

CONTENTS

ABBREVIATIONS xv

SYMBOLS xix

1 AN INTRODUCTION TO INSTRUMENTAL METHODS 1

- 1.1 Terms Associated with Chemical Analysis 1
- 1.2 Classification of Instrumental Techniques 2
- 1.3 A Review of the Important Considerations in Analytical Methods 2
- 1.4 Basic Functions of Instrumentation 7
- 1.5 The Literature of Chemical Instrumentation 9
- 1.6 Important Considerations in Evaluating an Instrumental Method 11
 - Bibliography 12*
 - Literature Cited 12*

2 MEASUREMENTS, SIGNALS, AND DATA 13

- 2.1 Introduction 13
- 2.2 Signal-to-Noise Ratio 13
- 2.3 Sensitivity and Detection Limit 14
- 2.4 Sources of Noise 16
- 2.5 Hardware Techniques for Signal-to-Noise Enhancement 18
- 2.6 Software Techniques for Signal-to-Noise Enhancement 21
- 2.7 Evaluation of Results 28
- 2.8 Accuracy and Instrument Calibration 32
- 2.9 Chemometrics 35
 - Problems 37*
 - Bibliography 38*
 - Literature Cited 39*

3 ELECTRONICS: FUNDAMENTALS AND APPLICATIONS OF SOLID-STATE DEVICES 40

- 3.1 Semiconductor Components 40
- 3.2 Operational Amplifiers 42
- 3.3 Primary Digital Circuits 49
- 3.4 Development of Integrated Circuits 57
 - Problems 58*
 - Bibliography 59*
 - Literature Cited 59*

4

COMPUTER-AIDED ANALYSIS	60
4.1	Introduction 60
4.2	Computer Organization—Hardware 63
4.3	Circuits for Interfacing Computers to Instruments 68
4.4	Computer Organization—Software 81
4.5	Data Representation 86
4.6	The Automated Laboratory 88
	<i>Problems 95</i>
	<i>Bibliography 96</i>
	<i>Literature Cited 96</i>

5

AN INTRODUCTION TO ABSORPTION AND EMISSION SPECTROSCOPY	97
5.1	The Nature of Electromagnetic Radiation 97
5.2	The Electromagnetic Spectrum 100
5.3	Atomic Energy Levels 100
5.4	Molecular Electronic Energy Levels 102
5.5	Vibrational Energy Levels 106
5.6	Raman Effect 108
5.7	Lasers 111
5.8	Nuclear Spin Behavior 113
5.9	Electron Spin Behavior 115
5.10	X-ray Energy Levels 116
	<i>Bibliography 117</i>

6

ULTRAVIOLET AND VISIBLE SPECTROMETRY—INSTRUMENTATION	118
6.1	Radiation Sources 118
6.2	Wavelength Selection 121
6.3	Cells and Sampling Devices 140
6.4	Detectors 141
6.5	Readout Modules 148
6.6	Instruments for Absorption Photometry 148
	<i>Problems 157</i>
	<i>Bibliography 158</i>
	<i>Literature Cited 158</i>

7

ULTRAVIOLET AND VISIBLE ABSORPTION METHODS	159
7.1	Fundamental Laws of Photometry 159
7.2	Spectrophotometric Accuracy 164
7.3	Photometric Precision 166
7.4	Quantitative Methodology 169
7.5	Differential or Expanded-Scale Spectroscopy 173
7.6	Difference Spectroscopy 176
7.7	Derivative Spectroscopy 177

- 7.8 Photometric Titrations 179
- 7.9 Other Techniques 181
- 7.10 Correlation of Electronic Absorption Spectra with Molecular Structure 184
- 7.11 Turbidimetry and Nephelometry 186
 - Problems* 189
 - Bibliography* 195
 - Literature Cited* 195

8

-
- FLUORESCENCE AND PHOSPHORESCENCE SPECTROPHOTOMETRY 197
 - 8.1 Structural Factors 199
 - 8.2 Photoluminescence Power as Related to Concentration 201
 - 8.3 Instrumentation 204
 - 8.4 Fluorescence Lifetime Measurements 214
 - 8.5 Instrumentation for Phosphorescence Measurements 217
 - 8.6 Room Temperature Phosphorescence 219
 - 8.7 Comparison of Luminescence and Ultraviolet-Visible Absorption Methods 219
 - Problems* 220
 - Bibliography* 222
 - Literature Cited* 223

9

-
- FLAME EMISSION AND ATOMIC ABSORPTION SPECTROSCOPY 224
 - 9.1 Introduction 224
 - 9.2 Instrumentation for Flame Spectrometric Methods 227
 - 9.3 Flame Emission Spectrometry 241
 - 9.4 Atomic Absorption Spectrometry 243
 - 9.5 Atomic Fluorescence Spectrometry 249
 - 9.6 Interferences Associated with Flames and Furnaces 250
 - 9.7 Applications 254
 - 9.8 Comparison of FES and AAS 255
 - Problems* 255
 - Bibliography* 259
 - Literature Cited* 259

