

## CONTENTS

<b>FOREWORD</b>	<b>ix</b>
<b>ACKNOWLEDGMENTS</b>	<b>xi</b>
<b>CUMULATIVE LISTING OF VOLUMES IN SERIES</b>	<b>xiii</b>
<b>CHAPTER 1 FUNDAMENTALS OF X-RAY FLUORESCENCE</b>	<b>1</b>
1.1. History and Relations of XRF and TXRF	1
1.2. Nature and Production of X-rays	5
1.2.1. The Line Spectrum	7
1.2.2. The Continuous Spectrum	13
1.3. Attenuation of X-rays	16
1.3.1. Photoelectric Absorption	18
1.3.2. X-ray Scatter	21
1.3.3. Total Attenuation	23
1.4. Deflection of X-rays	25
1.4.1. Reflection and Refraction	25
<b>1.4.2. Total External Reflection</b>	<b>29</b>
<i>1.4.2.1. Reflectivity</i>	<i>33</i>
<i>1.4.2.2. Penetration Depth</i>	<i>35</i>
References	<b>38</b>
<b>CHAPTER 2 PRINCIPLES OF TOTAL REFLECTION XRF</b>	<b>41</b>
2.1. Interference of X-rays	41
2.1.1. Double-Beam Interference	42
2.1.2. Multiple-Beam Interference	46
2.2. Standing Wave Fields	50
2.2.1. Standing Wave Fields in Front of a Thick Substrate	51
2.2.2. Standing Wave Fields Within a Thin Layer	56

2.2.3.	Standing Wave Fields Within a Multilayer or Crystal	61
2.3.	Intensity of Fluorescence Signals	63
2.3.1.	Infinitely Thick and Flat Substrates	63
2.3.2.	Granular Residues on a Substrate	65
2.3.3.	Buried Layers in a Substrate	67
2.3.4.	Reflecting Layers on Substrates	69
2.3.5.	Periodic Multilayers and Crystals	73
2.4.	Formalism for Intensity Calculations	74
2.4.1.	A Thick and Flat Substrate	75
2.4.2.	A Thin Homogeneous Layer on a Substrate	78
2.4.3.	A Stratified Medium of Several Layers	82
	References	85

### **CHAPTER 3 INSTRUMENTATION FOR TXRF 87**

3.1.	Basic Instrumental Setup	88
3.2.	The High-Power X-ray Source	91
3.2.1.	Fine-Focus X-ray Tubes	91
3.2.2.	Rotating Anode Tubes	93
3.3.	The Beam-Adapting Unit	94
3.3.1.	Low-Pass Filters	94
3.3.2.	Monochromators	100
3.4.	Sample Positioning	102
3.4.1.	Sample Carriers	102
3.4.2.	Fixed-Angle Adjustment	104
3.4.3.	Stepwise-Angle Variation	104
3.5.	Detection and Registration	106
3.5.1.	The Semiconductor Detector	107
3.5.2.	The Registration Unit	109
3.5.3.	Performance Characteristics	111
3.5.3.1.	<i>Detector Efficiency</i>	111
3.5.3.2.	<i>Spectral Resolution</i>	113
3.5.3.3.	<i>Input-Output Yield</i>	116
3.5.3.4.	<i>The Escape-Peak Phenomenon</i>	118
	References	120

<b>CHAPTER 4</b>	<b>PERFORMANCE OF TXRF ANALYSES</b>	<b>123</b>
4.1.	Preparations for Measurement	124
4.1.1.	Cleaning Procedures	125
4.1.2.	Preparation of Samples	127
4.1.3.	Presentation of a Specimen	131
4.2.	Recording and Interpretation of Spectra	135
4.2.1.	The Instrumental Setup	135
4.2.2.	Recording the Spectrograms	139
4.2.3.	Qualitative Analysis	140
	4.2.3.1. <i>Element Detection</i>	141
	4.2.3.2. <i>Fingerprint Analysis</i>	145
4.3.	Quantitative Micro- and Trace Analyses	145
4.3.1.	Prerequisites for Quantification	147
	4.3.1.1. <i>Determination of Net Intensities</i>	147
	4.3.1.2. <i>Determination of Relative Sensitivities</i>	148
4.3.2.	Quantification by Internal Standardization	151
	4.3.2.1. <i>Standard Addition for a Single Element</i>	152
	4.3.2.2. <i>Multielement Determinations</i>	154
4.3.3.	Conditions and Limitations	156
4.4.	Quantitative Surface and Thin-Layer Analyses	159
4.4.1.	Recording Angle-Dependent Intensity Profiles	159
4.4.2.	Distinguishing Between Types of Contamination	162
4.4.3.	Characterization of Thin Layers	166
	References	169
<b>CHAPTER 5</b>	<b>EFFICIENCY AND APPLICABILITY OF TXRF</b>	<b>173</b>
5.1.	Analytical Considerations	173
5.1.1.	General Costs of Installation and Upkeep	173
5.1.2.	Detection Power for Elements	175
5.1.3.	Reliability of Determinations	177
5.1.4.	The Great Variety of Suitable Samples	181
5.2.	Environmental Applications	183
5.2.1.	Water Samples	184
5.2.2.	Airborne Particulates	187
5.2.3.	Plant Materials	188

5.2.4.	Vegetable and Essential Oils	190
5.3.	Medical and Clinical Applications	191
5.3.1.	Blood and Serum	192
5.3.2.	Tissue Samples	193
5.4.	Industrial Applications	195
5.4.1.	Ultrapure Reagents	196
5.4.2.	High-Purity Silicon and Silica	196
5.4.3.	High-Purity Aluminum	198
5.4.4.	Wafer Material	200
5.4.4.1.	<i>Determination of Wafer Contamination by Direct TXRF</i>	201
5.4.4.2.	<i>Determination of Wafer Contamination by VPD-TXRF</i>	203
5.4.4.3.	<i>Thin-Layer Structures</i>	207
5.5.	Art-Historical and Forensic Applications	208
5.5.1.	Inorganic Pigments	209
5.5.2.	Textile Fibers	210
	References	211
<b>CHAPTER 6</b>	<b>EVALUATION AND PROSPECTS</b>	<b>215</b>
6.1.	Utility and Competitiveness of TXRF	215
6.1.1.	Advantages and Limitations	216
6.1.2.	Comparison Between TXRF and Competitors	218
6.2.	Trends and Future Prospects	224
6.2.1.	Instrumental Modifications	224
6.2.1.1.	<i>Detection of Light Elements</i>	224
6.2.1.2.	<i>Excitation by a Synchrotron</i>	226
6.2.2.	Ablation and Deposition Techniques	227
6.2.3.	Grazing Exit Arrangements	230
	References	233
