 |
| 5.6.2. Changes in Anisotropy Data Collection Schemes..... | 283 |
| 5.6.3. Associative versus Nonassociative Modeling of Anisotropy | 283 |
| 5.6.4. Anisotropy Decay-Associated Spectra (ADAS) | 284 |
| 5.6.5. Multidye Global Anisotropy Decay Analysis | 285 |
| 5.6.6. Distributed Lifetimes and Distributed Rotational Correlation Times | 285 |
| 5.6.7. Multiexcitation Anisotropy Experiments..... | 286 |
| 5.6.8. Example of Distributed Rotations: Fluorophore Rotations Gated by Packing Fluctuations in Lipid Bilayers..... | 287 |
| 5.7. Error Analysis and the Identifiability Problem | 288 |
| 5.7.1. The Identifiability Problem | 288 |
| 5.7.2. Identifiability Study Using Laplace Identifiability Analysis . | 291 |
| 5.7.3. Error Analysis | 294 |
| 5.8. Conclusions | 298 |
| References | 301 |

6. Fluorescence Polarization from Oriented Systems

Thomas P. Burghardt and Katalin Ajtai

| | |
|---|-----|
| 6.1. Overview | 307 |
| 6.2. Theory and Application | 308 |
| 6.2.1. The Angular Probability Density N | 309 |
| 6.2.2. Fluorescence Polarization in Homogeneous Space | 311 |
| 6.2.3. Time-Resolved Fluorescence Depolarization Determination of the High-Resolution Angular Probability Density..... | 320 |
| 6.2.4. Relation of Electron Spin Resonance Spectra to Fluorescence Polarization | 331 |
| 6.2.5. Biochemical Techniques of Specific Labeling | 332 |
| 6.3. Discussion | 338 |
| References | 340 |

7. Fluorescence-Based Fiber-Optic Sensors

Richard B. Thompson

| | |
|---|-----|
| 7.1. Introduction | 345 |
| 7.2. Fiber-Optic Fundamentals | 346 |
| 7.3. Sensor Design | 349 |
| 7.4. Sensing Tip Configurations | 350 |
| 7.5. Fiber Characteristics | 353 |
| 7.6. Separating Excitation and Emission | 357 |
| 7.7. Launching Optics | 359 |
| 7.8. Light Sources | 359 |
| 7.9. Time-Resolved Fluorescence in Fibers | 361 |
| 7.10. Polarization | 362 |
| 7.11. Conclusion | 362 |
| References | 363 |

8. Inhomogeneous Broadening of Electronic Spectra of Dye Molecules in Solutions

Nicolai A. Nemkovich, Anatolyi N. Rubinov, and Vladimir I. Tomín

| | |
|---|-----|
| 8.1. Introduction | 367 |
| 8.2. Theoretical Considerations of Inhomogeneous Broadening | 369 |
| 8.2.1. Solvate Configurational Energy | 369 |
| 8.2.2. Field Diagram of a Polar Solution | 371 |
| 8.2.3. Solvate Distribution in Configurational Sublevels | 374 |
