Chapter 1 Introduction and Practical Considerations of Two-Dimensional NMR Spectroscopy	1
Introduction	1
Fundamental Segments of Two-Dimensional NMR Experiments	3
Preparation	3
Evolution	3
Mixing	4
Detection	4
NMR Data in Two Time Domains: How Information Gets There	5
Evolution Times	5
Encoding Spin-Lattice (T_1) Relaxation Information via an Evolution Period	7
Encoding Spin Coupling Information via Evolution Periods	9
Dwell Times: Control of Spectral Width in the Second Dimension	12
Data Processing Beyond the First Fourier Transformation	13
Transposition	13
The Second Fourier Transformation	14
Data Presentation	15
Whitewashed Stack Plots	17
Contour Plots	17
Projections	19
Two-Dimensional J-Resolved NMR Spectroscopy	19
Heteronuclear Two-Dimensional J-Resolved Spectroscopy	20
Homocuclear Two-Dimensional J-Resolved Spectroscopy	26
Pulse Width Calibration and Specialized Pulses	30
Pulse Width Calibration	30
Pulse Width versus Spectral Width	30
Relaxation Times and Pulse Calibration	32
Observation (Transmitter) Pulses	32
Calibration of Decoupler Pulses for Heteronuclear Experiments	36
Calibration of X-Band Decoupler Pulses	40
Composite Pulses and Specialized Pulse Clusters	41
Composite Pulses	42
Pulse Operators: BIRD and TANGO Pulses	46
References	55
Chapter 2 Establishing Proton-Proton Connectivities	58
Classical Proton Homonuclear Decoupling	58
Autocorrelated Homonuclear Proton COSY Experiments	58
Introduction	59
The Basic COSY Experiment	59
Phase Cycling	60
Parameter Selection	62
Data Processing and Presentation	63
Interpretation of COSY Spectra	69
Variants of the Basic COSY Experiment	86

Phase Sensitive COSY	86
Long Range COSY (LRCOSY)	89
Broadband Proton Decoupled COSY (HDCOSY)	91
Super COSY	92
Edited COSY Spectra Incorporating BIRD Pulses	94
Spin-Echo Correlated Spectroscopy (SECSY)	94
Multiple Quantum Filtered COSY Experiments	95
Multiple Quantum Filtration	96
Phase Sensitive Double Quantum Filtered COSY	107
Higher Order Multiple Quantum Filtered COSY	109
Applications of Multiple Quantum Filtered COSY	109
Other Quantum Methods for Establishing Proton-Proton Connectivities	109
Proton Double Quantum Coherence	109
Location of Response in Proton Double Quantum 2D NMR Spectra	113
The Proton Double Quantum Pulse Sequence and Phase Cycling	117
Parameter Selection and Experiment Execution	119
Proton Double Quantum Data Processing	122
Presentation of Proton Double Quantum Spectra	124
Quadrature Data Acquisition in the Second Frequency Domain	125
Interpretation of Proton Double Quantum Spectra	126
Strategy in Recording Proton Double Quantum Spectra	134
Alternative Proton Double Quantum Pulse Sequences	134
A Brief Survey of Proton Double Quantum Applications	135
Proton Zero Quantum Coherence	136
The Proton Zero Quantum Pulse Sequence and Phase Cycling	137
Location of Responses in Proton Zero Quantum 2D-NMR Spectra	140
Parameter Selection and Experiment Execution	143
Proton Zero Quantum Data Processing	144
Interpretation of Proton Zero Quantum Spectra	145
Presentation of Proton Zero Quantum Spectra	149
Alternative Zero Quantum Pulse Sequences	152
A Brief Survey of Proton Zero Quantum Applications	157
References	157
Chapter 3 Heteronuclear Chemical Shift Correlation	162
Classical Methods for Establishing Heteronuclear Correlation	162
Spin Population Inversion/Transfer (SPI/SPT) Experiments	164
Nonselective Polarization Transfer	165
Proton Carbon Heteronuclear Chemical Shift Correlation	170
Heteronuclear Chemical Shift Correlation: The Basic Experiment; Heteronuclear Coupling on Both Frequency Axes	171
Heteronuclear Chemical Shift Correlation: Heteronuclear Decoupling in the F_2 Frequency Domain	172
Heteronuclear Chemical Shift Correlation: Broadband Heteronuclear Decoupling in the F_1 Frequency Domain	175
Phase Cycling	176
Parameter Selection	178
Pulse Widths	179
Dwell Time Selection	179
Digitization in the F_1 Frequency Domain	181