10

-
- ATOMIC EMISSION SPECTROSCOPY WITH PLASMA AND ELECTRICAL DISCHARGE SOURCES 260
 - 10.1 Introduction 260
 - 10.2 Instrumentation 260
 - 10.3 Typical Applications 281
 - 10.4 ICP Atomic Fluorescence Spectroscopy 282
 - 10.5 Comparison of Methods: ICP versus AAS 282
 - Problems* 284
 - Bibliography* 285
 - Literature Cited* 285

11

INFRARED SPECTROMETRY 287

- 11.1 Correlation of Infrared Spectra with Molecular Structure 288
- 11.2 Instrumentation 293
- 11.3 Sample Handling 305
- 11.4 Quantitative Analysis 314
 - Problems 316*
 - Bibliography 319*
 - Literature Cited 320*

12

RAMAN SPECTROSCOPY 321

- 12.1 Theory 321
- 12.2 Instrumentation 325
- 12.3 Sample Handling and Illumination 328
- 12.4 Structural Analysis 329
- 12.5 Polarization Measurements 332
- 12.6 Quantitative Analysis 335
- 12.7 Comparison of Raman with Infrared Spectroscopy 335
 - Problems 336*
 - Bibliography 338*
 - Literature Cited 339*

13

X-RAY METHODS 340

- 13.1 Production of X Rays and X-ray Spectra 342
- 13.2 Instrumentation 347
- 13.3 Direct X-ray Methods 360
- 13.4 X-ray Absorption Methods 363
- 13.5 X-ray Fluorescence Method 367
- 13.6 X-ray Diffraction 372
- 13.7 Auger Emission Spectroscopy (AES) 381
- 13.8 Electron Spectroscopy for Chemical Analysis (ESCA) 386
 - Problems 392*
 - Bibliography 396*
 - Literature Cited 397*

14

RADIOCHEMICAL METHODS 398

- 14.1 Nuclear Reactions and Radiations 398
- 14.2 Measurement of Radioactivity 402
- 14.3 Neutron Sources 407
- 14.4 Activation Analysis 407
- 14.5 Isotope Dilution Analyses 413
- 14.6 Liquid Scintillation Systems 414
- 14.7 Other Applications of Radionuclides 417
 - Problems 418*
 - Bibliography 421*

15

NUCLEAR MAGNETIC RESONANCE SPECTROSCOPY 422

- 15.1 Basic Principles 422
- 15.2 Continuous-Wave NMR Spectrometers 431
- 15.3 Pulsed Fourier Transform NMR Spectrometer 437
- 15.4 Spectra and Molecular Structure 439
- 15.5 Elucidation of NMR Spectra 447
- 15.6 Quantitative Analysis and Integration 454
- 15.7 NMR Imaging in Medicine 458
- Problems 459*
- Bibliography 463*
- Literature Cited 463*

16

MASS SPECTROMETRY 465

- 16.1 Sample Flow in a Mass Spectrometer 466
- 16.2 Inlet Sample Systems 467
- 16.3 Ionization Methods in Mass Spectrometry 468
- 16.4 Mass Analyzers 476
- 16.5 Ion-Collection Systems 486
- 16.6 Vacuum System 488
- 16.7 Data Handling 489
- 16.8 Isotope-Ratio Spectrometry 489
- 16.9 Correlation of Mass Spectra with Molecular Structure 490
- 16.10 Quantitative Analysis of Mixtures 497
- 16.11 Fourier Transform Mass Spectrometry 499
- 16.12 Tandem Mass Spectrometers 502
- 16.13 Inductively Coupled Plasma–Mass Spectrometry (ICP-MS) 504
- 16.14 Secondary Ion Mass Spectrometry (SIMS) 505
- 16.15 Ion Microprobe Mass Analyzer (IMMA) 506
- Problems 507*
- Bibliography 511*
- Literature Cited 511*

17

CHROMATOGRAPHY: GENERAL PRINCIPLES 513

- 17.1 Classification of Chromatographic Methods 513
- 17.2 Chromatographic Behavior of Solutes 514
- 17.3 Column Efficiency and Resolution 518
- 17.4 Column Processes and Band Broadening 525
- 17.5 Time of Analysis and Resolution 529
- 17.6 Quantitative Determinations 530
- 17.7 Retention Data for Sample Characterization 534
- Problems 537*
- Bibliography 538*
- Literature Cited 539*

18

-
- GAS CHROMATOGRAPHY** 540
- 18.1** Gas Chromatographs 540
 - 18.2** Derivative Formation 544
 - 18.3** Gas Chromatographic Columns 545
 - 18.4** Liquid Phases and Column Selection 548
 - 18.5** Detectors for Gas Chromatography 552
 - 18.6** Optimization of Experimental Conditions 560
 - 18.7** Gas-Solid Chromatography 566
 - 18.8** Interfacing Gas Chromatography with Mass Spectrometry 569
 - 18.9** Interfacing Gas Chromatography with Infrared Spectrometry 572
 - Problems* 574
 - Bibliography* 578
 - Literature Cited* 578

