Preface	xxi
<i>Chapter 1. Biosensors based on self-assembled monolayers</i>	1
Daniela D. Schlereth	
1.1 Introduction	1
1.2 Self-assembly of organic monomolecular layers on solid supports	2
1.2.1 Self-assembled monolayers of organosulfur compounds on gold surfaces	3
1.2.2 Protein-resistant surfaces based on alkylthiol SAMs	4
1.2.3 Surface architectures prepared by solid-phase derivatization of alkylthiol SAMs	6
1.3 Affinity biosensors	12
1.3.1 Site-specific affinity binding of proteins to self-assembled molecular architectures	13
1.3.2 DNA hybridization biosensors	16
1.3.3 Electrochemical detection of affinity interactions	19
1.4 Amperometric catalytic biosensors	24
1.4.1 Multipoint attachment of proteins to gold electrode surfaces modified with an alkylthiol SAM	25
1.4.2 Site-specific affinity binding of proteins to gold electrode surfaces modified with an alkylthiol SAM	32
1.4.3 Amperometric biosensors based on self-assembled multilayered structures	46
1.5 Switchable self-assembled monolayers	48
1.6 Outlook	52
References	53

<i>Chapter 2. Third generation biosensors—integrating recognition and transduction in electrochemical sensors</i>	65
Ulla Wollenberger	
2.1 Introduction	65
2.2 Biosensor generations	66
2.3 Electron transfer processes at electrodes	67
2.4 Direct electron transfer—overview	68
2.5 Heme proteins/heme enzymes	77
2.5.1 Heme proteins	77
2.5.2 Heme enzymes	84
2.5.3 Copper proteins/enzymes	98
2.5.4 Other enzymes	100
2.6 Selected sensors	103
2.6.1 Superoxide sensor	103
2.6.2 Nitric oxide sensor	108
2.6.3 Peroxide sensors	110
2.6.4 Immunoassays based on DET indication	117
2.7 Conclusion	118
Acknowledgements	119
References	119
 <i>Chapter 3. Enzyme biosensors containing polymeric electron transfer systems</i>	 131
Hiroko I. Karan	
3.1 Introduction	131
3.2 Glucose biosensors	133
3.2.1 First approach: oxygen consumption detection	133
3.2.2 Second approach: hydrogen peroxide concentration detection	134
3.2.3 Third approach: use of non-physiological redox couple	134
3.2.4 Electron-transfer relay systems: binding electron transfer relays to enzyme proteins	135
3.2.5 Electrical wiring of redox enzymes with redox polymers	136
3.2.6 Flexible polymeric electron transfer mediators	137
3.3 Development of enzyme biosensors containing polymeric electron relay systems	139
3.3.1 Membranes	139

Contents

3.3.2	Poly[(vinylpyridine)Os(bipyridine) ₂ Cl ^{2+/3+}] derivative based redox hydrogels (A)	140
3.3.3	Amperometric enzyme biosensors using poly[(vinylpyridine)Os(bipyridine) ₂ Cl ^{2+/3+}] based hydrogels (A)	141
3.3.4	Mediator containing flexible polymeric electron transfer systems	145
3.3.5	Covalent electropolymerization of glucose oxidase in polypyrrole	157
3.3.6	Enzyme biosensors using NAD ⁺ /NADH dependent and other dehydrogenases	159
3.4	Summary	161
	Acknowledgements	171
	References	171
	Glossary	177
 <i>Chapter 4. DNA-based biosensors</i>		 179
A.M. Oliveira Brett		
4.1	Introduction	179
4.2	DNA-optical biosensors	182
4.3	DNA-acoustic wave biosensors	186
4.4	DNA-electrochemical biosensors	189
4.5	Conclusions	202
	Acknowledgements	203
	References	203
 <i>Chapter 5. Optical biosensors</i>		 209
Laura M. Lechuga		
5.1	Introduction to optical biosensors	209
5.2	Optical sensing principles	211
5.2.1	Evanescence wave principle	212
5.3	Types of optical biosensors	214
5.3.1	Optical fiber (FO) biosensors	216
5.3.2	Surface plasmon resonance (SPR) sensors	219
5.3.3	Integrated optical (IO) sensors	226
5.3.4	Other optical biosensing schemes	235
5.4	Biochemical aspects of optical biosensors	237
5.5	Applications of optical biosensors	241
5.5.1	Life sciences applications	242
5.5.2	Environmental applications	242

Contents

5.5.3	Chemical and biological warfare	243
5.5.4	Genetic applications	243
5.6	Future trends	243
5.6.1	Integration	244
5.6.2	New receptors and new immobilization procedures	245
5.6.3	Mutianalyte detection	246
5.6.4	Optical nanobiosensors	246
	Acknowledgements	247
	References	247
 <i>Chapter 6. Bioanalytical microsystems: technology and applications</i>		
<i>251</i>		
<i>Antje J. Baeumner</i>		
6.1	Introduction	251
6.2	Miniaturization techniques	253
6.2.1	Biosensor fluid flow system (biosensor housing)	253
6.2.2	Biosensor transducers	263
6.3	Immobilization of biorecognition elements in microbiosensors	266
6.4	Miniaturization and its effect on biosensor performance . .	267
6.5	Biosensor examples	269
6.6	Conclusions and future outlook	274
	References	276
 <i>Chapter 7. New materials for biosensors, biochips and molecular bioelectronics</i>		
<i>285</i>		
<i>Daniel Andreescu, Silvana Andreescu and Omowunmi A. Sadik</i>		
7.1	Introduction	285
7.2	Properties of ideal materials for biosensors and bioelectronics	287
7.3	Functionalization of electrode materials	287
7.3.1	Self-assembled monolayers	288
7.3.2	Biomaterials developed by covalent binding	290
7.4	Classes of materials for biosensors	292
7.4.1	Polymers	293
7.4.2	Biosensing materials containing metal complexes	298
7.4.3	Sol–gel materials	299

