

CONTENTS

CHAPTER 1. THE MICHELSON INTERFEROMETER	1
I. Introduction	1
II. Monochromatic Light Sources	2
III. Polychromatic Sources	6
IV. Finite Resolution	9
V. Apodization	15
VI. Phase Errors	25
VII. Effect of Beam Divergence through the Interferometer	33
VIII. Effect of Mirror Misalignment	39
IX. Effect of a Poor Mirror Drive	41
X. Slow-Scan and Rapid-Scan Interferometers	43
a. Slow-Scanning Interferometers	43
b. Stepped-Scan Interferometers	45
c. Rapid-Scanning Interferometers	46
XI. Phase Modulation	48
References	55
CHAPTER 2. SAMPLING THE INTERFEROGRAM	56
I. Sampling Frequency	56
II. Dynamic Range	65
References	80
CHAPTER 3. COMPUTING TECHNIQUES	81
I. The Conventional Fourier Transform	81
a. Elementary Concepts	81
b. Mathematical Basis	82
II. The Fast Fourier Transform	85
III. Phase Correction	93
IV. Interferogram Domain Processing	97
a. Smoothing	98
b. Interpolation by Zero Filling	98
c. Derivative Spectrometry	101
d. Fourier Self-Deconvolution	102

V.	Real-Time Fourier Transforms	106
VI.	Fourier Transforms: A Pictorial Essay	108
	a. Mertz Method	109
	b. Forman Method	115
	References	119

CHAPTER 4. TWO-BEAM INTERFEROMETERS 121

I.	Drive Systems and Designs for Common Interferometers	121
	a. Introduction	121
	b. Medium-Resolution Far-Infrared Interferometers	121
	c. Medium-Resolution Mid-Infrared Interferometers	122
	d. Tilt Compensation	142
II.	Beamsplitters for Michelson Interferometers	147
III.	Less Common Types of Interferometers for Fourier Spectrometry	158
	a. Lamellar Grating Interferometers	158
	b. Polarizing Interferometers for Far-Infrared Spectrometry	161
	c. Special-Purpose Interferometers	163
	References	163

CHAPTER 5. AUXILIARY OPTICS FOR FT-IR SPECTROMETRY 166

I.	Spectrometer Design	166
	a. Introduction	166
	b. Slow-Scanning Far-Infrared Fourier Spectrometers	167
	c. Single-Beam Rapid-Scanning FT-IR Spectrometers	168
	d. Double- or Multiple-Beam FT-IR Spectrometers	173
	e. Optical Throughput	177

- II. Cells and Accessories for Absorption Spectrometry 181
 - a. Cells 181
 - b. Beam Condensers and Microscopes 182
 - c. Long-Path Gas Cells 183
- III. Accessories for Reflection Measurements 187
 - a. Specular Reflection Spectrometry 187
 - b. Reflection-Absorption Spectrometry 188
 - c. Attenuated Total Reflectance Spectrometry 191
 - d. Diffuse Reflectance Spectrometry 194
- IV. Infrared Emission Spectrometry 202
 - a. Laboratory Measurements 202
 - b. Measurements of Remote Sources 205
- V. Sources for Fourier Spectrometry 208
- VI. Infrared Detectors 209
 - a. Thermal Detectors 209
 - b. Quantum Detectors 213
 - c. Liquid-Helium-Cooled Detectors 216
- References 217

CHAPTER 6. DATA SYSTEMS

220

- I. Historical Perspectives 220
- II. Minicomputer Data Systems 223
 - a. Scope and Capabilities 223
 - b. Hardware 226
 - c. Software 230
- III. Microcomputers 238
- IV. Real-Time Data Systems and Array Processors 242
- References 246

CHAPTER 7. SIGNAL-TO-NOISE RATIO	248
I. Detector Noise	248
II. "Trading Rules" in FT-IR Spectrometry	254
a. Effect of Measurement Time	254
b. Effect of Resolution and Throughput	255
c. Effect of Apodization Function	258
d. Effect of Changing Mirror Velocity	259
III. Other Sources of Noise	261
a. Digitization Noise	261
b. Sampling Noise	262
c. Vibrations and Microphonics	267
d. Folding	268
e. Fluctuation Noise	269
f. Shot Noise	272
g. Sampling Errors	272
IV. Interferometers Versus Grating Spectrometers	274
a. Theoretical Calculations	274
b. Practical Comparison	279
c. Far-Infrared Spectrometry	281
References	283
CHAPTER 8. REDUCTION OF DYNAMIC RANGE IN FT-IR SPECTROMETRY	284
I. The Dynamic Range Problem	284
II. Polarization Modulation	286
a. Vibrational Circular Dichroism	286
b. Linear Dichroism Spectrometry	293
c. Sample Modulation Spectrometry	297
III. Optical Subtraction	298
References	310
CHAPTER 9. PHOTOTHERMAL FOURIER SPECTROMETRY	312
I. Photoacoustic Spectrometry of Gases	312

