<i>Chapter 1. Quality control for pesticide residues analysis.</i> . . . . .	1
Alan R.C. Hill, James R. Startin, Richard J. Fussell	
1.1 Introduction . . . . .	1
1.2 Accreditation . . . . .	4
1.3 Sampling, transport, processing and storage of samples . . . . .	5
1.3.1 Sampling . . . . .	5
1.3.2 Laboratory sample transportation . . . . .	6
1.3.3 Sample preparation and processing prior to analysis . . . . .	7
1.4 Pesticide standards, calibration solutions and similar . . . . .	8
1.4.1 Identity and purity of standards . . . . .	8
1.4.2 Storage of reference standards . . . . .	9
1.4.3 Preparation, use and storage of stock and working standards . . . . .	9
1.5 Extraction and concentration . . . . .	12
1.5.1 Extraction conditions and efficiency . . . . .	12
1.5.2 Extract concentration and dilution to volume . . . . .	12
1.6 Contamination, interference, and natural sources of the analyte . . . . .	13
1.6.1 Contamination . . . . .	13
1.6.2 Interference. . . . .	14
1.6.3 Natural sources of the analyte . . . . .	15
1.7 Calibration and chromatographic integration. . . . .	15
1.7.1 Mass calibration of mass spectrometric detectors . . . . .	15
1.7.2 General requirements for quantitative calibration . . . . .	17
1.7.3 Matrix effects and matrix-matched calibration. . . . .	21
1.7.4 Effects of pesticide mixtures on calibration. . . . .	23
1.7.5 Calibration for pesticides that are mixtures of isomers or other components. . . . .	23

## Contents

1.7.6	Calibration using derivatives or degradation products . . . . .	24
1.7.7	Chromatographic data acquisition rate, noise and integration . . . . .	24
1.8	Analytical methods and analytical performance . . . . .	25
1.8.1	Acceptability of analytical methods. . . . .	25
1.8.2	Recovery for determination of acceptability of performance . . . . .	26
1.8.3	Proficiency testing and analysis of reference materials. . . . .	27
1.9	Confirmation of results . . . . .	28
1.9.1	Principles . . . . .	28
1.9.2	Confirmation by MS . . . . .	29
1.9.3	Confirmation by an independent laboratory . . . . .	31
1.10	Reporting of results . . . . .	31
1.10.1	Expression of results . . . . .	31
1.10.2	Calculation of results . . . . .	31
1.10.3	Rounding of data . . . . .	36
1.10.4	Quantifying the uncertainty of measurement . . . . .	36
	Acknowledgements . . . . .	37
	References . . . . .	37
	<i>Chapter 2. European Union legislation on pesticide residues . . . . .</i>	<i>39</i>
	Luis Martín Plaza	
2.1	Introduction and scope . . . . .	39
2.2	Overview on EU pesticides residues legislation. . . . .	40
2.3	Meaning of an MRL. . . . .	43
2.4	Setting of EU MRLs. . . . .	47
2.5	Import tolerances, extrapolation and level of determination. . . . .	62
2.6	Monitoring, reporting and control. . . . .	63
2.7	Rapid alert system in food and feed. . . . .	65
2.8	Activities in international fora . . . . .	73
2.8.1	The OECD . . . . .	73
2.8.2	The World Trade Organisation . . . . .	73
2.8.3	The Codex Alimentarius commission . . . . .	73
2.8.4	The ACP–EC Partnership Agreement . . . . .	73
2.9	Future trends . . . . .	74

<i>Chapter 3. Sample handling and clean-up procedures I.</i> . . . . .	75
Stewart L. Reynolds	
3.1 Introduction and scope . . . . .	75
3.2 Laboratory sample preparation . . . . .	75
3.2.1 Portion of the laboratory sample to be analysed . . . . .	75
3.3 Laboratory sample processing. . . . .	77
3.3.1 Homogeneity . . . . .	77
3.3.2 Analyte stability . . . . .	78
3.4 Extraction of pesticide residues with organic solvents . . . . .	79
3.4.1 Extraction techniques . . . . .	79
3.4.2 Properties of organic solvents . . . . .	80
3.4.3 Basic safety with solvent usage. . . . .	81
3.4.4 Solvents used as extractants in multi-residue methods. . . . .	81
3.5 Historical development of multi-residue methods based on the use of acetonitrile, acetone and ethyl acetate as extraction solvents . . . . .	82
3.5.1 Acetonitrile . . . . .	82
3.5.2 Acetone . . . . .	83
3.5.3 Ethyl Acetate . . . . .	85
3.6 Factors affecting extraction efficiency. . . . .	86
3.6.1 pH . . . . .	86
3.6.2 The use of salts for drying solvent extracts. . . . .	89
3.6.3 The use of salts in liquid-liquid partition . . . . .	89
3.7 Clean-up techniques . . . . .	90
3.7.1 Gel permeation chromatography . . . . .	90
3.7.2 High-performance gel permeation chromatography . . . . .	93
3.8 Comparisons of MRMs for extraction efficiency . . . . .	93
3.8.1 Inter-comparison study of the relative extraction efficiencies of acetone and EtAc. . . . .	95
3.9 Overall conclusions . . . . .	105
References . . . . .	106
 <i>Chapter 4. Sample handling and clean-up procedures II—new developments.</i> . . . . .	 113
Michelangelo Anastassiades, Ellen Scherbaum	
4.1 Introduction. . . . .	113

