<b>PREFACE</b>	<b>xxi</b>
<b>CUMULATIVE LISTING OF VOLUMES IN SERIES</b>	<b>xxiii</b>
<b>CHAPTER 1 CHEMICAL SPECIATION: A DECADE OF PROGRESS</b>	
<i>S. Caroli</i>	
1.1. A Leap Ahead	
1.2. A Composite Picture	3
1.2.1. Some General Considerations	3
1.2.2. Selected Examples	8
1.2.2.1. <i>General Aspects</i>	8
1.2.2.2. <i>Instrumental Developments</i>	9
1.2.2.3. <i>Environmental Applications</i>	11
1.2.2.4. <i>Biological Applications</i>	16
1.3. A Look into the Future	18
References	18
<b>CHAPTER 2 DIRECT METHODS OF SPECIATION OF HEAVY METALS IN NATURAL WATERS</b>	<b>21</b>
<i>A. M. Mota and M. L. Simões Gonçalves</i>	
2.1. The Ecological Importance of Speciation	21
2.1.1. Different Types of Metal Species	22
2.1.2. Environmental Factors Affecting Speciation	23
2.2. Constituents of Natural Waters	25
2.2.1. Inorganic Constituents	25
2.2.2. Organic Matter	25

2.2.3. Colloids and Particulate Matter	27
2.3. Methodology for Speciation	28
2.3.1. Various Approaches	28
2.3.2. Kinetic Aspects	30
2.4. Direct Methods of Speciation	32
2.4.1. Introduction	32
2.4.2. Physical Techniques	34
2.4.2.1. <i>Centrifugation</i>	34
2.4.2.2. <i>Filtration</i>	35
2.4.2.3. <i>Ultrafiltration</i>	37
2.4.2.4. <i>Dialysis</i>	39
2.4.2.5. <i>Gel Filtration Chromatography</i>	40
2.4.3. Chemical Techniques	40
2.4.3.1. <i>Oxidative Destruction of Organic Matter</i>	40
2.4.3.2. <i>Liquid-Liquid Extraction</i>	41
2.4.3.3. <i>Ionic Exchange and Adsorbent Resins</i>	42
2.4.3.4. <i>Voltammetric Techniques</i>	44
2.4.3.4.1. <i>Metals Determined by Voltammetric Techniques</i>	47
2.4.3.4.2. <i>Major Factors Influencing the Voltammetric Signal of Natural Waters</i>	48
2.4.3.4.3. <i>Some Applications to Natural Waters</i>	51
2.4.4. Species-Specific Techniques	54
2.4.4.1. <i>Potentiometry with Ion-Specific Electrodes</i>	54
2.4.4.2. <i>Gas Chromatography and/or Hydride Generation</i>	57
2.4.4.3. <i>High-Performance Liquid Chromatography</i>	59
2.4.4.4. <i>Other Chemical Methods</i>	60
2.4.5. Bioassays	61
2.4.5.1. <i>Determination of Free Element Concentration and Toxicity</i>	61
2.4.5.2. <i>Comparison Between Biochemical and Chemical Processes</i>	62
2.4.6. Comprehensive Speciation Schemes	63

2.5. Fundamentals of Voltammetric Methods	68
2.5.1. General Comments	68
2.5.2. Speciation in Noncomplexing Media	70
2.5.3. Speciation in Complexing Media	70
2.5.3.1. <i>Inert Complexes</i>	71
2.5.3.1.1. <i>Speciation of M and ML</i>	71
2.5.3.1.2. <i>Complexing Titration Curves</i>	73
2.5.3.2. <i>Labile Complexes</i>	74
2.5.3.2.1. <i>Speciation from <math>i_m</math> Measurements</i>	75
2.5.3.2.2. <i>Speciation from <math>\Delta E</math> Measurements</i>	75
2.5.3.2.3. <i>Complexing Titration Curves</i>	77
2.5.3.3. <i>Quasi-labile Complexes</i>	79
2.5.4. Complexation of Heterogeneous Ligands	83
References	87

