

# CONTENTS

<b>CHAPTER 1 INTRODUCTION TO RADIOCHEMISTRY</b>	<b>1</b>
1.1. The Discovery of Radioactivity and Evolution of Nuclear Theory	1
1.2. Forces in Matter and the Subatomic Particles	20
1.2.1. Forces in Nature	20
1.2.2. The Subatomic Particles	21
1.3. Nuclides and Natural Decay Chains	22
1.3.1. Nuclides and Symbols	23
1.3.2. Classification of Nuclides	23
1.3.3. Chart of the Nuclides	25
1.3.4. Natural Decay Chains	28
1.3.5. An Extinct Natural Decay Chain	31
<b>CHAPTER 2 TYPES OF RADIOACTIVE DECAY</b>	<b>35</b>
2.1. Alpha-Particle Decay	36
2.2. Beta Decay	41
2.2.1. Negatron Decay	41
2.2.2. Positron Decay	43
2.2.3. Electron Capture (EC or $\epsilon$ )	45
2.3. Gamma Decay	46
2.3.1. Pure Gamma-Ray Emission	48
2.3.2. Internal Conversion (IC)	48
2.3.3. Pair Production (PP)	49
2.4. Branching Decays and Decay Schemes	50
2.5. Less Common Decay Modes	50
2.5.1. Spontaneous Fission Decay	50
2.5.2. Delayed-Neutron Emission	52
2.5.3. Delayed-Proton Emission	53
2.5.4. Double-Beta Decay	53
2.5.5. Two-Proton Decay	54
2.5.6. $^{14}\text{C}$ and Other Cluster Emission Decay	54

<b>CHAPTER 3 NUCLEAR CHEMISTRY AND MASS-ENERGY RELATIONSHIPS</b>	<b>57</b>
3.1. Description of the Nucleus	57
3.2. Nuclear Properties	61
3.2.1. Angular Momentum and Nuclear Spin	61
3.2.2. Magnetic Moment ( $\mu$ )	61
3.2.3. Parity and Symmetry	62
3.3. Models of Nuclear Structure	62
3.3.1. Shell Model (Single Particle Model)	63
3.3.2. Fermi Gas Model	65
3.3.3. Liquid Drop Model	66
3.3.4. Optical Model (Cloudy Crystal Ball Model)	67
3.3.5. Collective Model	67
3.4. Mass-Energy Relationships	67
3.4.1. Mass-Energy Equivalence	68
3.4.2. Energy Changes in Nuclear Reactions	69
3.4.3. Energy Changes in Radioactive Decay	74
3.4.4. Closed-Cycle Decay for Mass-Energy Calculation	75
3.4.5. Semiempirical Binding Energy Equation	76
3.4.6. Nuclear Energy Surface Diagrams	78
<b>CHAPTER 4 NUCLEAR REACTIONS</b>	<b>85</b>
4.1. Types of Nuclear Reactions	85
4.1.1. Scattering Reactions	85
4.1.2. Other Reactions	86
4.2. Energetics of Nuclear Reactions	87
4.2.1. Momentum Correction	88
4.2.2. Coulomb Barrier Correction	89
4.3. Cross Sections for Nuclear Reactions	90
4.3.1. Measurement of Cross Section	92
4.3.2. Excitation Functions	96
4.4. Reaction Mechanisms	100
4.4.1. Compound-Nucleus Formation	100
4.4.2. Direct Interactions	102
4.5. Special Nuclear Reactions	103
4.5.1. Neutron-Induced Fission	103
4.5.2. Fusion	106

4.5.3. Heavy-Ion Reactions	107
4.5.4. Photonuclear Reactions	107
<b>CHAPTER 5 RATES OF NUCLEAR DECAY</b>	<b>113</b>
5.1. Rates of Radioactive Decay	113
5.1.1. Half-life and Average Life	114
5.2. Units of Radioactive Decay	116
5.3. Branching Decay	118
5.4. Experimental Methods for Determination of Half-life	119
5.4.1. Long Half-lives	119
5.4.2. Medium Half-lives	124
5.4.3. Short Half-lives	127
5.4.4. Very Short Half-lives	129
5.5. Estimation of Half-life from Theory and Systematics	131
5.6. Growth of Radioactive Products in a Decay Chain	133
5.6.1. Parent with a Single Radioactive Daughter	134
5.6.2. Parent with Multiple Radioactive Daughters	138
5.7. Growth of Products in a Neutron Flux	140
<b>CHAPTER 6 INTERACTIONS OF RADIATION WITH MATTER</b>	<b>147</b>
6.1. Modes of Interaction	147
6.2. Heavy Charged-Particle Interactions	149
6.2.1. Range Relationships for Heavy Charged Particles	149
6.2.2. Stopping Power	154
6.3. Beta-Particle Interactions	154
6.3.1. Range Relationships for Beta Particles	156
6.3.2. The Feather Method	158
6.3.3. Bremsstrahlung Radiation	160
6.3.4. Čerenkov Radiation	161
6.3.5. Beta Backscatter	161
6.3.6. Positron Interactions	161
6.4. Gamma-Ray Interactions	162
6.4.1. Photoelectric Effect	162
6.4.2. Compton Scattering	164
6.4.3. Pair Production	167
6.4.4. Mathematics of Gamma-Ray Absorption	170

