

CONTENTS

Introduction	1
To Sample the Moon	3
A Lunar Sample	3
Conclusion	15
Role of Homogeneity in Powder Sampling	16
Sampling Theory	18
Experimental Work	22
Results	25
How to Sample a Mountain	30
A Model of Geochemical Variation	31
The Problem of Geochemical Error	33
A Geochemical Example	34
Conclusion	36
Collection and Handling of Physical Evidence for a Forensic Laboratory	37
Protecting the Scene of a Crime	38
Documentation of the Location	39
Collection of the Potential Evidence	39
Preservation of the Evidence	41
Labeling Requirements	42
Chain-of-Custody Considerations	42
Letter of Transmittal	43
Collection of Reference Materials	43
Conclusion	43
How and What to Sample in the Analytical Gap	45
Instrumentation for Stabilization	46
Instrumentation for Viewing the Discharge	51
What to View	56
Fully Resolved Spectra	62
Practical Application	67

Problems in Manufacture of National Bureau of Standards Cast Metal Standard Reference	
Materials	72
The Ductile Irons	72
The Blast Furnace Irons	81
The Cast Steels and High Temperature Alloys	84
The Combination Chemical Spectrographic SRMs	85
Conclusion	87
Problems in Sampling Ferroalloys with Emphasis on Ferrosilicon	88
Manufacturing Procedures for Ferroalloys	88
Metallurgical Structures of Ferrosilicon	89
Sampling Procedure	91
Selection of the Sample	92
Conclusions	96
Sampling and On-Stream X-Ray Control of Portland Cement Raw Mix Slurry	97
Laboratory Investigation	99
Plant Raw Mix Control	102
Conclusions	108
Sampling and Analysis for an Oxygen Steel Shop	110
Sampling of Preliminary Steel Samples	110
Analysis of Preliminary Steel Samples	112
Sampling for Final Heat Analysis	114
Discussion	116
Alternative Sampling and Analysis Methods	119
Slag Samples	121
Summary	121
Paper Fiber Filters for Sampling Trace Metals in Airborne Particulate Matter	123
Experimental	124
Discussion	126
Conclusion	131