19

-
- HIGH-PERFORMANCE LIQUID CHROMATOGRAPHY: THEORY AND INSTRUMENTATION** 580
- 19.1** Optimization of Column Performance 580
 - 19.2** Gradient Elution and Related Procedures 587
 - 19.3** Derivatization 589
 - 19.4** HPLC Instrumentation 592
 - 19.5** Mobile-Phase Delivery System 593
 - 19.6** Sample Introduction 596
 - 19.7** Separation Columns 597
 - 19.8** Detectors 600
 - 19.9** Interfacing HPLC with Mass Spectrometry 608
 - Problems* 610
 - Bibliography* 613
 - Literature Cited* 613

20

-
- HIGH-PERFORMANCE LIQUID CHROMATOGRAPHY: METHODS AND APPLICATIONS** 614
- 20.1** Introduction 614
 - 20.2** Structural Types of Column Packings 616
 - 20.3** Adsorption Chromatography 617
 - 20.4** Bonded-Phase Chromatography 622
 - 20.5** Reverse-Phase Chromatography 626
 - 20.6** Ion-Pair Chromatography 629
 - 20.7** Ion-Exchange Chromatography 633
 - 20.8** Ion Chromatography 641
 - 20.9** Exclusion Chromatography 644
 - 20.10** Affinity Chromatography 650
 - Problems* 652
 - Bibliography* 654
 - Literature Cited* 654

21

INTRODUCTION TO ELECTROANALYTICAL METHODS OF ANALYSIS 656

- 21.1 Electrochemical Cells 657
 - 21.2 Current-Potential Relationships 659
 - 21.3 Mass Transfer by Migration and Convection 662
 - 21.4 Mass Transfer by Diffusion 663
 - 21.5 Classification of Indicator Electrodes 668
 - Bibliography* 669
 - Literature Cited* 670
-

22

POTENTIOMETRY 671

- 22.1 Electrochemical Cells 671
 - 22.2 Reference Electrodes 671
 - 22.3 The Measurement of pH 674
 - 22.4 Ion-Selective Electrodes 682
 - 22.5 Ion-Activity Evaluation Methods 688
 - 22.6 Interferences 689
 - 22.7 Potentiometric Titrations 691
 - Problems* 694
 - Bibliography* 695
 - Literature Cited* 696
-

23

VOLTAMMETRIC TECHNIQUES 697

- 23.1 Instrumentation 698
 - 23.2 Charging or Capacitive Current 702
 - 23.3 Linear Potential Sweep (dc) Voltammetry 704
 - 23.4 Potential Step Methods 709
 - 23.5 Cyclic Potential Sweep Voltammetry 713
 - 23.6 Phase-Sensitive Alternating Current Voltammetry 715
 - 23.7 Hydrodynamic Methods 717
 - 23.8 Stripping Voltammetry 718
 - 23.9 Voltammetric Methods Compared 721
 - 23.10 Voltammetric Applications 723
 - Problems* 728
 - Bibliography* 730
 - Literature Cited* 730
-

24

ELECTROSEPARATIONS, COULOMETRY, AND CONDUCTANCE METHODS 732

- 24.1 Electroseparations with Controlled-Electrode Potential 732
- 24.2 Controlled-Potential Coulometry 737
- 24.3 Constant-Current Coulometry 741
- 24.4 Conductance Methods 747
 - Problems* 756
 - Bibliography* 759
 - Literature Cited* 760

25

THERMAL ANALYSIS	761
25.1	Differential Scanning Calorimetry and Differential Analysis 762
25.2	Thermogravimetry 767
25.3	Evolved Gas Detection and Analysis 768
25.4	Methodology of Thermogravimetry, Differential Scanning Calorimetry, and Differential Thermal Analysis 769
25.5	Thermomechanical Analysis 774
25.6	Dynamic Mechanical Analysis 776
25.7	Thermometric Titrimetry and Direct-Injection Enthalpimetry 777
	<i>Problems</i> 780
	<i>Bibliography</i> 784
	<i>Literature Cited</i> 784

26

PROCESS INSTRUMENTS AND AUTOMATED ANALYSIS	786
26.1	Introduction 786
26.2	Industrial Process Analyzers 789
26.3	Methods Based on Bulk Properties 791
26.4	Infrared Process Analyzers 795
26.5	Oxygen Analyzers 800
26.6	On-Line Potentiometric Analyzers 803
26.7	Chemical Sensors 804
26.8	Process Gas Chromatography 806
26.9	Continuous On-Line Process Control 809
26.10	Automatic Chemical Analyzers 811
26.11	Automatic Elemental Analyzers 821
26.12	Laboratory Robots 824
	<i>Problems</i> 826
	<i>Bibliography</i> 828
	<i>Literature Cited</i> 828

ANSWERS TO PROBLEMS 829

APPENDIXES 860

A.	Common Techniques of Analytical Chemistry 860
B.	Sources of Laboratory Experiments 866
C.	Potentials of Selected Half-Reactions at 25 °C 867
D.	Selected Half-Wave Potentials for Inorganic Substances 869
E.	Proton-Transfer Reactions of Materials in Water at 25 °C 872
F.	Cumulative Formation Constants for Metal Complexes at 25 °C 874
G.	A Comparison of Trace Element Detection Limits for Atomic Spectroscopic Methods 876

INDEX 878
