

CONTENTS

Preface	ix
1. Selective excitation of probe ion luminescence (SEPIL)	1
2. Applications of tunable-diode-laser IR spectroscopy to chemical analysis	12
3. Two-photon-excited molecular fluorescence	24
4. Laser-excited luminescence spectrometry	50
5. Laser fluorimetry : detection of aflatoxin B ₁ in contaminated corn	80
6. Laser-enhanced ionization for trace metal analysis in flames	91
7. The study of biological surfaces by laser electrophoretic light scattering	102
8. New laser-based methods for the measurement of transient chemical events	118
9. Laser applications in photoelectrochemistry	126
10. Coherent anti-stokes raman scattering spectroscopy	171
11. Spectroscopy by inverse raman scattering	193
12. Time-resolved resonance raman spectroscopy (TR ³) and related vidicon raman spectrography : vibrational spectra in nanoseconde	215
Index	239
