

CONTENTS

1. Introduction to the theory of chromatographic separations with reference to gas chromatography	1
2. Gas chromatography instrumentation, operation, and experimental considerations	15
3. Development, technology, and utilization of capillary columns for gas chromatography	71
4. Applications of packed and capillary GC	103
5. Chemical derivatization in gas chromatography	133
6. Gas chromatography in analytical toxicology: principles and practice	171
7. Gas chromatography in clinical chemistry	213
8. Chiral separations by gas chromatography	237
9. Environmental analysis using gas chromatography	283
10. The role of gas chromatography in petroleum exploration	331
11. Combined gas chromatography-mass spectrometry	359