4.2	Sample processing and homogenisation . . . . .	115
4.3	Recent advancements in traditional MRMs . . . . .	117
4.4	Extraction and partitioning assisted by solid support materials . . . . .	124
4.4.1	Introduction . . . . .	124
4.4.2	Dispersion of samples on macroporous normal-phase adsorbents . . . . .	124
4.4.3	Dispersion of extracts on support materials . . . . .	125
4.4.4	Matrix solid phase dispersion (MSPD) . . . . .	129
4.5	Pressurised liquid extraction (PLE) . . . . .	131
4.5.1	Introduction . . . . .	131
4.5.2	Analytical procedure and critical parameters . . . . .	131
4.5.3	Published applications . . . . .	135
4.5.4	Discussion and future perspectives . . . . .	138
4.6	Hot water extraction . . . . .	138
4.7	Supercritical fluid extraction (SFE) . . . . .	141
4.7.1	Introduction . . . . .	141
4.7.2	Instrumentation and analytical procedure . . . . .	141
4.7.3	Critical analytical parameters . . . . .	143
4.7.4	Applications . . . . .	148
4.7.5	Discussion and future perspectives . . . . .	154
4.8	Other energy-assisted extraction techniques . . . . .	155
4.8.1	Microwave-assisted extraction (MAE/FMAE) . . . . .	155
4.8.2	Sonication-assisted extraction . . . . .	160
4.9	Adsorptive extraction techniques . . . . .	161
4.9.1	Solid phase extraction (SPE) . . . . .	162
4.9.2	SPE with immunosorbents ISs . . . . .	190
4.9.3	SPE with molecular-imprinted polymers (MISPE) . . . . .	193
4.10	Micro-extraction techniques involving liquid–liquid partitioning . . . . .	198
4.10.1	Solid-phase micro-extraction (SPME) . . . . .	199
4.10.2	Stir bar sorptive extraction (SBSE) . . . . .	208
4.10.3	Other microextraction techniques . . . . .	210
4.10.4	Membrane-assisted micro-extractions . . . . .	212
4.11	Strategies for the introduction of new analytical approaches . . . . .	214
4.11.1	Interdependence of analytical steps . . . . .	216
4.11.2	Trend for more analytical efficiency . . . . .	219
	References . . . . .	222

<i>Chapter 5. Sample introduction techniques . . . . .</i>	235
Sílvia Lacorte, Amadeo R. Fernández-Alba	
5.1 Introduction . . . . .	235
5.2 Outline of the analytical approach . . . . .	235
5.3 Injection techniques for gas chromatography . . . . .	237
5.3.1 Split/splitless injection . . . . .	237
5.3.2 On-column injection . . . . .	244
5.3.3 Programmable temperature vaporiser . . . . .	245
5.3.4 On-line LC–GC (solid-phase extraction and gel-permeation chromatography) . . . . .	249
5.3.5 Solid-phase micro-extraction . . . . .	251
5.4 Injection techniques for high performance liquid chromatography . . . . .	255
5.4.1 Loop injection. . . . .	255
5.4.2 Capillary electrophoresis coupled to LC . . . . .	259
5.4.3 SPME coupled to HPLC . . . . .	261
5.4.4 On-line solid-phase extraction coupled to LC. . . . .	261
5.5 Conclusions . . . . .	264
Acknowledgements . . . . .	264
References . . . . .	265
 <i>Chapter 6. GC–MS. I: Basic principles and technical aspects of GC–MS for pesticide residue analysis . . . . .</i>	 269
Hans-Jürgen Stan	
6.1 Introduction and scope . . . . .	269
6.2 The mass spectrum . . . . .	269
6.3 Structural information . . . . .	271
6.3.1 The molecular ion . . . . .	272
6.3.2 Isotopic peaks. . . . .	272
6.3.3 Fragmentation reactions . . . . .	273
6.3.4 Interpretation . . . . .	276
6.4 Chemical ionisation . . . . .	279
6.4.1 Positive ions . . . . .	280
6.4.2 Negative ions . . . . .	281
6.5 Complementary information . . . . .	282
6.6 High-resolution mass spectrometry (HRMS) . . . . .	286
6.7 Tandem mass spectrometry (MS/MS) . . . . .	287
6.8 Multi-residue screening for pesticides applying GC–MS . . . . .	291
6.8.1 Introduction to multi-residue screening for pesticides with GC–MS. . . . .	291

