QUALITY TESTS

Introduction—Parameters of Quality and Acceptance 1/ Function of Standard Methods 1/ Standard Procedures 2/ Adopting New Procedures 3/ Collaborative Studies on Methods 3/ Uniformity of Procedures 4/ Split-Sample Tests 5/ Integration of Farm and Plant Inspection with Laboratory Control 6/ Relative Accuracy of Methods for Measuring Sanitary Quality 6/ Consideration of Specific Methods 7/ Quality Control in the Laboratory 8/ References 9

2. SIGNIFICANT PATHOGENS IN DAIRY PRODUCTS 11

Introduction 11/ Bacterial Infections and Intoxications 13/ Mycotoxins 22/ Viral, Rickettsial and Other Diseases 23/ Protozoan Infections 26/ References 27

3. SAMPLING DAIRY AND RELATED PRODUCTS 33

Fluid Milk and Cream Samples 33/ Other Dairy Products 42/ Sampling for Specific Laboratory Procedures 48/ References 53

4. CULTURE MEDIA AND PREPARATION 55

Introduction 55/ Basic Steps in Medium Preparation 56/ Adjustment of Reaction (pH) 58/ Sterilization and Storage 58/ Quality Control 60/Suitability of Water for Microbiological Applications 61/ Preparation of Phosphate-buffered Dilution Water and Testing for Toxicity 62/Cleaning Glassware and Testing for Detergent Residues 64/ Formulas of Culture Media and Directions to Prepare Media for Use 65/ Physical Standards for Standard Methods Agar 68/ Productivity Tests for Standard Methods Agar Medium 69/ References 74

5. STANDARD PLATE COUNT METHOD 77
- Introduction 77/ Equipment and Supplies 78/ Materials 82/ Sterilization 83/ Examination of Samples 83/ Preparing Samples 84/ Diluting Samples 85/ Plating 87/ Sterility Controls of Medium, Dilutions and Equipment 87/ Incubation 88/ Counting Colonies on Plates and Recording Results 88/ Computing and Recording Counts 92/ Reporting and Interpreting Counts 93/ Personal Errors 93/ References 93
6. COLIFORM BACTERIA 95
- Introduction 95/ Definitions 96/ General Interpretations 96/ Sampling 97/ Equipment, Supplies and Media 97/ General Procedure 97/ Relative Value of Plate and Tube Methods 98/ Coliform Test with a Solid Medium 99/ Coliform Test with a Liquid Medium 99/ Confirmed Test from a Solid Medium 99/ Completed Test from a Liquid Medium 100/ Reporting Results 100/ Table of MPN Coliforms 102/ References 104
7. THERMODURIC, THERMOPHILIC, AND PSYCHROTROPHIC BACTERIA 107
- Thermoduric Bacteria 107/ Thermophilic Bacteria 109/ Psychrotrophic Bacteria 110/ References 112
8. SCREENING AND CONFIRMATORY METHODS FOR THE DETECTION OF ABNORMAL MILK 115
- Introduction 115/ Sampling 115/ Screening Tests 115/ Confirmatory Tests 125/ References 139
9. DETECTION OF ANTIBIOTIC RESIDUES IN MILK AND DAIRY PRODUCTS 141
- Introduction 141/ *Bacillus subtilis* Disc Assay 142/ Modified *Sarcina lutea* Cylinder Plate Method for Detection of Penicillin in Non-fat Dry Milk 145/ Specific Antimicrobial Cylinder Methods 149/ References 149
10. MICROBIOLOGICAL METHODS FOR CONCENTRATED AND DRY MILK PRODUCTS 151
- Evaporated Milk 151/ Concentrated and Sweetened Condensed Milks 152/ Dry Dairy Products 153/ References 156

MICROBIOLOGICAL METHODS FOR BUTTER, MARGARINE AND RELATED PRODUCTS	157
Introduction 157/ Microbiological Methods 157/ Sampling Procedure 158/ Bacterial Counts 158/ Yeast and Mold Counts 159/ References 159	
12 MICROBIOLOGICAL METHODS FOR CHEESE AND OTHER CULTURED PRODUCTS	161
Introduction 161/ Collection and Preparation of Samples 162/ Microbiological Analyses 163/ References 164	
13 MICROBIOLOGICAL METHODS FOR ICE CREAM AND RELATED FOOD PRODUCTS	165
Introduction 165/ Equipment and Supplies 166/ Sampling Procedures 166/ Preparation of Samples for Plating 166/ Standard Plate Count 167/ Test for Coliforms 168/ Psychrotrophic Count 168/ Yeast and Mold Count 168/ References 168	
4. DIRECT MICROSCOPIC METHOD FOR BACTERIA	169
Introduction 169/ Applications to Raw Milk to be Pasteurized 169/ Applications to Pasteurized Milk 169/ Applications to Dry Milk 170/ Sources of Error in Method 170/ Bacterial Estimates 170/ Interpreting and Reporting Bacterial Counts or Grades 171/ Procedure for Collecting Samples 172/ Equipment and Supplies 172/ Materials 178/ Illumination Adjustment 178/ Adjustment and Calibration of Microscope 180/ Calculation of Microscopic Factor 181/ Derivation of Working Factor 181/ Using Transfer Instruments and Preparing Films 182/ Handling of Slides during Staining 183/ Preparation and Use of Stain 183/ Examining Films 184/ Standards 185/ References 185	
15. REDUCTION METHODS	187
Methylene Blue Reduction Method 187/ Resazurin Reduction Method 191/ References 194	
16. MICROBIOLOGICAL TESTS FOR EQUIPMENT, CONTAINERS, WATER AND AIR	197
Introduction 197/ Sample Collection 197/ Tests for Sanitation of Equipment 197/ Standard Tests for Water Supplies 203/ Tests for Microbiological Quality of Air 204/ References 204	

