## Contents

### CHAPTER 1

#### *The Theory of Antibiotic Inhibition Zones*

K. E. COOPER

I. Introduction. The Principles Involved . . . . .	1
II. The Laws of Diffusion . . . . .	4
III. The Laws of Growth and Multiplication . . . . .	38
IV. The Laws of Absorption and Partition . . . . .	56
V. Mechanisms of Antibiotic Action . . . . .	66
VI. Some Biological Considerations Affecting the Use of Statistical Methods . . . . .	71
VII. Other Uses of Diffusion Methods . . . . .	78
VIII. Sensitivity Tests . . . . .	81
IX. Summary of Antibiotic Zone Formation . . . . .	83

### CHAPTER 2

#### *Microbiological Assay Using Large Plate Methods*

J. S. SIMPSON

I. Introduction . . . . .	88
II. Requirements for Accurate Assay . . . . .	90
III. Assay Designs . . . . .	94
IV. Microbiological Assay of Penicillin . . . . .	101
V. Microbiological Assay of Riboflavin . . . . .	111
VI. Interpretation of Results . . . . .	117
VII. Sources of Errors . . . . .	118
VIII. Validity of Assay . . . . .	121

## CHAPTER 3

*Dilution Methods of Antibiotic Assays*

FREDERICK KAVANAGH

I. Streak-Plate Method . . . . .	125
II. Serial Dilution Assay . . . . .	126
III. Antiluminescent Assay . . . . .	138

## CHAPTER 4

*Elements of Photometric Assaying*

FREDERICK KAVANAGH

I. Introduction. . . . .	142
II. Physical Factors Influencing Turbidity . . . . .	143
III. Calibration of Photometers . . . . .	149
IV. Inoculum . . . . .	159
V. Media . . . . .	166
VI. Incubation . . . . .	169
VII. Response of Bacteria . . . . .	174
VIII. Modes of Expressing Response . . . . .	180
IX. Design and Validity . . . . .	194
X. Sensitivity . . . . .	203
XI. Meaning of a Photometric. Response . . . . .	204
XII. Variations and Errors . . . . .	206

## CHAPTER 5

*Automation of Microbiological Assays*

THOMAS A. HANEY, JOHN R. GERKE, AND JOSEPH F. PAGANO

I. Introduction. . . . .	219
II. Mechanization of Manual Methods . . . . .	220
III. Continuous Flow Methods . . . . .	226
IV. Computations . . . . .	245

## CHAPTER 6

*Antibiotic Substances**Part I Antibacterial Assays*

## 6.1 Introduction

FREDERICK KAVANAGH

I. Plan of the Chapter . . . . .	249
II. Sources of Standard Preparations . . . . .	250

III. Interferences . . . . .	252
IV. Solubilities . . . . .	255
<b>6.2 Bacitracin</b>	
<b>L. J. DENNIN</b>	
I. Introduction . . . . .	261
II. Test Organisms . . . . .	262
III. Standard Solutions . . . . .	262
IV. Sample Preparation . . . . .	262
V. Mechanics of the Assay . . . . .	262
VI. Measuring the Response . . . . .	264
VII. Computation of Answers . . . . .	264
<b>6.3 Cephalosporin C</b>	
<b>FREDERICK KAVANAGH</b>	
I. Introduction . . . . .	265
II. Plate Assay . . . . .	266
III. Large Plate Assay . . . . .	268
<b>6.4 Chloramphenicol</b>	
<b>ROBERT HANS, MARGARET GALBRAITH, AND WILLIAM C. ALEGNANI</b>	
I. Introduction . . . . .	271
II. Cylinder Plate Assay Method . . . . .	272
III. Turbidimetric Assay Method . . . . .	278
<b>6.5 Dihydrostreptomycin</b>	
<b>FREDERICK KAVANAGH AND L. J. DENNIN</b>	
I. Introduction . . . . .	283
II. Turbidimetric Assay . . . . .	284
III. Plate Assay for Dihydrostreptomycin and Streptomycin . . . . .	285
<b>6.6 Erythromycin ✓</b>	
<b>FREDERICK KAVANAGH AND L. J. DENNIN</b>	
I. Introduction . . . . .	289
II. Turbidimetric Method . . . . .	290
III. Plate Assay . . . . .	292
<b>6.7 Fumagillin</b>	
<b>ROLAND L. GIROLAMI</b>	
I. Introduction . . . . .	295
II. Plate Method . . . . .	296
III. Spectrophotometric Method . . . . .	300
IV. Other Methods . . . . .	300

