

## CONTENTS

<b>Chapter 1 Introduction</b>	<b>1</b>
I. History	1
II. Scope of This Book	4
<b>Chapter 2 Ion Exchanging Materials</b>	<b>7</b>
I. Condensation Polymers	7
II. Addition Polymers	7
III. Ion Exchangers for Chromatography	16
<b>Chapter 3 Properties of Ion Exchange Resins</b>	<b>31</b>
I. Ionic Capacity	31
II. Swelling	32
III. Swelling and Chromatography	36
IV. Salt Uptake	39
V. Equilibrium and Selectivity	40
VI. Elution Volume in Analytical Column Chromatography	43
VII. Gradient Elution	44
VIII. Isocratic Elution and Stationary-Phase Concentration	45
IX. Distribution Coefficients	47
X. Selectivity Orders	48
XI. Kinetics of Ion Exchange	50
XII. Properties of Surface-Functional Resins	52
XIII. Temperature and Ion Exchange	52
<b>Chapter 4 Ion Chromatography</b>	<b>55</b>
I. Ion Chromatography With Conductivity Detection	55
II. Ion Chromatography With Amperometric Detection	77
III. Ion Chromatography With Optical Detection	88
<b>Chapter 5 Ion-Pair Chromatography</b>	<b>99</b>
I. Introduction	99
II. Ion Pairs	101
III. Ion-Pair Extraction	103
IV. Theories of Ion-Pair Chromatography	103
V. Ion-Interaction Model	106
VI. Solvent Effects	108

VII.	Dynamically Coated Ion Exchangers	111
VIII.	Detection in Paired-Ion Chromatography	113
IX.	Summary and Conclusion	116
<b>Chapter 6 Ligand-Exchange Chromatography</b>		<b>121</b>
I.	Introduction	121
II.	Stability of Metal-Ligand Complexes	122
III.	Elution Orders of Amines	123
IV.	Difficulties in Ligand-Exchange Chromatography	126
V.	Amino Acids and Peptides	127
VI.	Separation of Optical Isomers of Amino Acids	130
VII.	Amino Acids	136
VIII.	Proteins	137
IX.	Oxygen Ligands	138
X.	Sugars as Borate Complexes	143
XI.	Other Oxygen Ligands	143
XII.	Sulfur Ligands	144
XIII.	Thin-Layer Ligand-Exchange Chromatography	144
XIV.	Ligand-Exchange Gas Chromatography	145
XV.	Argentation Chromatography	145
<b>Chapter 7 Amino Acids, Peptides, Proteins, and Carbohydrates</b>		<b>151</b>
I.	Amino Acids	151
II.	Proteins	157
III.	Peptides	164
IV.	Carbohydrates	168
<b>Chapter 8 “Stop and Go” Separations of Metal Ions</b>		<b>173</b>
I.	Introduction	173
II.	Anion Exchange of Metal Chloride Complexes	173
III.	Elements That Form Chloride Complexes	176
IV.	Complexes With Other Anions	177
V.	Cation-Exchange Separations	180
VI.	Use of Nonaqueous Solvents	181
VII.	Anion-Exchange Separations in Aqueous Acetone	183
VIII.	Combined Ion Exchange and Solvent Extraction	186
IX.	Extraction With Tributyl Phosphate	188
X.	Applications of Anion and Cation Exchange to Metal Separations	192
XI.	Conclusion	196

<b>Chapter 9 Collection of Traces</b>	<b>201</b>
I. General Considerations	201
II. Use of Standard Cation- and Anion-Exchange Resins	203
III. Reactive Ion Exchange	204
IV. Iminodiacetate Chelating Resins	204
V. Trace Metals In Sea Water	205
VI. Other Chelating Exchangers	208
VII. Batch Methods	209
VIII. Ion-Exchange Resin Spot Tests	211
<b>Chapter 10 Miscellaneous Analytical Uses of Ion Exchange</b>	<b>215</b>
I. Measurement of Total Electrolyte Concentration	215
II. Conclusion	219
