

## CONTENTS

<b>Section I. Analytical Methods for the Determination of Nitrogen and Amino Acids in Foods</b>	<b>1</b>
A. Protein and Other Nitrogen Components of Foodstuffs	1
B. Analyses of Individual Amino Acids in Foods	3
C. Estimation of “Available” Amino Acids in Foods	5
<b>Section II. Evaluation of Protein Quality of Foods from Their Amino Acid Content</b>	<b>13</b>
A. Reference Amino Acid Patterns	13
B. Effects of Excessive Intakes of Amino Acids	19
C. Conclusion	22
<b>Section III. Biological Assay Methods for Protein Evaluation</b>	<b>23</b>
A. General Objectives of Animal Assays	23
B. Expression of Protein Values of Diets in Terms of Net Dietary Protein Calories per cent (NDp Cal %)	28
C. Other Animal Assays of Protein Value	30
D. Microbiological Methods	31
<b>Section IV. Clinical Methods for Protein Evaluation</b>	<b>39</b>
A. Infant Growth	39
B. Nitrogen Balance	40
<b>Section V. Serum Amino Acids and Urinary Sulfur/Nitrogen Ratios in the Evaluation of Protein Quality</b>	<b>45</b>
A. Serum Amino Acids	45
B. Urinary S/N, N/creatinine and S/creatinine Ratios	47
<b>Section VI. Relationship of Stress and Physiological State to the Biological Evaluation of Protein Quality</b>	<b>49</b>
A. Pituitary-Adrenal Axis and Protein Metabolism	49
B. Individual Stressors on Protein Metabolism	51
C. Effect of Physiological State	53
<b>Section VII. Summary and Recommendations</b>	<b>55</b>
<b>Section VIII. Glossary of Terms Used in Protein Quality Evaluation</b>	<b>61</b>