Digitization in the F_2 Frequency Domain	181
Optimal Fixed Delay (Δ_1 and Δ_2) Durations	181
Selection of an Interpulse Delay	183
Data Processing	183
The First Fourier Transformation	184
Transposition	185
The Second Fourier Transformation	187
Other Processing Considerations	187
Artifacts and Spurious Responses	190
"Virtual Coupling" in Heteronuclear Chemical Shift Correlation Spectra	190
Doublets in F_1 Rather than Singlets as a Result of Isotopomeric Breaking of Proton Chemical Shift Degeneracy	192
DEPT Based Heteronuclear Chemical Shift Correlation	195
Sequences Leading to DEPT Based Heteronuclear Chemical Shift Correlation	195
Heteronuclear Chemical Shift Correlation Using the DEPT Sequence	197
Reorganization of the DEPT Based Heteronuclear Chemical Shift Correlation Sequence	198
Spectral Editing Using the DEPT Based Heteronuclear Chemical Shift Correlation Experiment	199
Phase Cycling	200
Other DEPT Based Heteronuclear Chemical Shift Correlation Variants and Applications	200
Heteronuclear Chemical Shift Correlation with Broadband Homonuclear Proton Decoupling via Bilinear Rotational Decoupling	201
INEPT Based Polarization Transfer	201
Phase Cycling	203
Parameter Selection	203
Data Processing	203
Examples of the Application of Broadband Homonuclear Proton Decoupling in Heteronuclear Chemical Shift Correlation	203
Norharmane	204
9-Methylphenanthro[4,3-a]dibenzothiophene	204
Strychnine	204
DEPT Based Polarization Transfer	208
Parameter Selection	208
Phase Cycling	210
Variations	211
Heteronuclear Chemical Shift Correlation with Broadband Proton Homonuclear Decoupling via a Constant Evolution Time	211
Parameter Selection	211
Phase Cycling	212
Proton Detected (Inverse) Heteronuclear Proton-Carbon Chemical Shift Correlation	213
Introduction	213
Suppression of the Signal for Protons not Directly Bonded to ^{13}C	215
Chemical Shift Correlation via Heteronuclear Multiple Quantum Coherence: "Small" Molecules	216
Phase Cycling	217
Parameter Selection	217
Application to the Cyclic Depsipeptide Didemnim-B	219
Chemical Shift Correlation via Heteronuclear Multiple Quantum	

Coherence: Larger Molecules	219
A Brief Survey of Applications of Chemical Shift Correlation via Heteronuclear Multiple Quantum Coherence	221
Long Range Heteronuclear Chemical Shift Correlation	221
Long Range Optimization of the Conventional Heteronuclear Chemical Shift Correlation Experiment	222
General Considerations of Long Range Heteronuclear Coupling Constants	222
Long Range Optimization of the Heteronuclear Chemical Shift Correlation Sequence of Freeman and Morris	223
Long Range Optimized DEPT	233
Long Range Heteronuclear Correlation Using the Fully Coupled (FUCOUP) Technique	234
Parameter Selection	234
Phase Cycling	235
Data Processing	235
A Brief Survey of Applications of the FUCOUP Experiment	237
A Modification of the FUCOUP Experiment: Introduction of F ₂ Decoupling	237
Modifications Intended to Suppress Direct Responses	237
Replacing Proton 90° Pulses by TANGO Pulses: The CSCMLR Experiment	238
Using Low Pass J-Filters to Remove Direct Responses	240
Decoupling One Bond Modulations in Long Range Heteronuclear Shift Correlation Experiments	244
Suppression of One Bond Modulations in the CSCMLR Sequence by Incorporation of a BIRD Pulse	246
Suppression of One Bond Modulation in the Freeman-Morris Sequence by Insertion of a BIRD Pulse	251
Constant Evolution Time Long Range Heteronuclear Correlation	254
The Bauer, Freeman and Wimperis Constant Evolution Time Long Range Heteronuclear Correlation Experiment	254
The Kessler-Griesinger Correlation by Long Range Coupling (COLOC) Constant Evolution Time Pulse Sequence	255
COLOC-S: A Modified COLOC Experiment Incorporating TANGO and BIRD Pulses	261
The XCORFE Constant Evolution Time Experiment Devised by Reynolds and Coworkers	261
Heteronuclear Multiple Quantum Coherence Long Range Chemical Shift Correlation Experiments	267
The Bax and Summers Long Range Heteronuclear Multiple Quantum Coherence Experiment (HMBC)	267
A Brief Survey of Applications of the Proton Detected Long Range Heteronuclear Multiple Quantum Correlation Experiment	273
References	273

Chapter 4 Relayed Coherence Transfer and Related 2D-NMR Experiments **280**

Introduction	280
Homonuclear Relayed Coherence Transfer via Scalar Coupling Pathways	281
Why Is Relayed Coherence Transfer Useful or Desirable?	281