## Contents

6.8.2	The GC–MS instrument . . . . .	292
6.8.3	The mass spectrometer . . . . .	293
6.9	Compound identification . . . . .	299
6.9.1	Mass spectral libraries . . . . .	299
6.9.2	Background ions . . . . .	300
6.9.3	Background subtraction . . . . .	300
6.9.4	Library search . . . . .	301
6.9.5	Manual verification: use of RIC with background subtraction. . . . .	302
6.9.6	Screening for pesticides with full scan . . . . .	304
6.9.7	AMDIS from NIST . . . . .	306
6.9.8	Confirmation and quantitative determination with SIM . . . . .	308
6.9.9	Target compound analysis with SIM . . . . .	309
6.10	Automated screening applying full-scan acquisition . . . . .	313
6.10.1	Automated evaluation of full-scan acquisition data applying <i>AuPest</i> . . . . .	314
6.10.2	Retention time locking (RTL). . . . .	319
6.11	Analysis of pesticides with GC–MS/MS. . . . .	320
6.12	Pesticide residue analysis based on CI in negative and positive mode . . . . .	322
6.13	GC–TOF-MS . . . . .	328
6.14	New approaches in GC–MS. . . . .	333
6.14.1	Resistively heated GC–MS. . . . .	333
6.14.2	Comprehensive two-dimensional gas chromatography with TOF-MS. . . . .	334
6.14.3	Fast supersonic GC–MS . . . . .	334
References . . . . .		335

### Chapter 7. GC–MS. II: Applications for pesticide analysis in food . . . . . 339

Ana Agüera, Andre de Kok

7.1	Introduction and scope . . . . .	339
7.2	Quadrupole versus ion trap . . . . .	341
7.3	Pesticide identification . . . . .	342
7.3.1	Selected ion monitoring (SIM) . . . . .	344
7.3.2	Positive and negative chemical ionisation . . . . .	349
7.3.3	Tandem mass spectrometry. . . . .	352
7.4	Pesticide quantification . . . . .	358
7.5	New trends in GC–MS pesticide residue analysis . . . . .	363
References . . . . .		365

<i>Chapter 8. LC–MS. I: Basic principles and technical aspects of LC–MS for pesticide analysis.</i>	369
E. Michael Thurman, Imma Ferrer, Amadeo Fernández-Alba	
8.1 Introduction and scope	369
8.2 Ionisation in LC–MS	371
8.3 The mass spectrum	372
8.4 Structural information	374
8.4.1 The protonated or deprotonated molecule (molecular ion)	374
8.4.2 Isotopic peaks.	375
8.4.3 Fragmentation reactions	376
8.4.4 Interpretation	376
8.5 Atmospheric pressure ionisation, positive and negative ion.	378
8.5.1 Positive ions	378
8.5.2 Negative ions	378
8.5.3 Complementary information	379
8.6 LC–MS quadrupole instruments	380
8.7 High resolution MS	380
8.7.1 LC–MS TOF	380
8.7.2 Q-TOF/MS	383
8.8 Tandem mass spectrometry (MS/MS)	384
8.8.1 Triple quadrupole MS/MS	386
8.8.2 Quadrupole ion-trap MS/MS	389
8.9 Comparison of MS/MS instruments.	391
8.10 Operational factors that affect LC–API–MS response and fragmentation.	392
8.10.1 Source selection.	392
8.10.2 Eluent composition	394
8.11 Compound identification	396
8.11.1 Target screening	396
8.11.2 Non-target screening, identification of spectra and libraries, and the future in LC/MS spectra of pesticides in food.	398
References	400
 <i>Chapter 9. LC–MS. II: Applications for pesticide food analysis.</i>	 403
Imma Ferrer, Joaquin Abián, Amadeo R. Fernández-Alba	
9.1 Introduction and scope	403

## Contents

9.2	Electrospray and atmospheric pressure chemical ionisation (LC-API-MS) interfaces . . . . .	409
9.3	Interface robustness. . . . .	410
9.4	Identification and confirmation . . . . .	412
9.5	Fragment generation in target and non-target analysis . . . . .	412
9.6	Matrix effects . . . . .	418
9.7	Quantitation . . . . .	423
9.7.1	Sensitivity and reproducibility . . . . .	423
9.7.2	Calibration and robustness. . . . .	424
9.7.3	Matrix effects. . . . .	425
9.8	Future trends in LC-MS pesticide residue analysis . . . . .	433
	References . . . . .	434
	<i>Chapter 10. Proficiency tests in pesticide residue analysis . . . . .</i>	<i>439</i>
	Christoph von Holst, Lutz Alder	
10.1	Introduction . . . . .	439
10.2	Guidelines for proficiency tests . . . . .	441
10.3	Required characteristics of the test material . . . . .	442
10.4	The protocol for the proficiency test. . . . .	446
10.5	The z-score . . . . .	447
10.6	Statistical treatment of data . . . . .	450
10.6.1	Conventional approach for data analysis. . . . .	451
10.6.2	Robust statistics for data analysis . . . . .	452
10.6.3	Robust statistics according to the SLMP . . . . .	453
10.6.4	Robust statistics according to the Qn/median method . . . . .	455
10.6.5	Limitations of conventional statistics regarding the detection of outliers. . . . .	456
10.7	The results from PT 3. . . . .	457
10.8	Using summed squared scores for data evaluation . . . . .	459
10.9	An alternative approach based on the factor concept . . . . .	463
10.10	Conclusions . . . . .	467
	References . . . . .	468
	Glossary . . . . .	469
	List of Abbreviations . . . . .	471