**6.8 Hygromycin B****L. J. DENNIN**

I. Introduction . . . . .	303
II. Test Organism . . . . .	303
III. Standard Solutions . . . . .	304
IV. Sample Preparation . . . . .	304
V. Mechanics of the Assay . . . . .	306
VI. Measuring the Response . . . . .	307
VII. Computation of Answers . . . . .	307

**6.9 Neomycin****L. J. DENNIN**

I. Introduction . . . . .	309
II. Test Organisms . . . . .	310
III. Standard Solutions . . . . .	310
IV. Sample Preparation . . . . .	310
V. Mechanics of the Assay . . . . .	310
VI. Measuring the Response . . . . .	312
VII. Computation of Answers . . . . .	312

**6.10 Penicillins** ✓**FREDERICK KAVANAGH AND L. J. DENNIN**

I. Introduction . . . . .	314
II. Photometric Assay . . . . .	316
III. Petri Plate Assay . . . . .	327
IV. Large Plate Assay . . . . .	340
V. Hydroxamic Acid Method . . . . .	340

**6.11 Penicillin V****FREDERICK KAVANAGH**

I. Photometric Method . . . . .	347
II. Plate Method . . . . .	347

**6.12 Polymyxin****L. J. DENNIN**

I. Introduction . . . . .	349
II. Test Organism . . . . .	350
III. Standard Solutions . . . . .	350
IV. Sample Preparation . . . . .	350
V. Mechanics of the Assay . . . . .	350
VI. Measuring the Response . . . . .	352
VII. Computation of Answers . . . . .	352

**6.13 Ristocetin****ROLAND L. GIROLAMI**

I. Introduction . . . . .	353
II. Turbidimetric Method . . . . .	354

III. Blood Assay Method . . . . .	356
IV. Plate Method . . . . .	357
V. Salt Plate Method . . . . .	360

### 6.14 Streptomycin

FREDERICK KAVANAGH

I. Introduction . . . . .	361
II. Turbidimetric Assay . . . . .	361
III. Plate Assay . . . . .	361

### 6.15 Tetracyclines /

FREDERICK KAVANAGH

Text . . . . .	363
----------------	-----

### 6.16 Thiostrepton

JOSEPH D. LEVIN AND JOSEPH F. PAGANO

I. Introduction . . . . .	365
II. Test Organism . . . . .	366
III. Preparation of Standards and Samples for Assay . . . . .	367
IV. Assay Design . . . . .	367
V. Thiostrepton in Milk . . . . .	367

### 6.17 Tylosin

FREDERICK KAVANAGH AND L. J. DENNIN

I. Introduction . . . . .	369
II. Photometric Assay . . . . .	370
III. Plate Assay . . . . .	371

### 6.18 Vancomycin

FREDERICK KAVANAGH

I. Introduction . . . . .	375
II. Turbidimetric Method . . . . .	376
III. <i>Bacillus subtilis</i> Plate Assay . . . . .	377
IV. <i>Staphylococcus aureus</i> Plate Assay . . . . .	379

### 6.19 Media and Buffers

FREDERICK KAVANAGH

Text . . . . .	381
----------------	-----

## Part II Antifungal Assays

JOHN R. GERKE, JOSEPH D. LEVIN, AND JOSEPH F. PAGANO

I. Introduction . . . . .	387
II. Turbidimetric Methods . . . . .	391

III. Agar Dilution Assay Method . . . . .	397
IV. Diffusion in Agar . . . . .	399
V. Respirometric Method of Assay . . . . .	406

## CHAPTER 7

### *Vitamins*

#### **7.1 Introduction**

FREDERICK KAVANAGH

Text . . . . .	411
----------------	-----

#### **7.2 pH as Assay Response**

FREDERICK KAVANAGH

Text . . . . .	415
----------------	-----

#### **7.3 Specificity**

FREDERICK KAVANAGH

Text . . . . .	417
----------------	-----

#### **7.4 Biotin**

HELEN R. SKEGGS

I. Text Organism . . . . .	422
II. Standard Solution . . . . .	422
III. Stability of Compound . . . . .	422
IV. Preparations of Samples for Assay . . . . .	423
V. Preservation of the Test Organism . . . . .	423
VI. Preparation of Inoculum . . . . .	424
VII. Medium . . . . .	424
VIII. Design of the Assay . . . . .	425
IX. Assay Conditions . . . . .	426
X. Reading the Assay . . . . .	426
XI. Computation of Answers . . . . .	428
XII. Other Assay Methods for Biotin . . . . .	428

