

Contents

Study Guide	xiii
Supporting Practical Work	xvii
Bibliography	xix
1. Basic Principles of Solution Chemistry and Electrochemistry	1
1.1. Ions in Solution.	2
1.2. Ion-Ion Interactions	13
1.3. Ionic Migration in Electrolyte Solutions	25
1.4. An Introduction to Electrodes and the Electrochemical Cell	33
2. Galvanic Cells.	42
2.1. Galvanic Cells	43
2.2. Electrode Types.	46
2.3. IUPAC Conventions	61
2.4. The Nernst Equation	72
2.5. The Liquid Junction	77
2.6. EMF Measurement	82
2.7. pH and its Measurement	88
2.8. Potentiometry – an Introduction	93
3. Electrolysis	106
3.1. Electrolysis Cell, Overpotential, Micro- and Macro-Electrolysis	106
3.2. Three Electrode Circuitry, the Potentiostat and Cell Design	119
3.3. The Electrodes, Solvent and Supporting Electrolyte System	135
3.4. Introduction to Voltammetry at Finite Current	157
3.5. Principles of Voltammetric Methods	167

4. Review of Methods of Electro-analytical Chemistry .	187
4.1. Classification and Relationships.	187
4.2. Principles of the More Important Methods	191
4.3. Present Usage	200
Self Assessment Questions and Responses.	201
Units of Measurement	245
