

TABLE OF CONTENTS

AUTHOR	iv
ACKNOWLEDGEMENT	vii
PREFACE	viii
1 Introduction	1
1.1 Critical evaluation of current best practice in analytical method development and validation	8
2 Materials and Methods	12
2.1 Chromatographic system suitability parameter	15
3 Validation of a Reversed-phase HPLC Method for 1,10-Phenanthroline-5,6-Dione and Analysis of its Impurities by HPLC-MS	18
3.1 Step-by-step new method development by HPLC	20
3.2 Identification of impurities by LC-MS	23
3.3 Step-by-step method validation	26
3.4 Conclusion	29
4 Development and Validation of a HPLC Method for 4,7-Phenanthroline-5,6-Dione and Identification of Its Major Impurity by HPLC-MS/APCI	30
4.1 Related substances	32
4.2 Assay and purity calculations	32
4.3 Separation of 4,7-phenanthroline-5,6-dione and its impurity	33
4.4 Identification of impurities by LC-MS	35
4.5 Step-by-step method validation	38
4.6 Conclusion	39

5	Determination of 2-(Diethylamino)-<i>N</i>-(2,6-Diethylphenyl) Acetamide in a Gel Pharmaceutical Formulation by HPLC	40
5.1	Step-by-step new method development	40
5.2	Step-by-step method validation	42
5.3	Conclusion	45
6	Determination of Combined <i>p</i>-Hydroxy Benzoic Acid Preservatives in a Liquid Pharmaceutical Formulation by HPLC	47
6.1	Step-by-step new method development	48
6.2	Step-by-step method validation	50
6.3	Conclusion	53
7	Method Development and Validation for the GC–FID Assay of <i>p</i>-Cymene in Tea Tree Oil Formulation	54
7.1	Step-by-step new method development	55
7.2	Step-by-step method validation	58
7.3	Stability study	60
7.4	Conclusion	61
8	Overall Conclusion and Suggestions for Further Work	63
	References	68