**CHAPTER 3 NONCHROMATOGRAPHIC METHODS OF ELEMENT SPECIATION BY ATOMIC SPECTROMETRY** **97**

*M. de la Guardia*

3.1. Introduction	97
3.2. Selective Atomization of Different Chemical Forms of the Same Element	100
3.3. Speciation Based on Selective Extractions	102
3.4. Speciation Based on Derivatization Procedures	105
3.5. Speciation Based on Selective Volatilization	110
3.6. Miscellaneous Methods	112
3.7. Concluding Remarks	114
References	115

**CHAPTER 4 DEVELOPMENT OF NEW METHODS OF SPECIATION ANALYSIS** **121**

*I. T. Urasa*

4.1. Introduction	121
4.2. Factors Affecting Element Speciation	122

4.2.1. Sample Treatment and Processing	122
4.2.2. Sample Acidification	123
4.3. Analytical Aspects	125
4.3.1. Measurement Methods	125
4.3.2. Element-Selective Detectors	129
4.3.3. Coupling of IC with DCP–AES	132
4.3.4. Detection Power	133
4.3.5. Influence of the Mobile Phase on Detector Performance	
4.3.6. Influence of the Chemistry of the Analyte and Sample Matrix	135
4.4. Applications	140
4.4.1. Chromium Speciation	140
4.4.2. Monitoring of the Element Transformation Rate	
4.4.3. Application to Clinical and Related Measurements	144
4.4.4. Solution Chemistry of Phosphorus	147
4.4.5. Determination of Trace Heavy Metals in Water	
4.4.6. Determination of the Binding Capacity of Natural Waters	149
4.5. Conclusions	150
References	151

## **CHAPTER 5 NEUTRON ACTIVATION ANALYSIS AND RADIOTRACER METHODS IN BIOINORGANIC CHEMISTRY**

*H. A. Das and J. R. W. Woittiez*

5.1. Introduction	155
5.1.1. Historic Background	155
5.1.2. Definitions and Limitations	157
5.1.3. General Aspects	157
5.2. Outline of Neutron Activation Analysis	161

5.2.1. Principles	161
5.2.2. Apparatus	164
5.2.3. Irradiation Facilities for NAA	166
5.2.3.1. <i>Nuclear Reactors</i>	166
5.2.4. Practical Aspects of NAA of Biological Materials	168
5.2.4.1. <i>NAA with Short-Lived Radionuclides at ECN</i>	168
5.2.4.2. <i>NAA with Long-Lived Radionuclides at ECN</i>	169
5.2.4.3. <i>Standards</i>	171
5.2.4.4. <i>Sampling and Sample Preparation</i>	172
5.2.4.5. <i>The Error Budget</i>	173
5.2.4.5.1. <i>Statistical Errors</i>	173
5.2.4.5.2. <i>Systematic Errors</i>	174
5.3. Separation of Proteins and Its Control by Radiotracers and Neutron Activation	174
5.3.1. General Remarks	174
5.3.2. Gel Filtration Chromatography	175
5.3.3. Gel-Element Interaction of Gel Filtration Materials	175
5.3.4. Radiotracer Experiments	178
5.3.5. Use of NAA to Detect Protein-Bound Elements	179
5.4. An Experiment Involving NAA of Desalted Human Serum	181
5.4.1. Purpose	181
5.4.2. Samples	181
5.4.3. The Procedure Using NAA	182
5.4.3.1. <i>NAA with Short-Lived Radionuclides</i>	182
5.4.3.2. <i>NAA with Long-Lived Radionuclides</i>	182
5.4.4. Results	182
5.4.4.1. <i>Desalting on Bio P-2</i>	183
5.4.4.1.1. <i>Short-Lived Radionuclides</i>	183
5.4.4.1.2. <i>Long-Lived Radionuclides</i>	185

## CONTENTS

5.5. Elements in Human Serum Proteins or Other Proteins and Related Radiotracer Experiments	187
5.5.1. General Remarks	187
5.5.2. Distribution of Trace Elements	188
5.5.3. Some Applications of Radiotracers	189
5.6. Conclusions	191
References	192