Contents

	7.4.4 Nanomaterials	300
	7.4.5 Nanoscaled interdigitated electrodes	308
	7.4.6 Composite materials	308
	7.4.7 Metal oxide semiconductor field effect transistors	312
	7.4.8 Photonic band gap	313
	7.4.9 Zeolites	314
7.5	Summary and future perspectives	315
7.6	Conclusions	318
	References	319
 <i>Chapter 8. Electrochemical antibody-based sensors</i>		 329
Judith Rishpon and Virginia Buchner		
8.1	Electrochemistry merges with immunology	329
8.2	Principles of conventional immunoassays	330
	8.2.1 Brief historical synopsis	330
	8.2.2 The antigen–antibody reaction	330
	8.2.3 The antibody (immunoglobulin) molecule	332
	8.2.4 Recombinant antibody technology	332
	8.2.5 Immunoassay techniques	333
	8.2.6 Enzyme immunoassays with and without separation	335
8.3	Principles of electrochemical analysis	336
	8.3.1 Electroanalytical measurements	336
	8.3.2 Screen-printed electrodes	336
	8.3.3 Transducers	336
	8.3.4 The recognition element	343
	8.3.5 Construction of an electroimmunosensor	343
8.4	Applications	351
	8.4.1 Overview	351
	8.4.2 Diagnostic, biomedical, and veterinary applications	352
	8.4.3 Environmental monitoring and food analysis	359
	8.4.4 Biological warfare agents	365
	8.4.5 Illegal drug screening	366
8.5	Conclusions	367
	References	368
 <i>Chapter 9. Immunoassay: potentials and limitations</i>		 375
Catalin Nistor and Jenny Emnéus		
9.1	Introduction	375

9.2	Basic aspects of immunoassay	376
9.2.1	Antibody–antigen interactions—basic concepts	376
9.2.2	Immunoassay sensitivity	378
9.2.3	The principle of antibody occupancy: classification of immunoassay	385
9.2.4	Immunoassay selectivity	391
9.3	Determinants of sensitivity and selectivity	396
9.3.1	Immunoreagent quality	397
9.3.2	Immunoreagent concentration	399
9.3.3	Incubation time and temperature	401
9.3.4	Other factors	405
9.4	Particular aspects of immunoassay standardization	415
9.4.1	Availability of standard materials	415
9.4.2	Immunoassay validation with emphasis on applications for environmental monitoring	416
9.5	Conclusions	419
	References	419
	Glossary	425

Chapter 10. Non-affinity sensing technology: the exploitation of biocatalytic events for environmental analysis 429

Elena Domínguez and Arántzazu Narváez

10.1	Introduction	429
10.2	Focus and scope	435
10.3	The upcoming phase in environmental analysis: from research to mandatory monitoring	436
10.4	Catalysis in living systems: from essential natural processes to sensing devices for environmental analysis	437
10.5	Biocatalytic processes for environmental sensing purposes	442
10.5.1	Complex catalytic pathways or catabolic approaches	442
10.5.2	Simple catalytic reaction: isolated enzymes	452
10.6	Emerging catalytic molecules for environmental applications	498
10.6.1	New biocatalysts from natural environments: extremozymes	499
10.6.2	Catalytic antibodies: abzymes	502
10.6.3	Redesign of catalytic activities	504

10.7	Concluding remarks	517
	Acknowledgements	517
	References	518
 <i>Chapter 11. Biosensors for bioprocess monitoring</i>		 539
	Ursula Bilitewski	
11.1	Introduction	539
11.2	Monitoring and control of substrate and product concentrations with enzyme electrodes	543
11.2.1	Enzyme electrodes for alcohols and saccharides	544
11.2.2	Stability of enzyme sensors	545
11.2.3	Specificity of enzyme sensors	546
11.2.4	Sampling devices	548
11.2.5	Control of substrate concentrations	549
11.3	Biosensor systems for the evaluation of product quality . .	550
11.4	Quantification of plasmid DNA	554
11.5	Enzyme-based systems for indicators of cell physiology and metabolic stress	556
11.5.1	Amino acid analysis	557
11.5.2	Nucleotide analysis	558
11.6	DNA arrays	560
11.6.1	Fundamentals	561
11.6.2	Gene expression analysis in biochemical engineering	568
11.7	Trends	569
	References	571
 <i>Chapter 12. Coupling of microdialysis sampling with biosensing detection modes</i>		 579
	Danila Moscone	
12.1	Introduction	579
12.2	The probe	580
12.3	The membrane	583
12.4	Sampling considerations	584
12.5	On-line coupling to biosensing devices	588
12.6	The issue of continuous glucose monitoring	590
12.6.1	In vivo glucose monitoring through microdialysis coupled to electrochemical biosensors	593

Contents

12.6.2	In vivo glucose monitoring through microdialysis coupled to other biosensing detection techniques	605
12.7	In vivo monitoring of other metabolites	606
12.7.1	Glutamate detection	606
12.7.2	Lactate detection	608
12.7.3	Acetylcholine detection	608
12.7.4	Uric acid and dopamine detection	609
12.7.5	Simultaneous determination of different metabolites	610
12.8	Dialysis electrodes	612
12.9	Biotechnological applications	615
12.10	Conclusion	618
	Acknowledgements	619
	References	619