6.5. Neutron Interactions	173
6.6. Physical Effects of Radiation on Matter	---
<b>CHAPTER 7 HEALTH PHYSICS</b>	<b>179</b>
7.1. Radiation Quantities and Units	179
7.1.1. Measurement of Exposure	180
7.1.2. Measurement of Dose	180
7.1.3. Measurement of Dose Equivalent	181
7.1.4. Simple Calculations of Dose and Exposure	184
7.2. Biological Effects of Radiation	---
7.2.1. Stochastic Effects	187
7.2.2. Nonstochastic Effects	190
7.3. Sources of Radiation Exposure	192
7.3.1. Natural Sources of Radiation	192
7.3.2. Man-made Sources of Radiation	195
7.4. Radiation Protection and Control	196
7.4.1. Risk	196
7.4.2. Regulatory Bodies and Objectives of Radiation Standards	197
7.4.3. Recommended Levels for Maximum Exposure	200
7.4.4. Health Physics Considerations for the Radioanalytical Laboratory	200
<b>CHAPTER 8 RADIOCHEMISTRY INSTRUMENTATION</b>	<b>205</b>
8.1. Definitions of Operating Characteristics	205
8.2. Gas-Filled Detectors	207
8.2.1. Ionization Chambers	209
8.2.2. Proportional Counters	213
8.2.3. Geiger-Müller Counters	218
8.3. Scintillation Detectors	220
8.3.1. Inorganic Scintillation Detectors	221
8.3.2. Organic Scintillators	225
8.3.3. The Photomultiplier Tube	227
8.4. Solid-State Semiconductor Detectors	228
8.4.1. Theory of Semiconductor Detectors	229
8.4.2. Surface Barrier Detectors	232
8.4.3. Lithium-Drifted Semiconductor Detectors	233
8.4.4. Intrinsic Germanium Detectors	236

8.5. Other Components of Electronic Detector Systems	236
8.6. Nonelectronic Detection Systems	242
8.6.1. Photographic Plates	242
8.6.2. Chemical Detectors	243
8.6.3. Calorimetric Detectors	243
8.6.4. Cloud and Bubble Chambers	244
8.6.5. Thermoluminescence Detectors (TLDs)	245
8.7. Special Neutron Detectors	245
8.7.1. Thermal Neutron Detectors	246
8.7.2. Fast Neutron Detectors	246
<b>CHAPTER 9 NUCLEAR ACTIVATION ANALYSIS</b>	<b>253</b>
9.1. Principles of Activation Analysis	253
9.1.1. Overview of Nuclear Activation Analysis Methods	253
9.1.2. Advantages and Disadvantages of Nuclear Activation Methods	255
9.1.3. Sources of Activating Particles or Radiations	259
9.1.4. Interferences in Activation Analysis	267
9.2. Neutron Activation Analysis (NAA)	271
9.2.1. Overview of NAA Procedures	272
9.2.2. Calculations of NAA	276
9.2.3. Thermal Neutron Activation Analysis (TNAA)	279
9.2.4. Epithermal Neutron Activation Analysis (ENAA)	285
9.2.5. Fast Neutron Activation Analysis (FNAA)	289
9.2.6. Radiochemical Neutron Activation Analysis (RNAA)	289
9.3. Prompt-Gamma Neutron Activation Analysis (PGNAA)	291
9.4. Charged-Particle Activation Analysis (CPAA)	292
9.4.1. Principles of CPAA	292
9.4.2. Calculations of CPAA	293
9.4.3. Applications of CPAA	294
9.4.4. Particle-Induced Gamma-Ray Emission (PIGE)	294
9.5. Instrumental Photon Activation Analysis (IPAA)	296
9.6. Special Activation Analysis Techniques	297
9.6.1. Derivative Activation Analysis (DAA)	297
9.6.2. Cyclic Activation Analysis	300
9.6.3. Secondary Particle Activation Analysis	302
9.6.4. Coincidence Techniques in Activation Analysis	302
9.6.5. Localization Methods in Activation Analysis	303