## CHAPTER 6 QUALITY CONTROL OF RESULTS OF SPECIATION ANALYSIS

*Ph. Quevauviller, E. A. Maier, and B. Griepink*

6.1. Introduction	
6.2. The Need for Development of New Analytical Techniques in Speciation Analysis	196
6.3. Overview of Quality Assurance Principles	197
6.3.1. General Remarks	197
6.3.2. Statistical Control	199
6.3.3. Comparison with Results of Other Methods	201
6.3.4. Use of Certified Reference Materials	201
6.3.5. Intercomparisons	202
6.4. Potential Sources of Error in Speciation Analysis	203
6.4.1. Extraction	204
6.4.2. Derivatization	205
6.4.3. Separation	207
6.4.4. Detection	209
6.4.5. Primary Calibrants and Internal Standards	209
6.4.6. Further Efforts to Improve the State of the Art and Method Validation	211
6.4.6.1. Determination of <i>As(III)</i> , <i>As(V)</i> , and <i>Organo-As Compounds</i>	214
6.4.6.2. Determination of <i>Butyl-</i> and <i>Phenyl-Sn Compounds</i>	215
6.4.6.3. Determination of <i>Methyl-Hg</i>	216

## CONTENTS

6.5. Errors in Trace Element Speciation in Sediments and Soils	217
6.6. Conclusions	219
References	220

## CHAPTER 7 ALUMINUM AND SILICON SPECIATION IN BIOLOGICAL MATERIALS OF CLINICAL RELEVANCE

*A. Sanz-Medel, B. Fairman, and Katarzyna Wróbel*

7.1. Introduction	
7.2. Total Aluminum and Silicon Analyses in Biological Materials	225
7.2.1. Total Aluminum Determination	227
7.2.2. Total Silicon Determination	229
7.3. Aluminum Speciation Techniques	232
7.3.1. Analytical Techniques for Speciation of Aluminum	
7.3.1.1. <i>Nonchromatographic Techniques: Determination of Ultrafiltrable Serum Aluminum</i>	232
7.3.1.2. <i>Chromatographic Techniques: Aluminum-Protein Speciation</i>	234
7.3.1.3. <i>Low-Molecular-Weight Aluminum Species: Aluminum-Citrate</i>	238
7.3.1.4. <i>Aluminum-Complexing Drugs: Speciation of Aluminum-Desferrioxamine</i>	239
7.4. The Role of Aluminum and Silicon in Neurological Disorders: The Quest for Speciation	243
7.4.1. Dialysis Encephalopathy and Other Diseases	243
7.4.2. Alzheimer's Disease	243
7.4.3. Species Favoring Aluminum and Silicon Transport to the Brain	244
7.5. Does Silicic Acid Prevent Aluminum Toxicity via Formation of Aluminosilicates?	246
7.6. Conclusions	246
References	248

<b>CHAPTER 8</b>	<b>SPECIATION OF TRACE ELEMENTS IN MILK BY HIGH-PERFORMANCE LIQUID CHROMATOGRAPHY COMBINED WITH INDUCTIVELY COUPLED PLASMA ATOMIC EMISSION SPECTROMETRY</b>	<b>255</b>
	<i>E. Coni, A. Alimonti, A. Bocca, F. La Torre, D. Pizzuti, and S. Caroli</i>	
8.1.	Introduction	255
8.2.	Experimental Work	258
8.2.1.	General Aspects	258
8.2.2.	Sampling Procedure	259
8.2.3.	Determination of the Total Element Concentrations	260
8.2.3.1.	<i>Sample Treatment</i>	260
8.2.3.2.	<i>Analysis</i>	261
8.2.4.	Determination of Chemical Species	263
8.2.4.1.	<i>Sample Treatment</i>	263
8.2.4.2.	<i>Analysis</i>	264
8.3.	Evaluation of Data	265
8.3.1.	Total Concentrations of Elements	265
8.3.2.	Concentration of Element Species	267
8.3.3.	Relative Distribution of Trace Elements	273
8.4.	Conclusions	282
	References	283
<b>CHAPTER 9</b>	<b>ORGANOTIN COMPOUNDS IN MARINE ORGANISMS</b>	<b>287</b>
	<i>S. Chiavarini, C. Cremisini, and R. Morabito</i>	
9.1.	Introduction	287
9.2.	Toxicity	289
9.3.	Metabolism and Accumulation	297
9.4.	Legal Provisions	306
9.4.1.	France	306
9.4.2.	United Kingdom	307
9.4.3.	United States	307
9.4.4.	Italy	308
9.4.5.	Other Countries	308

