

## TABLE OF CONTENTS

---

Preface	v
Chapter 1 Fundamental Problems in Trace Analysis	1
1.1 Introduction	1
1.2 Range of Concentrations in Trace Analysis	2
1.3 Separation and Preconcentration of Traces—General Considerations	3
1.4 Masking	5
References	6
Chapter 2 Working Techniques in Trace Analysis	9
2.1 General Principles of Trace Analysis	9
2.2 Materials to be Analysed	11
2.2.1 Inorganic Materials	11
2.2.2 Organic Materials	11
2.2.3 Other Materials	12
2.3 Sampling	12
2.3.1 Metals and Alloys	12
2.3.2 Geological Materials	15
2.3.3 Powdered Materials	15
2.3.4 Liquid Materials	15
2.3.5 Organic Materials	15
2.3.6 Other Materials	16
2.4 Contamination from the Atmosphere	16
2.4.1 Avoidance of Contamination	18
2.4.2 Laboratory Equipment	20
2.5 Comminution of Samples	21
2.6 Laboratory Vessels and Containers	22
2.6.1 Glass	24
2.6.2 Quartz	25
2.6.3 Platinum	25
2.6.4 Plastics	26
2.6.5 Cleaning	27
2.7 Reagents Used in Trace Analysis	30
2.7.1 Water	30
2.7.2 Important Reagents	31
2.7.3 Solutions	33
2.8 Volatilization of Substances	34
References	34

Chapter 3	Precipitation and Coprecipitation	37
3.1	General Considerations	37
3.2	Theory	37
3.2.1	Crystalline Precipitates	37
3.2.2	Colloidal Precipitates	38
3.2.3	Coprecipitation	39
3.3	Application of Precipitation and Coprecipitation to Trace Analysis	42
3.3.1	Separation of the Major Sample Constituent (Matrix) by Precipitation	42
3.3.2	Coprecipitation of Trace Elements with Inorganic Collectors	45
3.3.3	Coprecipitation of Traces with Organic Collectors	52
3.3.4	Electrodeposition in Trace Analysis	56
	References	59
Chapter 4	Volatilization of Substances	66
4.1	General Remarks	66
4.2	Direct Distillation of the Sample Matrix	69
4.3	Distillation of the Sample Matrix	70
4.4	Isolation of Trace Constituents	71
4.5	Ashing of Organic Matrices	76
4.5.1	Simple and Additive-Modified Dry Ashing	83
4.5.2	Wet Ashing (Wet Digestion)	85
4.5.3	Conclusion	91
	References	92
Chapter 5	Liquid-Liquid Extraction	97
5.1	Fundamental Physical Chemistry of Extraction	97
5.1.1	The Parameters Characteristic of Extraction	97
5.1.2	Inorganic Extraction Systems	102
5.1.3	Classification of Extraction Systems	103
5.2	Chelate Systems	104
5.2.1	Complex Compounds	104
5.2.2	Extraction as a Chemical Reaction	106
5.2.3	Factors Influencing the Value of the Distribution Coefficient	110
5.2.3.1	The Effect of the Metal Ion	110
5.2.3.2	The Effect of pH	112
5.2.3.3	The Effect of Reactions Occurring in the Aqueous Phase	115
5.2.3.4	The Effect of the Chelating Reagent	118
5.2.3.5	The Effect of Solvent	121
5.2.3.6	The Effect of Temperature	128
5.2.4	Extraction Kinetics	129
5.2.5	Synergism	135
5.2.6	Co-extraction	145
5.3	Ion-Association Extraction Systems	147
5.3.1	Fundamentals	147

