## 1. Tyrosine Fluorescence and Phosphorescence from Proteins and Polypeptides

J. B. Alexander Ross, William R. Laws, Kenneth W. Rousslang, and Herman R. Wyssbrod

1.1. Historical Perspective and Background .....	1
1.2. The Absorption Properties of <b>Tyrosine</b> .....	2
1.3. The Excited Singlet and Triplet States of <b>Tyrosine</b> and Tyrosinate .....	3
1.3.1. The Zero-Field <b>Splittings</b> of the Triplet State .....	5
1.3.2. Excited-State Decay Kinetics .....	7
1.4. Quenching Mechanisms of <b>Tyrosine</b> Emission in Polypeptides and Proteins .....	12
1.4.1. The <b>Peptide</b> Bond .....	12
1.4.2. Singlet–Singlet and Triplet–Triplet Resonance Energy Transfer .....	13
1.4.3. <b>Disulfide</b> Bonds and <b>Sulfhydryl</b> Groups .....	17
1.4.4. Interactions with Ionizable Side Chains and Proton Acceptors .....	20
1.5. Emission from Polypeptides and Proteins .....	21
1.5.1. Fluorescence of <b>Tyrosine</b> .....	22
1.5.2. Fluorescence of <b>Tyrosinate</b> .....	43
1.5.3. Phosphorescence and ODMR of Proteins and Polypeptides .....	50
1.6. <b>Tyrosine</b> as an Excited-State Probe for Conformation and Dynamics .....	52
References .....	53

## 2. Fluorescence and Dynamics in Proteins

A. P. Demchenko

2.1. Introduction .....	65
2.2. Dynamics in Proteins .....	68
2.2.1. Structural Hierarchy and Degrees of Mobility .....	68

2.2.2. Distribution of Microstates . . . . .	70
2.2.3. Analysis of Motions Using Time-Resolved Methods. . . . .	71
2.3. Decay and Quenching of Fluorescence. . . . .	74
2.3.1. Emission Decay Kinetics . . . . .	74
2.3.2. Fluorescence Quenching by Intrinsic Quenchers . . . . .	77
2.3.3. Fluorescence Quenching by Extrinsic Quenchers. . . . .	78
2.4. Rotation of Aromatic Groups . . . . .	81
2.4.1. Fluorescence Polarization Studies with and without Time Resolution . . . . .	81
2.4.2. Models of Rotations. . . . .	83
2.5. Fluorescence Spectroscopy of Molecular Relaxation . . . . .	85
2.5.1. Dynamic Reorientation of Dipoles in the Fluorophore Environment. . . . .	85
2.5.2. The Two-State Model of Relaxation . . . . .	87
2.5.3. Continuous Model of Relaxation . . . . .	88
2.5.4. Site-Photoselection Model. . . . .	91
2.6. Molecular Relaxation and Dynamics of Dipoles in the Protein Globule . . . . .	95
2.6.1. Relaxational Shift of Steady-State Spectra. . . . .	95
2.6.2. Time-Resolved Spectra. . . . .	96
2.6.3. Red-Edge Excitation Spectroscopy. . . . .	97
2.7. Conclusion and Future Prospects. . . . .	104
References . . . . .	106
3. Tryptophan Phosphorescence from Proteins at Room Temperature	
Jane M. Vanderkooi	
3.1. Background . . . . .	113
3.2. Triplet State Formation and Disappearance . . . . .	114
3.2.1. Energy Diagram . . . . .	114
3.2.2. General Considerations of Phosphorescence Yield. . . . .	115
3.2.3. Measurement of Phosphorescence . . . . .	116
3.3. Tryptophan Phosphorescence Emission from Proteins . . . . .	117
3.3.1. Comparison of Fluorescence and Phosphorescence Emission Spectra. . . . .	117
3.3.2. Delayed Fluorescence. . . . .	118
3.3.3. Lifetime of Tryptophan Phosphorescence in Proteins . . . . .	119
3.3.4. What Affects the Phosphorescence Lifetime? . . . . .	121
3.3.5. Phosphorescence Quenching by External Molecules. . . . .	123
3.3.6. Phosphorescence Lifetimes to Measure Conformational Changes in Proteins . . . . .	128
3.4. Phosphorescence Anisotropy and Rotational Motion . . . . .	130

34.1. Phosphorescence Anisotropy.....	130
34.2. Anisotropy to Study Proteins .....	131
35. Tryptophan Phosphorescence from Cells.....	131
36. Conclusions .....	132
References .....	132

#### 4. Fluorescence Studies of Nucleic Acids: Dynamics, Rigidities, and Structures

J. Michael Schurr, Bryant S. Fujimoto, Pengguang Wu, and Lu Song

4.1. Introduction .....	137
4.2. Rotational Dynamics of DNA.....	138
4.2.1. Background .....	138
4.2.2. Pertinent Questions and Problems.....	140
4.2.3. Theory .....	145
4.2.4. Instrumentation .....	169
4.2.5. Protocol and Data Analysis.....	170
4.2.6. Experimental Results .....	172
4.3. Rotational Dynamics of DNA in Nucleosomes. Chromatin. Viruses, and Sperm .....	211
4.3.1. Nucleosomes .....	211
4.3.2. Chromatin .....	213
4.3.3. Viruses .....	214
4.3.4. Sperm .....	214
4.4. Steady-State Studies of DNA Dynamics.....	215
4.5. DNA Dynamics by Fluorescence Microscopy.....	216
4.6. Dynamics of tRNAs .....	218
4.6.1. Ethidium Fluorescence.....	218
4.6.2. Wyebutine Fluorescence .....	220
4.7. Summary and Outlook.....	222
References .....	222

