

CONTENTS

1. Overview: Multiple Pathways to Ultrahigh Resolution Chromatography	1
2. Test of the Statistical Model of Component Overlap by Computer-Generated Chromatograms	9
3. Ultrahigh Resolution Gas Chromatography: Constraints, Compromises, and Prospects	27
4. Approaches to Ultrahigh Resolution Chromatography: Interactions Between Relative Peak (N), Relative Retention (α), and Absolute Retention (k')	37
5. Reduction of the Column Diameter in Capillary Gas Chromatography: Some Theoretical Aspects and Practical Consequences	49
6. Use of a Small Volume Thermal Conductivity Detector for Capillary Gas Chromatography: Practical Aspects	59
7. Advances in Liquid Chromatographic Selectivity	77
8. Narrow-Bore, Microparticle-Packed Column High Performance Liquid Chromatography: Utilization and Constraints	91
9. Application of Micro High Performance Liquid Chromatography to the Separation of Complex Mixtures	109
10. High Resolution Supercritical Fluid Chromatography	121
11. Carbon Dioxide Based Supercritical Fluid Chromatography: Column Efficiencies and Mobile Phase Solvent Power	135
12. Super Resolution in Chromatography by Numerical Deconvolution	171
13. The Role of Ultrahigh Resolution Chromatography in the Chemical Industry	199
