

CONTENTS

Series Editor's Preface	xv
Preface	xvii
Chapter 1. Current status of ICP-MS	1
1.1 Introduction	1
1.2 Description of the technique	3
1.3 Advantages	68
1.4 Limitations	74
1.5 Present capabilities	97
1.6 Extended capabilities with mixed-gas plasmas	137
Acknowledgement	170
References	170
Chapter 2. Flow injection techniques	213
2.1 Introduction	213
2.2 Principles	217
2.3 Limited dispersion systems ($D=1-3$)	238
2.4 Medium dispersion systems ($D=3-10$)	267
2.5 Large dispersion systems ($D>10$)	281
2.6 Reduced dispersion systems ($D<1$)	286
2.7 Features	321
Acknowledgement	322
References	322
Chapter 3. Electrothermal vaporization sample introduction for inductively coupled plasma-mass spectrometry	347
3.1 Introduction	347
3.2 Instrumentation	351
3.3 Analytical domain of ETV-ICP-MS	357
3.4 Principle of operation of ETV-ICP-MS	361
3.5 Background spectral features	367
3.6 Mechanism of vaporization of analyte	375
3.7 Chemical modification, physical carriers and mass transport efficiency	386
3.8 Non-spectroscopic interferences	408
3.9 Applications	413
3.10 Concluding remarks	428
References	428

Chapter 4.	Laser ablation for inductively coupled plasma-mass spectrometry	445
4.1	Laser ablation	445
4.2	Different types of laser ablation-based analysis	446
4.3	Specific use of LA-ICP-MS	447
4.4	Laser principles	449
4.5	Laser ablation systems	457
4.6	Signal acquisition and data processing	462
4.7	Sample preparation	463
4.8	Calibration	464
4.9	Elemental fractionation	466
4.10	Figures of merit	467
4.11	Applications	469
4.12	Spark and arc ablation	469
4.13	The future	470
	References	470
Chapter 5.	Direct sample insertion	503
5.1	Introduction	503
5.2	Instrumentation for DSIs	506
5.3	Effect of operating conditions on analyte signal behaviour	515
5.4	Mixed-gas DSI-ICP-AES	527
5.5	Chemical modification	532
5.6	Further extension of the analytical capability of the ICP using DSIs	539
5.7	analytical performance characteristics	544
5.8	Applications	553
5.9	Conclusions	553
	Acknowledgements	555
	References	555
