

## CONTENTS

Preface	13
1. Introduction. The Importance, Purpose and Requirements of Contemporary Analytical Chemistry	14
2. Contemporary Trends in Analytical Chemistry	21
3. Sampling and Sample Preparation for Analysis. Concentration Techniques	36
4. The Analogue Processing of Signals from Sensors Employed in Analytical Chemistry	53
5. Modern Polagraphic Methods in Chemical Analysis	75
6. Analytical Capillary Electrophoresis	97
7. Contemporary Trends in the Use of Ion-Selective Electrodes in the Analysis of Organic Substances	142
8. The Principles and Theory of Chromatography	165
9. The Theory of Column Liquid Chromatography in Reversed-Phase Systems	205
10. Progress in Instrumentation for Liquid Chromatography	237
11. Liquid Chromatography with Small-Bore Columns	270
12. Advances in the Preparation of Glass and Fused-Silica Capillary Columns for Gas Chromatography	294
13. Field-Flow Fractionation	325
14. Chemical Ionization Mass Spectrometry and its Utilization for the Analysis of Organic Substances	352
15. The Application of Modern Chromatographic and Electromigration Methods in Biochemical Analysis	379
16. Chemometrics in the Instrumental Laboratory	406
17. Some Important Considerations in the Selection of an Analytical Method and Optimization of Analytical Procedures	466
Index	478
