

CONTENTS

1. Introduction	1
PHASE CHANGES AND SEPARATIONS	
2. Analytical Uses of Phase Changes	5
3. Extraction	28
4. Chromatography	41
5. Liquid Column Chromatography	54
6. Plane Chromatography	76
7. Gas Chromatography	85
ELECTROMAGNETIC RADIATION	
8. Electromagnetic Radiation and its Interaction with Matter	115
9. Quantitative Analysis by Absorption of Electromagnetic Radiation	133
10. Instrumentation for Spectrometry	147
11. Infrared Spectroscopy	165
12. Ultraviolet Spectroscopy	226
13. Flame Emission and Atomic Absorption Spectroscopy	243
14. X-ray Methods	267
15. Nuclear Magnetic Resonance Spectroscopy	279
MASS SPECTROMETRY	
16. Mass Spectrometry of Organic Compounds	316
17. Spark Source Mass Spectrometry	353
ELECTROANALYTICAL CHEMISTRY	
18. Electrochemical Cells and Potentiometry	361
19. Some Other Electrochemical Techniques	400
ACIDS, BASES AND THEIR SALTS AND COMPLEXES	
20. Monoprotic Systems	413
21. Polyprotic Systems	438
22. Metal Ion Complexes	454
RADIOCHEMISTRY	
23. Radiochemical Methods	466

EVALUATION AND PROCESSING OF ANALYTICAL DATA

24. Statistical Treatment of Data	485
25. Data Processing	494

AUTOMATIC AND PROCESS ANALYZERS

26. Automatic Analyzers	519
27. Process Analyzers	531
28. Process Control	547

Index	564
