

CONTENTS

CHAPTER 1	THE SCOPE OF TRACE AND ULTRATRACE ANALYSIS BY HPLC	1
1.1.	Sampling and Sample Preparation	2
1.2.	Method Validation and Interlaboratory Variations	3
1.3.	Methodology	3
1.4.	Select Applications	5
1.4.1.	Biotechnology	5
1.4.2.	Diagnostic Studies	7
1.4.3.	Discovery of New Compounds	8
1.4.4.	Beverages/Food	8
1.4.5.	Fuel	9
1.4.6.	Pharmacokinetic Studies/Metabolic Activity	9
1.4.7.	<i>In Vivo</i> Studies	12
	References	13
CHAPTER 2	THEORETICAL CONSIDERATIONS	15
2.1.	Peak Width	16
2.2.	Theoretical Plate Equations	19
2.3.	Peak Broadening	23
2.4.	Considerations for HPLC Equipment	25
2.5.	Detection Limits	29
2.6.	High-Resolution Liquid Chromatography	31
2.7.	Various Routes to High Resolution	32
2.8.	Optimum Column Selection: Conventional versus Small-Practice versus Microbore Columns	32
	References	34

CHAPTER 3	EQUIPMENT CONSIDERATIONS	37
3.1.	Solvent Delivery Systems	38
3.1.1.	Solvent Delay and Transition	47
3.1.2.	Pulse Compensation	49
3.1.3.	Corrosive Solutions	49
3.2.	Equipment-Related Problems	50
3.2.1.	Dispersion in Columns	52
3.2.2.	Dispersion in Tubes	53
3.2.3.	Artifact Peaks	53
3.3.	Separation Conditions	55
3.3.1.	Resolution	56
3.3.2.	Gradient Elution	58
3.4.	Microcolumn HPLC	59
3.4.1.	Sample Introduction	64
3.4.2.	Detector	66
3.4.3.	Tubular Connections	67
3.4.4.	Select Applications	69
	References	72
CHAPTER 4	SENSITIVE DETECTORS IN HPLC	75
4.1.	UV Detectors	77
4.2.	Fluorescence Detectors	82
4.2.1.	Miscellaneous Luminescence Detectors	88
4.3.	Electrochemical Detectors	91
4.4.	Refractive Index Detectors	102
4.5.	Mass Spectrometric Detectors	105
4.6.	Miscellaneous Detectors	111
	References	115
CHAPTER 5	SAMPLE PREPARATION	121
5.1.	Precipitation of Undesirable Components	121
5.2.	Liquid-Solid Extraction	122
5.3.	Liquid-Liquid Extraction	122
5.3.1.	Choice of Solvent	124
5.3.2.	Mixing	125

5.3.3. Salting-Out	126
5.3.4. Partition Coefficients	126
5.4. Ultrafiltration	129
5.5. Ion-Pair Extraction	130
5.6. Derivatization	131
5.7. Complex Formation	131
5.8. Freeze-Drying	132
5.9. Solid-Phase Extraction	132
5.9.1. Solid-Phase Extraction Columns	135
5.10. Ion Exchangers	138
5.11. Specialized Columns	140
5.12. Preconcentration	143
5.13. Precolumn Switching	145
5.14. Cleanup Procedures for Feeds	147
5.15. Miscellaneous	155
References	156

CHAPTER 6	METHOD DEVELOPMENT FOR TRACE AND ULTRATRACE ANALYSIS	161
6.1.	General Considerations	162
6.1.1.	Sample Properties	163
6.1.2.	Separation Conditions	164
6.1.3.	Resolution	166
6.2.	Column Selection	166
6.2.1.	Column Evaluations	169
6.3.	Mobile-Phase Selection in HPLC	170
6.3.1.	Solvent Classification	171
6.3.2.	Mobile-Phase Additives	175
6.4.	Modes of Chromatography	175
6.4.1.	Adsorption Chromatography	175
6.4.2.	Normal Bonded Phases	178
6.4.3.	Reversed-Phase Chromatography	180
6.4.4.	Ion-Exchange Chromatography	185
6.5.	Special Considerations	193
6.5.1.	Effect of Temperature	193
6.5.2.	Gradient Elution	195

6.5.3. Multimodal Liquid Chromatography	198
References	204
CHAPTER 7 SELECTIVITY OPTIMIZATION FOR TRACE AND ULTRATRACE ANALYSIS	209
7.1. Adsorption/Normal-Phase Chromatography	209
7.1.1. Solvent Strength	210
7.1.2. Modulators	213
7.1.3. Mobile-Phase Optimization Strategies	214
7.1.4. Effect of Sample Structure on Retention	215
7.1.5. Mobile-Phase Effects in Normal-Phase Chromatography	218
7.1.6. Solvent Strength Adjustment	219
7.1.7. Selectivity Effects	220
7.2. Reversed-Phase Chromatography	220
7.2.1. Selectivity of Reversed-Phase	222
7.2.2. Column Efficiency	223
7.2.3. Problems with HPLC Columns	224
7.2.4. Column Evaluations	225
7.2.5. Retention Mechanism	229
7.2.6. Eluotropic Solvent Scale	231
7.2.7. Mobile-Phase Selection and Optimization	235
7.2.8. Effect on Selectivity	239
7.2.9. Temperature Selectivity	241
7.3. Ion-Pair Chromatography	242
7.3.1. Theoretical Considerations	244
7.3.2. Columns	247
7.3.3. Mobile-Phase Selection and Optimization	250
7.3.4. Other Separation Variables	259
7.3.5. Retention Mechanism	260
7.4. Computer-Based Optimizations	268
References	272

CHAPTER 8	OPTIMIZING DETECTABILITY	279
8.1.	Detection Limits and Noise	280
8.2.	Column Evaluations for Detectability Optimization	281
8.3.	Detector Evaluation and Optimizations	287
8.4.	Derivatization	291
8.5.	Miscellaneous Approaches	294
	References	300
CHAPTER 9	APPLICATIONS	303
9.1.	Pharmaceutical/Biomedical	303
9.1.1.	Pharmaceutical Purity	303
9.1.2.	Method Development Strategies	304
9.2.	Food	335
9.2.1.	Reliability of Data	335
9.2.2.	Medicated Feeds	340
9.2.3.	Dairy Products	346
9.2.4.	Seafood	350
9.2.5.	Meat Products	356
9.2.6.	Fruits and Vegetables	366
9.2.7.	Beverages	377
9.3.	Environment	382
9.3.1.	Sample Preparation	382
9.3.2.	Applications	386
9.4.	Cosmetics	398
	References	400
