

CONTENTS

1. The Present Status of Diffuse Reflectance Theory.	1
2. Theory of Some of the Discrepancies Observed in Application of the Kubelka-Munk Equations to Particulate Systems.	27
3. Diffuse Reflectance Spectroscopy -- A Quantitative Technique for Characterizing Ligand Field Spectra.	47
4. High Temperature Reflectance Spectroscopy and Dynamic Reflectance Spectroscopy.	53
5. Techniques and Attachments for a Hohlraum-Type Infrared Reflectance Spectrophotometer.	70
6. Analysis by Means of Spectral Reflectance of Substances Resolved on Thin Plates.	88
7. Reflectance Variables of Compacted Powders.	107
8. Standardization of Monochromatic and Abridged Spectrophotometers.	132
9. Instruments for Reflectance Spectroscopy.	143
10. Some New Diffuse and Specular Reflectance Accessories for the Cary Models 14 and 15 Spectrophotometer.	158
11. Current Status of Internal Reflectance spectroscopy.	170
12. Spectroscopic Observation of an Electrochemical Reaction by Means of Internal Reflection.	182
13. Three Unusual Applications of Internal Reflection Spectroscopy: Identification of GC Fractions, Pyrolysis and Skin Analysis.	192
14. Enhanced Sensitivity for Internal Reflection Spectroscopy.	207
15. Infrared Examination of Micro Samples Using Reflectance Techniques.	216
16. Determination of True Infrared Absorption Frequencies from Internal Reflection Data.	218
17. High Resolution Goniophotometer and its Use to Measure Appearance Properties and Light Scattering Phenomena.	226
18. A New Method of Sample Preparation for Infrared ATR Spectrophotometry.	242
19. Infrared Spectral Reflectance Independent of Emitted Flux at Controlled Temperatures.	243
20. Precision and Accuracy of Spectrophotometric Reflectance Measurements.	244
21. Infrared Investigations of the Structure of Non-Oxide Chalcogenide Glasses.	245
