

CONTENTS OF VOLUME 2

INTRODUCTION TO THE SERIES	v
CONTRIBUTORS TO VOLUME 2	vii
CONTENTS OF OTHER VOLUMES	xiii

Monoarylazo and Bis(Arylazo) Derivatives of Chromotropic Acid as Photometric Reagents **I**

B. Buděšínský

I. Introduction	2
II. Synthesis of Monoarylazo and Bis(Arylazo) Derivatives of Chromotropic Acid	45
III. Determination of Individual Elements	53
IV. Remarks on the Present State of Research Concerning Arylazo Derivatives of Chromotropic Acid as Reagents	84
References	86

Electrometric Titrations with Two Polarizable Electrodes Involving Chelating Agents **93**

Karel Štulík and František Vydra

I. Principles of Biamperometric Titrations and Related Methods	94
II. Titrations with Two Polarizable Electrodes Involving EDTA and Related Compounds	103
III. Titrations with Two Polarizable Electrodes Involving Diverse Chelating Agents	113
References	113

Chelating Agents as Metal Precipitants: Advances, 1960-1965 **117**

F. H. Firsching

I. Introduction	118
II. Oxalate	118
III. 8-Quinolinol and Its Derivatives	120

IV. N-Phenylbenzohydroxamic Acid (N-Benzoyl-N-phenylhydroxylamine)	125
V. Oximes, Dioximes, and Hydroxamic Acids	127
VI. Carboxylic Acids	130
VII. 1,10-Phenanthroline, 2,2'-Bipyridine, and Related Compounds	133
VIII. Dyes	134
IX. Thiol and Thione-Based Compounds	135
X. Miscellaneous Compounds	136
XI. Use of Coprecipitants	140
XII. Discussion	140
References	142

Analytical Applications of Schiff Bases **149**

Ervin Jungreis and Samir Thabet

I. Introduction	149
II. Factors Influencing the Stability of Chelates	152
III. Application of Schiff Base Chelates in Qualitative Analysis	156
IV. Applications of Schiff Base Chelates in Quantitative Analysis	164
V. Selected Procedures in Analytical Chemistry Involving Schiff Bases	169
References	176

Selectivity and Analytical Application of Dimethylglyoxime and Related Dioximes **179**

Kálmán Burger

I. Analytical Selectivity of Dimethylglyoxime	179
II. Selectivity of Analytical Reactions Based on Complex Formation	193
III. Analytical Application of Dimethylglyoxime	198
IV. Diverse Dioximes as Analytical Reagents	206
References	209.

Chelates and Chelating Agents in the Analytical Chemistry of Niobium and Tantalum **213**

Erik Lassner and Richard Püschel

PART A. NIOBIUM AND TANTALUM IN AQUEOUS SOLUTION	215
I. General Properties of Niobium and Tantalum Solutions	215
II. Coordination Number	216
III. Alkaline Solutions	217
IV. Acidic Solutions	221

V. Stabilization of Solutions with Complexing Agents and the Formation of Ternary Complexes	226
VI. Recapitulation of the Behavior of Niobium and Tantalum in Aqueous Solution	229
VII. Reactions of Niobium and Tantalum in Concentrated Sulfuric Acid	231
PART B. GENERAL CHEMISTRY OF NIOBIUM AND TANTALUM CHELATES	232
PART C. CHELATION OF NIOBIUM	234
I. Niobium Chelates with Oxygen as the Only Donor Atoms	234
II. Niobium Chelates with Oxygen and Sulfur as the Donor Atoms	272
III. Niobium Chelates with Sulfur as the Only Donor Atoms	273
IV. Niobium Chelates with Oxygen and Nitrogen as the Donor Atoms	275
V. Niobium Chelates with Nitrogen as the Only Donor Atoms	294
PART D. CHELATION OF TANTALUM	295
I. Tantalum Chelates with Oxygen as the Only Donor Atoms	295
II. Tantalum Chelates with Sulfur as the Only Donor Atoms	324
III. Tantalum Chelates with Oxygen and Nitrogen as the Donor Atoms	324
IV. Tantalum Chelates with Nitrogen as the Only Donor Atoms	331