The Single Relay Experiment: RCOSY	282
Phase Cycling	283
Parameter Selection	284
Data Processing and Presentation	285
Interpretation of RCOSY Spectra	286
A Brief Survey of RCOSY Applications	289
Long Range (Four Bond) Relayed Coherence Transfer	289
Multiple Quantum Filtered Relay: MQF-RELAY	290
Phase Cycling	290
The Double Relay Experiment: 2RCOSY	291
Phase Cycling	291
Parameter Selection	291
Data Processing and Presentation	291
A Comparison of the COSY, RCOSY and 2RCOSY Spectra of Strychnine	293
Multiple Quantum Relayed Coherence Transfer	298
Proton Double Quantum Relayed Coherence Transfer	298
Phase Cycling	299
Parameter Selection	299
Data Processing and Presentation	301
Application of the Proton Double Quantum Relayed Coherence Transfer Experiment to Strychnine	301
Homonuclear Relayed Coherence: Transfer via Scalar Coupling Pathways or by Isotropic Mixing	303
Homonuclear Relayed Coherence Transfer via Isotropic Mixing	303
Total Correlation Spectroscopy: TOCSY	303
Homonuclear Hartmann-Hahn Spectroscopy: HOHAHA	305
Phase Cycling	307
Parameter Selection	308
Data Processing	308
Applications of HOHAHA	308
A Brief Survey of Applications of the HOHAHA Experiment	314
Isotropic Mixing Using Other Sequences	314
TOCSY with Z-Filters	315
Heteronuclear Relayed Coherence Transfer	317
Conventional Heteronuclear Relayed Coherence Transfer	317
Phase Cycling	319
Parameter Selection	319
Efficiency of the Relay Step	320
Data Acquisition, Processing and Presentation	321
Interpretation of Heteronuclear Relayed Coherence Transfer Spectra	321
Applications of HC-RELAY	323
A Brief Survey of Applications of the HC-RELAY Experiment	329
Techniques to Eliminate Direct Responses from Heteronuclear Relayed Coherence Transfer Spectra	329
Low Pass J-Filtered Heteronuclear Relayed Coherence Transfer	329
HC-RELAY With Semiselective Refocusing	332
Heteronuclear Relayed Hartmann-Hahn Spectroscopy	333
Phase Cycling	335
Applications of Heteronuclear Relayed Hartmann-Hahn Spectroscopy	335
Proton Detected (Reverse) Heteronuclear Relayed Coherence Transfer	335
The Bolton Sequence for Proton Detected Heteronuclear Relay	336
The Bax Sequences for Proton Detected Heteronuclear Relay	337
The Bruhwiler-Wagner Proton Detected Heteronuclear Relay Experiment	340

Comparative Evaluation of the Various Proton Detected Heteronuclear Relay Experiments	341
Multiple Quantum Heteronuclear Relayed Coherence Transfer Spectroscopy	341
Proton Double Quantum Heteronuclear Relayed Coherence Transfer	341
Proton Zero Quantum Heteronuclear Relayed Coherence Transfer	343
References	344
Chapter 5 ^{13}C-^{13}C Double Quantum Coherence 2D-NMR The INADEQUATE Experiment	348
Introduction	348
The One-Dimensional INADEQUATE Experiment	349
Parameter Selection	349
Phase Cycling	349
Double Quantum Coherence and the Density Matrix	351
The Two-Dimensional INADEQUATE Experiment	352
Quadrature Detection in the F_1 Dimension Using Composite Z-Pulses	353
Autocorrelated Two-Dimensional INADEQUATE	355
Obtaining Quadrature Detection in F_1 Using a 135° Read Pulse	356
Excitation of Double Quantum Coherence Using "Double Selection"	356
Practical Aspects of Double Quantum NMR Spectroscopy	357
Sample Preparation and Solubility	358
Parameter Selection	358
Data Processing	360
Double Quantum NMR Spectra of Menthol	360
The Conventional INADEQUATE Spectrum of Menthol	360
The Autocorrelated INADEQUATE Spectrum of Menthol Recorded Using the Turner Pulse Sequence	363
Intentionally Folded INADEQUATE Spectra	363
Assembling the Carbon Skeleton of Cedrol Using INADEQUATE Data	365
The INADEQUATE Spectrum of Benzo[3,4]phenanthro[1,2-b]thiophene	371
Parameter Selection for Two-Dimensional INADEQUATE	374
A Brief Survey of Applications of the INADEQUATE Experiment	375
Using Proton Detection to Increase the Sensitivity of the INADEQUATE Technique	377
Assignments of Quaternary Carbons Using Carbon Relayed Proton-Carbon Spectroscopy	377
References	379
Chapter 6 Applications Problems	381
Introduction	381
Homonuclear Correlation Problems	381
6.1 Assignment of the Proton NMR Resonances of a Simple Dinaphthothiophene Derivative	381
6.2 Assignment of the Proton NMR Spectrum of the Sesquiterpene AnnulatoI-A	382
Simultaneous Use of Homo- and Heteronuclear Correlation	384
6.3 Assignment of the Proton NMR Spectrum of the Alkaloid α -Yohimbine with Simultaneous Verification of ^{13}C -NMR Assignments	384

