Journal of Chromatography Library	VII
Introduction	1
References	14
Chapter 1. Application of chemical methods to the pre-treatment of samples before chromatographic separation	15
1.1. Introduction	15
1.2. Peculiarities of the elaboration of techniques	30
1.3. The main methods used to obtain derivatives for gas chromatography	45
1.3.1. Silyl derivatives	47
1.3.2. Esters	47
1.3.2.1. The diazomethane method	47
1.3.2.2. The methanol method	47
1.3.2.3. The pyrolysis method	48
1.3.3. Ethers	49
1.3.4. Acyl derivatives	49
1.3.5. Oximes and hydrazones	50
1.3.6. Derivatives of inorganic compounds	50
1.4. Application of the chemical formation of derivatives method	51
1.4.1. Alcohols and phenols	51
1.4.2. Aldehydes and ketones	51
1.4.3. Amines	53
1.4.4. Carboxylic acids	53
1.4.5. Analysis of inorganic acids and metals	54
1.5. Conclusion	55
References	56
Chapter 2. Kinetic methods in gas chromatography	67
References	82
Chapter 3. Pyrolysis—gas chromatography	85
3.1. Introduction	85
3.2. Equipment and experimental procedure	89
3.3. Identification of substances	112
3.4. Determination of the composition of polymer systems and the structure of polymers	121
3.5. Conclusion	131
References	132
Chapter 4. Determination of the carbon skeleton in organic compounds	139
References	154
Chapter 5. Subtraction method	157
5.1. Principle of the method	157
5.2. Application to the identification of the components of test mixtures	164
5.3. Application to impurity analysis	178
5.4. Prospects for development of the method	180
References	181
Chapter 6. Chemically selective stationary phases	185
References	204

Chapter 7. Reaction gas chromatographic methods of elemental analysis	209
7.1. Introduction.	209
7.2. Determination of carbon and hydrogen	213
7.3. Determination of nitrogen	218
7.4. Determination of sulphur	225
7.5. Determination of oxygen	229
7.6. Determination of other elements	232
7.7. Elemental analysis of gas chromatographically separated fractions	233
7.8. Conclusion.	243
References	243
Chapter 8. Reaction methods of trace analysis	249
8.1. Introduction.	249
8.2. Increasing the retention time of the main and trace components or their derivatives.	250
8.3. Decreasing the retention time of the main and trace components or their derivatives	261
8.4. Improvement of detection characteristics	267
8.5. Conclusion.	279
References	280
Chapter 9. Functional group analysis.	287
9.1. Introduction	287
9.2. Specific features of chemico-chromatographic methods of functional group analysis	288
9.3. Preliminary reactions	288
9.4. Reactions after gas chromatographic separation.	292
9.5. Methods of analysis of main functional groups	296
9.5.1. Determination of active hydrogen	296
9.5.2. Determination of amino groups.	297
9.5.3. Determination of main oxygen-containing groups	298
9.5.4. Determination of some sulphur-containing groups	299
9.5.5. Determination of alkoxy groups	300
9.5.6. Determination of sulphur-, nitrogen- and silicon-alkyl groups	301
9.5.7. Determination of vinyl and alkyl groups.	302
9.5.8. Determination of compounds with unsaturated bonds.	302
9.6. Conclusion.	304
References	305
Subject Index	311
