

# Contents

<b>Chapter 1 Chelation and its Role in Contemporary Liquid Chromatography</b>	<b>1</b>
1.1 Basic Chromatographic Principles	1
1.2 Chelation as a Mechanism for Obtaining Separation Selectivity	3
1.3 Terminology and Definitions	4
1.4 Historical Developments	6
1.5 The Evolution of Chelating Stationary Phases	9
1.6 The Current State of HPCIC and Context	11
References	13
<b>Chapter 2 Retention Mechanism and Chelation Theory</b>	<b>16</b>
2.1 Introduction	16
2.2 Surface and Solution Complexation	16
2.2.1 Complexation Kinetics	17
2.3 Equilibria Within the Chelating Ion Exchanger	21
2.3.1 Distribution Ratio Within a Mixed Mode Mechanism	23
2.3.2 Selectivity in Non-complexing Mobile Phases	24
2.3.3 Secondary Equilibria Within the Mobile Phase	26
2.4 Temperature Effects in HPCIC	27
2.4.1 Thermodynamic Effects	27
2.4.2 Kinetic Effects	28
2.5 Mobile Phase pH	29
2.6 Organic Solvent Additives	31
References	32

<b>Chapter 3 Chelating Stationary Phases</b>	<b>35</b>
3.1 Introduction	35
3.2 Types and Properties of Chelating Ion Exchange Ligands	36
3.2.1 Adsorption of Metal Ions	37
3.2.2 Ligand Chemical Stability	37
3.2.3 Suitable Coordinating Sites	37
3.2.4 Functional Selectivity	37
3.2.5 Suitable Acid–Base Properties and Surface Charge	39
3.3 Chelating Ion Exchangers with Covalently Bonded Chelating Groups	42
3.3.1 Types of Chelating Ion Exchangers and Synthetic Methods	42
3.3.2 Polymer Based Chelating Ion Exchangers	46
3.3.3 Silica Based Chelating Ion Exchangers	54
3.3.4 Commercially Available Chelating Ion Exchange Phases	64
3.4 Stationary Phase Matrix Effects	67
3.4.1 Surface Distribution of Covalently Bound Ligands	70
3.4.2 Effects of Phase and Particle Porosity	73
3.4.3 Effect of Stationary Phase Structure upon Separation Selectivity	74
3.4.4 Monolithic Chelating Ion Exchangers	77
3.5 Dynamically Modified and Impregnated Stationary Phases	79
3.5.1 Impregnated (Pre-coated) Phases Using Metallochromic Ligands	80
3.5.2 Dynamically Modified Phases	95
References	108
<b>Chapter 4 Elution</b>	<b>116</b>
4.1 Mobile Phase Parameters Influencing Separation Performance in HPCIC	116
4.1.1 Ionic Strength	116
4.1.2 Temperature Effects	124
4.1.3 pH of the Mobile Phase	130
4.1.4 Organic Solvents in HPCIC	132
4.1.5 Addition of Oxidising and Reducing Agents	134
4.2 Elution Modes	135
4.2.1 Isocratic Elution	135
4.2.2 Gradient Elution	147
References	154

<b>Chapter 5</b>	<b>Liquid–Liquid Chromatographic Methods</b>	<b>158</b>
5.1	High Speed Counter-current Chromatography of Metal Ions	158
5.1.1	Extracting Ligands and Metal Ion Selectivity	161
5.1.2	Efficiency of Metal Separations using HSCCC	167
5.1.3	Applications	169
5.2	High-performance Extraction Chromatography	170
5.2.1	Stationary Phase Supports	175
5.2.2	Ligand Loading Stability and Retention Mechanism	177
5.2.3	Type of Extracting Reagent	178
5.2.4	Applications	180
	References	191
<b>Chapter 6</b>	<b>Detection</b>	<b>194</b>
6.1	Background	194
6.2	Post-column Reactions for the Photometric Detection of Metal Ions	195
6.2.1	Construction of Post-column Reactors	196
6.2.2	Reagents for Post-column Derivatisation	203
6.2.3	Recent Developments in High-sensitivity Reagents for Post-column Reactions	219
6.3	Practical Methods for Improving Limits of Detection in Liquid Chromatography	222
6.3.1	The Detection Limit	222
6.3.2	Types of Baseline Noise	224
6.3.3	Noise Reduction Methods	226
6.4	Other Types of Post-column Reaction Detection	230
6.4.1	Displacement Reactions	230
6.4.2	Fluorescence Detection	232
6.4.3	Chemiluminescence Post-column Reaction Detection	233
6.5	Hyphenated Techniques	234
	References	236
<b>Chapter 7</b>	<b>Practical Applications</b>	<b>242</b>
7.1	Potential HPCIC Applications	242
7.2	Relative Advantages of HPCIC	243
7.3	Fresh and Potable Waters	250
7.4	Saline Samples	254
7.4.1	Seawater and Estuarine Water	255
7.4.2	Highly Saline Waters	261
7.4.3	Commercial Products and Fine Chemicals	262

7.5	Solid Samples	269
7.5.1	Sediments, Soils and Minerals	270
7.5.2	Biological Materials and Foodstuffs	277
7.5.3	Miscellaneous	280
	References	282
