

CONTENTS

Preface	ix
Acknowledgments	xi
Cumulative Listing of Volumes in Series	xiii
CHAPTER 1 INTRODUCTION	1
CHAPTER 2 THEORY	3
2.1 Spectroscopy	3
2.2 Introduction to Atomic Spectroscopy	4
2.3 Quantitative Considerations of Transitions	6
2.3.1 Population of Atoms in a State: The Boltzmann Distribution	6
2.3.2 Einstein Coefficients	7
2.4 Electronic States of Atoms	8
2.4.1 Quantum Numbers for Electrons	9
2.4.2 Coupling Schemes, Term Symbols, and Selection Rules	10
2.4.3 Atomic Spectra	11
2.5 Measures of Transition Strengths: Transition Probabilities and Oscillator Strengths	12
2.6 Spectral Profiles of Absorption Lines	13
2.7 GFAAS Analytical Signal: Absorbance	15
2.8 Intensity of Absorbance in Terms of Fundamental Parameters	17
2.9 Nature of the Transient GFAAS Signal: Mechanism of Atom Formation in a Graphite Furnace	19
2.9.1 Surface Processes	20
2.9.2 Heterogeneous Solid–Gas Interactions	21
2.9.3 Gas-Phase Chemistry	23

2.9.4	Processes by Which Analyte Is Lost from the Tube	24
2.9.5	Monte Carlo Simulations of Atomization Processes	25
	References	26
CHAPTER 3	QUANTITATIVE GFAAS: CALIBRATION	31
3.1	General Analytical Methodology	31
3.2	Calibration Graphs	32
3.3	Method of Standard Additions	35
3.4	Method of Internal Standardization	36
3.5	Absolute Analysis	37
	References	38
CHAPTER 4	INSTRUMENTATION	39
4.1	Light Sources	39
4.1.1	Hollow Cathode Lamps	40
4.1.2	Electrodeless Discharge Lamps	43
4.1.3	Xenon Arc Lamps	43
4.1.4	Semiconductor Diode Lasers	44
4.2	Graphite Furnace	45
4.2.1	Graphite Tube Material and Design	46
4.2.2	Furnace Heating Cycle	49
4.2.3	Methods of Atomization	54
4.3	Wavelength Selectors	57
4.3.1	Monochromators	59
4.3.2	Échelle Monochromators	60
4.4	Detectors	60
4.5	Signal Processing, Readout, and Instrument Control	62
4.6	Background Correction	64
4.6.1	Nearby Line (Two-Line) Method	64
4.6.2	Continuum Source Method	66
4.6.3	Self-Reversal (Smith-Hieftje) Method	69
4.6.4	Zeeman Effect Method	73
4.6.4.1	<i>Inverse Longitudinal ac Zeeman</i>	77

4.6.4.2 *Inverse Transverse ac Zeeman* 83

4.6.4.3 *Inverse Transverse dc Zeeman* 84

4.6.5 Comparison of Background Correction Systems 84

4.7 Graphite Furnace Atomic Emission Spectrometry 90

4.8 Spectrometer Designs 92

4.8.1 Single-Element Instruments 93

4.8.2 Multielement Instruments 94

References 99

CHAPTER 5 INTERFERENCE-FREE ANALYSIS 105

5.1 Spectral Interferences 105

5.1.1 Spectral Overlaps 105

5.1.2 Background Attenuation 107

5.2 Chemical Interferences 113

5.3 Physical Interferences 116

References 117

CHAPTER 6 SAMPLE PREPARATION AND INTRODUCTION 119

6.1 Liquids 119

6.2 Gases 122

6.3 Solids 125

6.3.1 Wet Decomposition 125

6.3.2 Combustion 133

6.3.3 Fusion 133

6.3.4 Summary of Digestion Procedures 134

6.3.5 Solids Analysis with Slurry Sampling 134

6.3.6 Direct Solid Sampling 139

6.3.7 Laser Ablation 142

6.4 Preconcentration/Separation Methods 143

6.4.1 Extraction 144

6.4.2 Chromatography 146

6.4.3 Flow Injection Analysis 149

6.4.4 Other Preconcentration/Separation Methods 159

6.5 Metal Speciation 161

References 166

CHAPTER 7 PRACTICAL HINTS ON THE DETERMINATION OF ELEMENTS BY GFAAS	175
7.1 Applicability	175
7.2 Sampling, Sample Storage, and Sample Preparation	176
7.3 Quality Control Procedures	183
7.4 Development of GFAAS Methods	185
7.5 Troubleshooting	188
References	195
CHAPTER 8 COMMERCIAL GFAAS INSTRUMENTATION: TYPES, COSTS, AND TRAINING	197
8.1 Types and Costs of GFAAS Instrumentation	197
8.2 Consumables	200
8.3 Service and Maintenance	200
8.4 Training	201
CHAPTER 9 FUTURE OF GFAAS	203
APPENDIX A HISTORICAL BACKGROUND	205
A.1 Early Work in Atomic Spectroscopy (Before 1955)	205
A.2 Flame Atomic Absorption Spectrometry	205
A.3 Graphite Furnace Atomic Absorption Spectrometry	205
References	207
APPENDIX B GFAAS LITERATURE	209
B.1 Books	209
B.2 Periodicals	210
B.3 Reviews	210
B.4 Internet Resources	211
B.5 Applications of GFAAS	211
References	212
APPENDIX C CONDITIONS FOR GFAAS	215
APPENDIX D GLOSSARY	227
Index	241