II.	Photothermal Infrared Spectrometry of Solids	315
a.	Microphone Detection	315
b.	Beam Deflection	316
III.	Unconventional Photothermal Measurement Techniques	320
IV.	Quantitative Considerations	323
V.	Comparison with Other Sampling Techniques	332
	References	335
CHAPTER 10.	QUANTITATIVE ANALYSIS	338
I.	Beer's Law	338
II.	Spectral Subtraction	340
a.	General Method	340
b.	Instrumental Effects	344
c.	Sample Effects	350
III.	Single-Component Analysis	353
IV.	Multicomponent Analysis	355
a.	Factor Analysis	356
b.	Least-Squares Methods	362
V.	Conclusions	367
	References	367
CHAPTER 11.	DISPERSIVE FOURIER TRANSFORM SPECTROMETRY	369
I.	Introduction	369
II.	Gases and Vapors	374
III.	Liquid Samples	376
IV.	Solid Samples	381
	References	384
CHAPTER 12.	FT-IR SPECTROMETRY OF TIME-DEPENDENT PHENOMENA	386
I.	Introduction	386
II.	Spectrometry for Dynamic Systems	387
III.	Transient Species in a Steady State	388
IV.	Slowly Varying Systems	390
V.	Rapidly Varying Systems	398
VI.	Time-Resolved Spectrometry	407
	References	423

CHAPTER 13. FT-IR STUDIES OF POLYMERS	426
I. Introduction	426
II. Subtraction Studies	433
III. Polarization Studies	437
IV. Time-Resolved Studies	450
V. Conclusions	455
References	455
CHAPTER 14. BIOCHEMICAL AND BIOMEDICAL APPLICATIONS	457
I. Introduction	457
II. Thermotropic Behavior of Lipids and Biomembranes	463
III. Kinetic and Mechanistic Studies of Enzyme Reactions	471
IV. Adsorption of Proteins from Blood	477
V. Other Work	484
References	485
CHAPTER 15. LOW-TEMPERATURE STUDIES	487
I. Low-Temperature Spectrometers	487
II. Matrix Isolation	499
III. Semiconductor Measurements	513
References	518
CHAPTER 16. ATOMIC EMISSION SPECTROMETRY	520
I. Instrumental Considerations	520
II. Sampling Frequency and Aliasing	527
III. Noise in Atomic Spectrometry	531
IV. Summary and Prognostication	533
References	534
CHAPTER 17. SURFACE ANALYSIS	536
I. Introduction	536
II. Absorption Spectrometry	536
III. Diffuse Reflectance Spectrometry	544
IV. Photothermal Spectrometry	546
V. Reflection-Absorption Spectrometry	549
VI. Attenuated Total Reflectance	553

VII. Emission Spectrometry	557
VIII. Detection Spectrometry	560
IX. Summary	562
References	562

CHAPTER 18. GC/FT-IR SPECTROMETRY **564**

I. Introduction	564
II. Hardware	569
a. Sampling	569
b. Light Pipe	575
c. Transfer Lines	579
d. Optics	583
e. Detectors	591
f. Gas Chromatographs	592
g. Dual-Beam GC/FT-IR	593
h. GC/FT-IR/MS Systems	598
III. Software	600
a. Data Collection	600
b. Gas Chromatogram Construction	602
c. GC/FT-IR Search Systems	607
IV. Conclusions	608
References	609

CHAPTER 19. THE HPLC/FT-IR INTERFACE **611**

I. Flow Cell Techniques	611
a. Gel Permeation Chromatography	618
b. Normal-Phase HPLC	618
c. Reverse-Phase HPLC	623
II. Solvent Elimination Techniques	623
a. Normal-Phase HPLC	623
b. Reverse-Phase HPLC	627
III. Microbore HPLC/FT-IR	632
a. Flow Cells	632
b. Solvent Elimination Techniques	634
IV. Supercritical Fluid Chromatography	637
V. Conclusions	646
References	646