6.4 Identifying Heteronuclear Spin Systems of a Polynuclear Aromatic Using a Combination of Heteronuclear Chemical Shift Correlation and Relayed Coherence Transfer	387
6.5 Assigning the Proton and Carbon-NMR Spectra of the Complex Helicene Phenanthro[3,4:3',4']phenanthro[2,1- <i>b</i>]thiophene Using Long Range Heteronuclear Chemical Shift Correlation	393
Molecular Structure Determination	399
6.6 Elucidation of the Structure of a Marine Sesquiterpene	399
6.7 Elucidation of the Structure of a Complex Alkaloid Using INADEQUATE	405
6.8 Establishing the Structure of a Complex Alkaloid Using Proton-Proton, Proton-Carbon and Long Range Proton-Carbon Connectivity Data	407
6.9 Determination of the Structure of a Dinaphthothiophene Isomer of the Compound Considered in Problem 6.1	407
References	417

Chapter 7 Solutions to Problems 418

Introduction	418
Solution to Problem 6.1	418
Assignment of the Proton NMR Resonances of a Simple Dinaphthothiophene	418
Identification of Resonances in Individual Spin Systems	418
Orienting Spin Systems Relative to One Another	421
Solution to Problem 6.2	423
Assigning the Ring A Protons of Annulatol-A	423
Using the COSY Data	423
Using the Zero Quantum Data	424
Assigning the Ring B Protons of Annulatol-A	428
Solution to Problem 6.3	428
Assignment of the Proton NMR Spectrum of the Alkaloid α -Yohimbine with Simultaneous Verification of the ^{13}C -NMR Assignments	428
Locating a Starting Point	428
Establishing a Heteronuclear Connectivity Network	428
Solution to Problem 6.4	436
Identifying Heteronuclear Spin Systems of a Polynuclear Aromatic Using a Combination of Heteronuclear Chemical Shift Correlation and Heteronuclear Relayed Coherence Transfer	436
Locating a Starting Point	436
Assigning the Two Proton Four Spin Systems and Their Heteronuclear Partners	436
Assigning the Two Proton Two Spin Systems and Their Heteronuclear Partners	440
Conclusions	440
Solution to Problem 6.5	441
Total Assignment of the Proton and Carbon NMR Spectra of the Complex Helicene Phenanthro[3,4:3',4']phenanthro[2,1- <i>b</i>]thiophene	441
Where to Start?	441
Establishing a Heteronuclear Connectivity Network from the Proton Resonating at 8.40 ppm	441
Expanding the Connectivity Network Outward	445
Assigning H14-H17	448
Assigning the Remainder of the Spectrum	450
Solution to Problem 6.6	453

Elucidation of the Structure of a Marine Sesquiterpene	453
Finding a Place to Start	453
Assembly of a Structural Fragment Beginning from the Hydroxyl	
Methine	453
Assembly of a Structural Fragment Beginning from the Bromo Methine	456
What Pieces Are Left?	459
Linking the Structural Fragments With Long Range Heteronuclear	
Connectivity Information from the HMBC Experiment	459
Solution to Problem 6.7	464
Assignment of the Structure of a Complex Alkaloid Using Carbon-Carbon	
INADEQUATE Data	464
Where to Start?	464
Expanding the Connectivity Network Outward from Our Starting Point	464
Connectivities from "d"	465
Connectivities from "e"	465
Connectivities from "h"	467
Connectivities from "l"	468
Linking the Structural Fragment into a Single Unified Structure	469
Solution to Problem 6.8	471
Establishing the Structure of a Complex Alkaloid Using Proton-Proton,	
Proton-Carbon and Long Range Proton-Carbon Connectivity	
Information	471
Where to Begin?	471
Solution to Problem 6.9	482
Determining the Structure of an Isomeric Dinaphthothiophene	482
Preliminary Structural Considerations	482
Interpreting the COSY Data	482
Connectivity Information Provided by the ZQCOSY Experiment	485
Heteronuclear Correlation Data	485
Using the HC-RELAY Data	488
Assigning the Quaternary Carbons	488
Conclusions	489
References	491
Index	493