#### 5. Fluorescence in Membranes

Christopher D. Stubbs and Brian Wesley Williams

5.1. Introduction .....	231
5.2. Fluorescence Lifetimes.....	232
5.2.1. The Use of Fluorescence Lifetimes for Membrane Organizational Studies.....	232
5.2.2. Fluorescence Lifetime Distributions.....	233
5.2.3. Excimer Probes.....	239

5.3. Fluorescence Anisotropy .....	239
5.3.1. Anisotropy Parameters. ....	240
5.3.2. Time-Resolved Anisotropy .....	241
5.3.3. Applications to Membrane Studies. ....	245
5.3.4. Fluorescent Probes for Lifetime and Anisotropy Studies. ....	246
5.4. Fluorescence Energy Transfer .....	248
5.4.1. Surface Distribution of Fluorophore-Labeled Lipids. ....	249
5.4.2. Location of the Longitudinal and Lateral Position of Membrane Proteins .....	251
5.4.3. Protein-Protein Associations .....	252
5.5. Fluorescence Quenching. ....	252
5.5.1. Determination of Partitioning and Binding of Fluorophore Quenchers to Membranes .....	253
5.5.2. Location of Fluorophores .....	257
5.6. Solvent Relaxation. ....	257
5.7. Surface Charge. ....	259
5.8. Future Directions .....	262
References .....	263

## 6. Fluorescence and Immunodiagnostic Methods

Thomas M. Li and Richard F. Parrish

6.1. Introduction .....	273
6.2. Assay Formats. ....	274
6.3. Fluorescence Polarization Immunoassay .....	274
6.4. Substrate-Labeled Fluorescent Immunoassay .....	276
6.5. Intra-Molecularly Quenched Fluorescent Immunoassay .....	278
6.6. Homogeneous Fluorescent Immunoassay in a Dry Reagent Format .....	281
6.7. Fluorescence Excitation Transfer Immunoassay .....	281
6.8. Design of Fluorescent Probes .....	282
6.9. Phycobiliproteins .....	284
6.10. Phase-Resolved Fluorescence Immunoassay .....	285
6.1.1. Time-Resolved Fluorescence Immunoassay .....	286
6.12. Conclusion .....	286
References .....	287

## 7. Total Internal Reflection Fluorescence

Daniel Axelrod, Edward H. Hellen, and Robert M. Fulbright

7.1. Introduction .....	289
7.2. Theory of TIR Excitation. ....	290

7.2.1. Single Interface . . . . .	290
7.2.2. Intermediate Layer . . . . .	295
7.3. Emission by Fluorophores near a Surface . . . . .	298
7.3.1. Description of the Model. . . . .	299
7.3.2. Mathematical and Physical Basis . . . . .	300
7.3.3. Graphical Results . . . . .	304
7.3.4. Theoretical Results for a Distribution of Dipoles: Random Orientations. . . . .	309
7.3.5. Consequences for Experiments . . . . .	310
7.4. TIRF for a Microscope. . . . .	313
7.4.1. Inverted Microscope. . . . .	314
7.4.2. Upright Microscope . . . . .	316
7.4.3. Prismless TIRF . . . . .	316
7.4.4. TIRF Interference Fringes. . . . .	317
7.4.5. General Experimental Suggestions . . . . .	319
7.5. Applications of TIRF . . . . .	320
7.5.1. Binding of Proteins and Probes to Artificial Surfaces . . . . .	320
7.5.2. Concentration of Molecules near Surfaces. . . . .	323
7.5.3. Orientation, Rotation, and Fluorescence Lifetime of Molecules near Surfaces. . . . .	324
7.5.4. Qualitative Observation of Labeled Cells . . . . .	326
7.5.5. Fluorescence Energy Transfer and TIRF. . . . .	329
7.5.6. Reaction Rates at Biosurfaces. . . . .	330
7.5.7. TIRF Combined with Fluorescence Correlation Spectroscopy (FCS) . . . . .	334
7.6. Summary and Comparisons. . . . .	335
References . . . . .	337

## 8. Microparticle Fluorescence and Energy Transfer

L. M. Folan and S. Arnold

8.1. Introduction . . . . .	345
8.1.1. Fluorescence from a Microparticle. . . . .	345
8.1.2. Nature of the Effects. . . . .	346
8.2. Excitation Spectroscopy . . . . .	347
8.2.1. Interaction of a Plane Wave with a Sphere . . . . .	347
8.2.2. Excitation of a Dipole and Photoselection . . . . .	352
8.2.3. Experiments . . . . .	356
8.3. Emission Spectroscopy . . . . .	366
8.3.1. Interaction between an Excited Electronic State and a Microsphere: Radiative and Nonradiative Decay Rates . . . . .	366
8.3.2. Angular Intensity Distribution . . . . .	370

8.3.3. Energy Transfer.....	371
8.3.4. Experiments .....	376
8.4. Conclusions .....	384
References .....	384
<b>Index .....</b>	<b>387</b>
