

CONTENTS

CUMULATIVE LISTING OF VOLUMES	xi
CHAPTER 1 INTRODUCTION	1
References	2
CHAPTER 2 THE AIM OF ANALYTICAL CHEMISTRY	5
2.1 The Analytical Process	6
2.2 The Analytical System	9
2.3 The Analytical Signal	13
2.4 Analytical Result and Analytical Information	17
References	18
CHAPTER 3 BASIC CONCEPTS OF INFORMATION THEORY	21
3.1 Probability	22
3.1.1 Mathematical Definition	23
3.1.2 Statistical Definition	24
3.2 Random Quantity	25
3.3 Two-Dimensional Random Quantities	28
3.4 Some Specific Probability Distributions	29
3.5 Methods of Statistical Inference	34
3.6 Information Uncertainty	35
3.7 Information Content	38
3.8 Information Gain and Transinformation	40
References	42

CHAPTER 4	IDENTIFICATION OF COMPONENTS	45
4.1	Methods of Identification Analysis	45
4.2	Information Uncertainty and Information Content of Identification Results	51
4.3	Practical Applications	56
	References	61
CHAPTER 5	QUALITATIVE ANALYSIS	63
5.1	Methods of Qualitative Analysis	63
5.2	Information Uncertainty and Information Contribution of Qualitative Results	65
5.3	Practical Applications	72
	References	74
CHAPTER 6	QUANTITATIVE ANALYSIS	77
6.1	Single-Component Analysis	79
6.2	Accuracy of Analytical Results	85
6.3	Effect of Calibration on Information Gain	92
6.4	Application of Reference Materials for Quality Assessment	94
6.5	Trace Analysis	100
6.5.1	Methods of Trace Analysis	102
6.5.2	Information Content and Information Gain in Trace Analysis	106
6.5.3	Practical Applications	115
6.6	Effect of Precision and Accuracy of Results on Information Gain	116
6.6.1	General Aspects	116
6.6.2	Reporting Analytical Results and Information Gain	121

6.6.3	Practical Applications	124
	References	127
CHAPTER 7	MULTICOMPONENT ANALYSIS	131
7.1	Methods of Multicomponent Analysis	134
7.2	Information Amount of Results	140
7.3	Information Amount of Analytical Methods	143
7.4	Selectivity	149
7.5	Relevancy and Redundancy	152
7.6	Practical Applications	158
	References	163
CHAPTER 8	OPTIMUM ANALYTICAL STRATEGIES	165
8.1	Criteria for Choice of Analytical Method	166
8.2	Optimization of Analytical Procedure	172
8.3	Increase of Useful Information Amount in Instrumental Analysis by Signal Processing	173
8.3.1	Increasing the Signal-to-Noise Ratio	175
8.3.2	Improvement of Signal Resolution	178
8.4	System Basis for Seeking the Optimum Analytical Strategy	180
	References	181
CHAPTER 9	QUALITY ASSURANCE	185
9.1	Quality Control by Analytical Chemistry	185
9.2	Quality Assurance within Analytical Chemistry	193
9.3	Interlaboratory Comparisons	197
	References	203

CHAPTER 10	DISTRIBUTION ANALYSIS: MICROANALYSIS, SURFACE ANALYSIS, AND SCANNING METHODS	207
10.1	Geometrical Resolving Power	208
10.2	Potential Information Amount of Distribution-Analytical Methods	213
10.3	Information Amount of Distribution-Analytical Results	217
10.4	Simultaneous Determination of Content and Sample Position	218
10.5	Testing for Chemical Homogeneity	219
10.6	Practical Applications	224
	References	229
CHAPTER 11	STRUCTURE ANALYSIS	231
11.1	Information Amount of Qualitative Structure Analysis	235
11.2	Information Amount of Quantitative Structure Analysis	238
11.3	Information Amount of Structure-Analytical Methods	239
11.4	Practical Applications	243
	References	243
CHAPTER 12	CHEMOMETRICS: INFORMATION AMOUNT OF MULTIVARIATE DATA ANALYSIS	245
12.1	Pattern Recognition	248
12.2	Factorial Data Analysis	252
12.3	Practical Applications	253
	References	257
CHAPTER 13	INFORMATION THEORY— THEORETICAL BASIS OF ANALYTICAL CHEMISTRY?	259
	References	261
INDEX		263