17.	SEDIMENT IN MILK	207
	Introduction 207/ General Methods 208/ Equipment and Supplies 208/ Preparation and Use of Standard Sediment Discs 210/ Procedure 210/ References 211	
18.	PHOSPHATASE METHODS	213
	Introduction 213/ General Precautions 214/ Controls Applicable to All Phosphatase Procedures 215/ Scharer Rapid Phosphatase Test 217/ Modified Spectrophotometric Phosphatase Method 220/ Cornell Phosphatase Test 222/ Rutgers Phosphatase Test 225/ Phosphatase Reactivation in Dairy Products Heated by High-heat Short-time and Ultra-pasteurization Methods and Ultra High-temperature Methods 226/ References 228	
19.	CHEMICAL METHODS	231
	Introduction 231/ Added Water in Milk 231/ Available Chlorine: Thiosulfate Titration 235/ Fat 236/ Moisture and Solids 252/ Organochlorine Pesticide Residues in Milk (Examination for Multiple Residues) 261/ Protein 269/ Fat, Protein, Lactose: Infrared Spectrophotometry 277/ References 281	
20.	RADIONUCLIDES IN MILK	283
	Introduction 283/ Sampling 284/ Milk Preservation 284/ Determination of ⁸⁹ Sr and ⁹⁰ Sr in Milk by Ion Exchange 284/ Determination of ⁸⁹ Sr and ⁹⁰ Sr in Milk by TCA 295/ Determination of ¹³¹ I, ¹⁴⁰ Ba and ¹³⁷ Cs in Milk by Gamma Ray Spectrometry 304/ References 309	
21	ALTERNATE VIABLE COUNT METHODS	311
	Introduction 311/ Collection and Storage of Samples Before Testing 311/ Statistical Protocol for an Analyst 311/ Oval Tube Method 312/ Plate Loop Method 315/ Spiral Plate Count Method 317/ References 324	

Appendixes

A. SUPPLEMENTAL MICROBIOLOGICAL CONTROL METHODS

Aureomycin-Rose Bengal Agar Method to Detect Molds and Yeasts 327/ Citrate-Azide Agar Method for Enterococci in Butter 328/ Cylinder Count Method to Determine Plate Count of Pasteurized Milk Products 329/ Detection of Sulfa Drugs and Antibiotics in Milk 330/ Detection of Penicillin in Milk by a Disc Assay Technique—International Standard Fil-IDF 57:1970 331/ Modified IDF Disc Test for Penicillin in Milk 335/ Delvotest P 338/ BR Foss Test 341/ Disintegration Method to Determine the Microbial Content of Paper Container Materials 344/ Moseley Keeping-Quality Test 347/ Preliminary Incubation (PI) for Raw Milk 347/ Screening Method (Nutrient Broth Modification) for Retail Milk Containers 349/ Screening Tests for Microbiological Quality of Air 349/ Swabbing Methods: Calcium Alginate, Dacron (Polyester) and Rayon Swabs 351/ Testing of Sterilized or Microbiologically Stable Milk Products 352/ Automated Plate Loop Count Procedure 353/ Detection and Enumeration of Lactic Culture Bacteriophage 353/

B. SUPPLEMENTAL CHEMICAL CONTROL METHODS

Acidity: Titratable 355/ Acidity: Potentiometric, pH 358/ Alkalinity of Ash in Dry Buttermilk, Nonfat and Whole Dried Milk 361/ Chlorides 363/ Extraneous Matter 367/ Fat: Modified Methods 369/ Fat: Gerber 375/ Fat, Moisture and Salt in Butter and Margarine (Modified Kohman Method) 376/ Hydrolytic Rancidity 379/ Lactose in Cheese 381/ Moisture and Solids 385/ Somatic Cell Count 388/ Ash 390/