9.5. Regional Cases	308
9.5.1. France	308
9.5.2. United Kingdom	309
9.5.3. United States	310
9.5.4. Italy	315
9.5.5. Other Countries	319
9.6. Conclusions	320
References	321
<b>CHAPTER 10 TIN SPECIATION MONITORING IN ESTUARINE AND COASTAL ENVIRONMENTS</b>	<b>331</b>
<i>Ph. Quevauviller and O. F. X. Donard</i>	
10.1. Introduction	331
10.2. The Development of Environmental Concerns Regarding Sn Compounds	333
10.3. Geochemical Pathways and Transformations	335
10.3.1. Methylation Reactions	335
10.3.2. Volatilization Reactions	336
10.3.3. Degradation Reactions	337
10.4. Sources of Environmental Variability	339
10.4.1. Temporal Variability	340
10.4.2. Spatial Variability	341
10.4.3. Partitioning in Marine Waters and Sediments	342
10.5. Strategies for Organotin Monitoring	347
10.5.1. "Sampling Program Design	347
10.5.2. Choice of Samples	348
10.5.3. Water Samples	348
10.5.4. Suspended Matter Samples	353
10.5.5. Sediment Samples	354
10.5.6. Sample Storage	354
10.5.7. Determination	355
10.6. Conclusions	356
References	357

## CHAPTER 11 THE ANODIC STRIPPING VOLTAMMETRIC TITRATION PROCEDURE FOR STUDY OF TRACE METAL COMPLEXATION IN SEAWATER

*G. Scarponi, G. Capodaglio, C. Barbante, and P. Cescon*

11.1.	Introduction	
11.2.	Methodology: Theoretical Aspects	
11.2.1.	Single 1:1 Complex Formation	
11.2.2.	Ligand Competition: Two 1:1 Complexes of One Metal with Two Ligands	
11.2.2.1.	<i>The van den Berg Approach</i>	
11.2.2.2.	<i>The Ruzic Approach</i>	
11.2.2.3.	<i>Ligand Competition: Generalization</i>	
11.2.3.	Metal Competition: Two 1:1 Complexes of One Ligand with Two Metals	383
11.2.4.	Other than 1:1 Complex Formation	392
11.3.	Methodology: The Instrumental Approach	392
11.3.1.	DPASV Instrumentation	
11.3.2.	Preparation of the Thin-Mercury Film Electrode	
11.3.3.	Total Metal Concentration	395
11.3.4.	Metal Speciation (Voltammetric Titration of Ligands)	
11.3.5.	Defining the DPASV-Measured Species in a Seawater Sample	399
11.4.	Contamination Control	402
11.4.1.	Laboratory and Chemicals	403
11.4.2.	Sampling	405
11.4.3.	Filtration	406
11.4.4.	Storage	407
11.5.	Review of the Literature	408
11.5.1.	Copper	408
11.5.2.	Zinc and Cobalt	411
11.5.3.	Lead and Cadmium	412

## CONTENTS

11.6. Conclusions	413
References	414
<b>CHAPTER 12 PROBLEMS OF SPECIATION OF ELEMENTS IN NATURAL WATERS: THE CASE OF CHROMIUM AND SELENIUM</b>	<b>419</b>
<i>L. Campanella</i>	
12.1. Introduction	419
12.2. Chemical and Biological Aspects	420
12.3. The Case of Chromium	423
12.4. The Case of Selenium	432
12.4.1. Procedures	436
12.4.2. Application of the Speciation Model	436
12.5. Conclusions	441
References	442
<b>CHAPTER 13 ARSENIC SPECIATION AND HEALTH ASPECTS</b>	<b>445</b>
<i>S. Caroli, F. La Torre, F. Petrucci, and N. Violante</i>	
13.1. Introduction	445
13.2. Experimental Approaches	446
13.3. Ongoing Activities	451
13.4. Conclusions	459
References	461