<b>CHAPTER 10</b>	<b>RADIOTRACER METHODS</b>	<b>313</b>
10.1.	General Aspects of Radiotracer Use	313
10.1.1.	Assumptions Made in Tracer Studies	313
10.1.2.	Factors in the Choice of a Radiotracer	314
10.1.3.	Production of Radiotracers	315
10.1.4.	Advantages and Disadvantages of Radiotracer Use	316
10.2.	Isotope Dilution Analysis	318
10.2.1.	Theory and Calculations for DIDA	318
10.2.2.	Applications of IDA	319
10.2.3.	Variations of IDA	321
10.3.	Tracers in the Study of Chemical Processes	323
10.3.1.	Equilibrium Processes	323
10.3.2.	Analytical Applications	325
10.3.3.	Studies of Reaction Mechanisms	327
10.4.	Other Applications of Radiotracers and Radionuclides	327
10.5.	Nuclear Medicine and Pharmacy	331
10.5.1.	General Aspects of Radiopharmaceutical Use	331
10.5.2.	Nuclear Properties of Indicator Nuclides	332
10.5.3.	In Vivo Diagnostic Procedures	338
10.5.4.	In Vitro Diagnostic Testing: Radioimmunoassay	340
10.5.5.	Therapeutic Uses of Radiation	342
<b>CHAPTER 11</b>	<b>ION BEAM ANALYSIS AND CHEMICAL APPLICATIONS OF RADIOACTIVITY</b>	<b>347</b>
11.1	Particle-Induced X-Ray Emission	347
11.1.1.	Overview of the PIXE Process	348
11.1.2.	Projectile Acceleration and Target Preparation	348
11.1.3.	Ionization and X-Ray Emission	351
11.1.4.	Detection and Analysis of X Rays	351
11.1.5.	Applications of PIXE	353
11.1.6.	PIXE Variations	354
11.2.	Rutherford Backscattering Spectrometry	355
11.2.1.	The Scattering Reaction	356
11.2.2.	Surface Analysis Using RBS	357
11.2.3.	Depth Profiling Using RBS	359
11.2.4.	Channeling Effects	362
11.2.5.	Applications of RBS	363

11.3. Mössbauer Spectroscopy	364
11.4. Hot-Atom Chemistry	367
11.4.1. Production of Hot Atoms	369
11.4.2. Energy Calculations	369
11.4.3. Applications of Hot-Atom Reactions	371
11.5. Radiation Chemistry	373
<b>CHAPTER 12 NUCLEAR DATING METHODS</b>	
12.1. General Principles of Nuclear Dating Methods	379
12.2. Radiocarbon Dating	382
12.3. Tritium Dating	386
12.4. U-Pb and Th-Pb Methods	387
12.4.1. Simple He Accumulation Method	387
12.4.2. Single-Decay-Chain Methods	387
12.4.3. Pb-Pb Method	389
12.5. Rb-Sr Method	391
12.6. K-Ar Method	395
12.6.1. Standard Method	395
12.6.2. Incremental Heating Method	395
12.7. Pleochroic Halos	397
12.8. Fission Tracks	397
12.9. Special Methods	399
12.9.1. Cosmic-Ray Exposure Ages of Meteorites	399
12.9.2. Terrestrial Ages of Meteorites	400
12.9.3. Extinct Natural Radionuclides	401
12.9.4. Re-Os Method	403
12.9.5. Lu-Hf Method	403
12.9.6. K-Ca Method	403
<b>CHAPTER 13 THE ORIGIN OF THE CHEMICAL ELEMENTS</b>	
13.1. Cosmology	407
13.1.1. Elemental Abundances	408
13.1.2. Cosmic Abundance Curves	413
13.2. Primordial Nucleosynthesis	414
13.3. Stellar Evolution	417
13.3.1. Star Populations	417
13.3.2. Evolution of a Star	418

13.4. Stellar Nucleosynthesis	420
13.4.1. Hydrogen Fusion	420
13.4.2. The CNO Bi-cycle	421
13.4.3. Helium Burning	423
13.4.4. Heavier Element Burning	424
13.4.5. The s-Process	426
13.4.6. The r- and p-Processes	428
13.4.7. Supernovae	430
13.5. The Solar Neutrino Problem	431
13.6. Synthesis of Be, B, and Li	433
<b>CHAPTER 14 PARTICLE GENERATORS</b>	<b>437</b>
14.1. Natural Particle Sources	437
14.2. Nuclear Reactors	438
14.2.1. The Fission Process	438
14.2.2. Major Components of Reactors	444
14.2.3. Types of Reactors	450
14.2.4. Applications of Reactors	452
14.3. Accelerators: Basic Components	458
14.4. Cockroft–Walton Accelerators	461
14.5. Van de Graaff Accelerators	462
14.6. Linear Accelerators	465
14.7. Cyclotrons	466
14.8. Synchrotrons	470
14.9. Large Accelerators for Nuclear Physics Research	472
<b>APPENDIX A STATISTICS FOR RADIOCHEMISTRY</b>	<b>475</b>
<b>APPENDIX B GENERAL REFERENCES AND DATA SOURCES</b>	<b>483</b>
<b>APPENDIX C NUCLIDIC PROPERTIES</b>	<b>485</b>
<b>APPENDIX D USEFUL CONSTANTS AND CONVERSIONS</b>	<b>517</b>
<b>INDEX</b>	<b>510</b>
