

CONTENTS

PART I.-Geological Considerations and Suitability of Water for Public Supply Purposes

I.	Reasons for which Waters and their Sources are Examined	1
II.	Geology in its Relation to Sources of Supply	4
III.	The Character of Water from Different Geological Sources	21
IV.	The Suitability of Waters for Public Supply Purposes	26

PART II.-Inspection of Waterworks and Sources of Supply

V.	Examination of the Sources of Surface Water Supplies	45
VI.	Examination of Rivers and Streams	52
VII.	Examination of Springs and Wells. Underground Waters	62
VIII.	Examination of Waterworks, Reservoirs, Filters and Purifying Plants, Mains, etc	84

PART III.-The Scope of Biological, Physical and Chemical Examinations

IX.	The Scope of Microscopical and Biological Examinations	105
X.	The Scope of Physical and Chemical Examination of Water	131

PART IV.-Analytical Processes and Methods of Examination

XI.	Collection of Samples of Water	157
XII.	Analyses of Water for Sanitary and other Purposes	171
XIII.	Physical Examination	177
XIV.	Estimation and Examination of Suspended Matter	192
XV.	Chemical Analysis	198
XVI.	The Gases Dissolved in Water	242
XVII.	Special Chemical Examinations	250
XVIII.	Examination of Grossly Polluted Waters, Sewage and Sewage Effluents	259
XIX.	Radioactivity in Water	276
XX.	Suitability of Water for Trade Purposes. Boiler Feed and Boiler Waters	294

PART V.-Analytical Characters of Waters in Relation to their Geological Origin

XXI.	The Characters of Waters as shown by Analysis	303
XXII.	Tables of Analyses of Water from Various Geological Sources	314

PART VI.-The Bacteriological Examination of Water

XXIII.	The Value and Significance of the Bacteriological Examination	384
XXIV.	The Enumeration of Bacteria in Water	394
XXV.	The Intestinal Organisms Used as Indices of Pollution. The Coli-aerogenes Group of Bacteria	406
XXVI.	Organisms Resembling the Coli-aerogenes Group of Bacteria	459
XXVII.	Intestinal Organisms Used as Indices of Pollution-Faecal Streptococci	466
XXVIII.	Intestinal Organisms Used as Indices of Pollution-The Sporeforming Anaerobes. Clostridium	472
XXIX.	Spirochaetes in Water-Leptospirae	481
XXX.	Pathogenic Organisms in Water. Cholera Vibrios, Typhoid and Paratyphoid Bacteria, Food Poisoning Bacteria and Dysentery Bacteria. The Bacteriological Examination of Polluted Water, Sewage and Effluents for Pathogenic Bacteria	485
XXXI.	Miscellaneous Bacteriological Methods	516

PART VII.-Results and Standards in the Examination of Samples of Water

XXXII.	The Results Obtained in the Examination of English water Supplies. English Practice and English Standards	523
XXXIII.	American Practice and American Standards	542

PART VIII.-Water Supplies and Disease

XXXIV.	Water-borne Diseases and the Examination of Waterworks Employees. Danger to Foodstuffs in Contact with Polluted Water	547
--------	---	-----

PART IX.-The Purification and Treatment of Water

XXXV.	The Purification of Water by Storage, Sedimentation and Coagulation	597
XXXVI.	The Purification of Water by Sand Filtration. Micro-straining	609
XXXVII.	The Bacterial Purification of Water by Physical Agents, Ozone, Metals and Filtration	619
XXXVIII.	The Bacterial Purification of Water by Chlorination	633
XXXIX.	The Purification of Water by means of Lime	664
XL.	Softening of Water	673
XLI.	Iron and Manganese in water	699
XLII.	Corrosion and Plumbo-solvency	708
XLIII.	Fungal and Algal Growths in Water. Prevention and Removal	728
XLIV.	Colour, Odour and Taste in Water. Prevention and Removal	737
XLV.	Purification of Water for Swimming Bath Purposes	747
	Appendix commencing with Table of Contents	764
	Index to Analyses	813
	Index	819
