

CONTENTS OF VOLUME 2

Chapter 1	Applications of Centrifugal Fast Analyzers to Fluorescence and Chemiluminescence Analyses	1
Chapter 2	Applications of Luminescence Spectroscopy to Quantitative Analyses in Clinical and Biological Samples	49
Chapter 3	Fluorescent Probing of Dynamic and Molecular Organization of Biological Membranes	91
Chapter 4	The Application of Fluorescence Techniques to the Study of Micellar Systems	169
Chapter 5	Fluorescent Probe Studies of Binding Sites in Proteins and Enzymes	217
Chapter 6	Acid-Base Chemistry of Excited Singlet States: Fundamentals and Analytical Implications	239
Chapter 7	Use of Fluorescence to Study Structural Changes and Solvation Phenomena in Electronically Excited Molecules	277
Chapter 8	The Study of Excited State Complexes (“Exciplexes”) by Fluorescence Spectroscopy	319