#### **7.5 The Folic Acid Group**

E. EIGEN AND G. D. SHOCKMAN

I. Introduction. . . . .	432
II. Preparation of Samples for Assay . . . . .	446
III. Microbiological Assay Methods . . . . .	453
IV. Agar Diffusion Methods . . . . .	478
V. Chemical Methods for Folic Acid . . . . .	484
VI. Critical Evaluation of the Microbiological Assay of Folic Acid and Related Compounds . . . . .	485

*7.6 Agar Plate Assays for Pantothenic Acid, Inositol, and Pyridoxine*

L. J. DENNIN

I. Introduction . . . . .	489
II. Test Organism . . . . .	491
III. Standard Solutions . . . . .	491
IV. Sample Preparation . . . . .	491
V. Mechanics of the Assay . . . . .	492
VI. Measuring the Response . . . . .	494
VII. Computation of Answers . . . . .	495

*7.7 Pantothenic Acid and Related Compounds*

ORSON D. BIRD

I. Introduction . . . . .	497
II. Methods of Treating Natural Products to Release Total Pantothenate Activity . . . . .	500
III. Assay Procedures for Components of Co A in Natural Products . . . . .	503
IV. Assay Procedures for Pantothenic Acid and Panthenol in Pharmaceutical Products . . . . .	510

*7.8 Riboflavin*

FREDERICK KAVANAGH

Text . . . . .	519
----------------	-----

*7.9 Turbidimetric Assay for Thiamine*

HELEN R. SKEGGS

I. Test Organism . . . . .	522
II. Standard Solution . . . . .	522
III. Stability of Compound . . . . .	522
IV. Preparation of Sample for Assay . . . . .	522
V. Preservation of Test Organism . . . . .	523
VI. Preparation of Inoculum . . . . .	524
VII. Media . . . . .	524
VIII. Design of Assay . . . . .	524
IX. Assay Conditions . . . . .	525
X. Reading the Assay . . . . .	525
XI. Calculation of Results . . . . .	525

*7.10 Vitamin B<sub>12</sub> and Congeners*

HELENE NATHAN GUTTMAN

I. Introduction . . . . .	527
II. Turbidimetric Methods . . . . .	530
III. Plate Methods . . . . .	544
IV. Nonmicrobiological Methods . . . . .	549

7.11 *Lactobacillus leichmannii* Assay for Vitamin B<sub>12</sub>

HELEN R. SKEGGS

I. Test Organism . . . . .	552
II. Standard Solutions . . . . .	553
III. Stability of Cobalamins . . . . .	553
IV. Activity and pH . . . . .	554
V. Preparation of Sample for Assay . . . . .	554
VI. Preservation of Test Organisms . . . . .	558
VII. Preparation of Inoculum . . . . .	559
VIII. Media . . . . .	559
IS. Design of the Assay . . . . .	563
X. Assay Conditions . . . . .	563
XI. Special Precautions . . . . .	563
XII. Reading the Assay . . . . .	565

## CHAPTER 8

*Amino Acids*

GERALD D. SHOCKMAN

I. Introduction . . . . .	568
II. Comparison of Microbiological Assays to Other Available Methods . . . . .	569
III. The Assay Organisms . . . . .	571
IV. The Lactic Acid Bacteria ( <i>Lactobacteriaceae</i> ) . . . . .	580
V. Measurement of Response to Amino Acids . . . . .	600
VI. Validity, Specificity, Reliability, and Calculation of Results of Amino Acid Assays . . . . .	606
VII. Preparation of Sample for Assay . . . . .	613
VIII. Assay Media . . . . .	621
IX. Apparatus, Instruments, General Methods, and Techniques . . . . .	626
X. Recommended Turbidimetric Assays . . . . .	643
XI. Recommended Titrimetric Assays . . . . .	665
XII. Alternative Methods for Amino Acid Assays . . . . .	669
XIII. Inhibition Assays . . . . .	671

## CHAPTER 9

*Glucose*

FREDERICK KAVANAGH

I. Organism . . . . .	675
II. Inoculum . . . . .	675
III. Glucose Assay . . . . .	676
<i>Author Index</i> . . . . .	679
<i>Subject Index</i> . . . . .	692