5.3.2	Interactions Between Elements in the Extraction Process (Co-Extraction and Suppression of Extraction)	153
5.3.3	The Extraction of Co-ordinatively <b>Solvated</b> Salts	154
5.3.4	Extraction with High Molecular-Weight Amines	163
5.4	Applications of Extractions in Separation Processes	167
5.4.1	Extraction with $\beta$ - <b>Diketones</b>	183
5.4.1.1	<b>Acetylacetone</b> (AA)	183
5.4.1.2	Thenoyltrifluoroacetone ( <b>TTA</b> )	184
5.4.1.3	Dibenzoylmethane (DBM)	184
5.4.1.4	<b>1-Phenyl-3-methyl-4-benzoyl-5-pyrazolone</b> (PMBP)	193
5.4.2	Extraction with 8-Hydroxyquinoline and its Derivatives	193
5.4.2.1	8-Hydroxyquinoline ( <b>HOx</b> , oxine)	193
5.4.2.2	Derivatives of 8-Hydroxyquinoline	199
5.4.3	Extraction with Nitrosoarylhydroxylamines	202
5.4.3.1	<b>Cupferron</b>	202
5.4.4	Extraction with Hydroxamic Acids	202
5.4.4.1	<b>N-Benzoyl-N-Phenylhydroxylamine</b> (BPHA)	203
5.4.5	Extraction with Dithizone ( <b>H<sub>2</sub>Dz</b> )	203
5.4.6	Extraction with Dithiocarbamates	207
5.4.6.1	Sodium Diethyldithiocarbamate (Na-DDTC)	209
5.4.7	Extraction with Organophosphorus Compounds	210
5.4.7.1	Organophosphorus Acids	210
5.4.7.2	<b>Trialkyl</b> Phosphates and Phosphine Oxides	219
5.4.8	Extraction with High Molecular-Weight Amines	227
5.4.9	Extraction with Halides and Pseudohalides	227
	References	244
Chapter 6 Ion-Exchange Chromatography		<b>283</b>
6.1	Introduction	283
6.2	General Information on Ion-Exchangers	283
6.2.1	Organic Ion-Exchangers	284
6.2.1.1	Cation-Exchangers	284
6.2.1.2	Anion-Exchangers	302
6.2.1.3	Selective Ion-Exchange Resins	303
6.2.1.4	Amphoteric Ion-Exchangers	304
6.2.1.5	Oleophilic Ion-Exchangers	304
6.2.2	Inorganic Ion-Exchangers	304
6.2.2.1	Zeolites	304
6.2.2.2	Heteropoly-Acid Salts	305
6.2.2.3	Hydrous Oxides and Insoluble Salts	306
6.2.2.4	Other Inorganic Ion-Exchangers	307
6.2.3	Liquid Ion-Exchangers	307
6.2.4	Ion-Exchange Paper	307
6.3	Fundamental Characteristics of and Methods for Examination of <b>Ion-</b> Exchangers	307
6.3.1	General Information	307

6.3.2	Particle Size	308
6.3.3	Ion-Exchange Capacity and Polyfunctionality	308
6.3.4	Determination of $pK$	311
6.3.5	Mechanical and Chemical Stability	311
6.3.5.1	Thermal Stability	312
6.3.6	Swelling	314
6.3.7	Ion-Exchange Resin Density and Bed Density	315
6.3.8	Other Properties	315
6.4	Ion-Exchange Equilibrium	316
6.4.1	Fundamental Definitions	316
6.4.2	Selectivity	320
6.4.2.1	Ways of Expressing Selectivity	320
6.4.2.2	Sources of Selectivity	323
6.4.3	Ion-Exchange in Concentrated Electrolyte Solutions	345
6.4.3.1	Anomalous Sorption	348
6.4.4	Ion-Exchange in Very Dilute Solutions	348
6.4.5	Ion-Exchange in Non-aqueous and Mixed Solvents	349
6.4.6	Prediction of Selectivity from Independent Data	352
6.5	Ion-Exchange Kinetics	355
6.6	The Column Process	355
6.6.1	Classification of Chromatographic Development Techniques	357
6.6.2	Theory of Break-through <b>Curves</b>	360
6.6.2.1	<b>Effect</b> of Ion-Exchange Reaction Equilibrium	361
6.6.2.2	Effect of Dynamics of the Column Process	363
6.6.3	The Elution Development Technique	364
6.6.3.1	Plate Theory	367
6.6.3.2	Rate Theory	370
6.6.4	Analysis of Chromatographic Separations	371
6.6.4.1	Resolution	371
6.6.4.2	Other Ways to Express the Quality of Separation	397
6.7	The Technique of Ion-Exchange Chromatography	399
6.7.1	Pretreatment of the Ion-Exchanger	399
6.7.2	Equipment	401
6.7.3	Effluent Analysis	405
6.7.4	The Elution Development Technique	407
6.7.4.1	Simple Elution	407
6.7.4.2	<b>Stepwise</b> Elution	408
6.7.4.3	Gradient Elution	409
6.8	Applications and Examples	412
6.8.1	Preconcentration of Trace Amounts of Elements	412
6.8.1.1	Selective Sorption of Traces	423
6.8.1.2	Selective Retention of the Matrix	428
6.8.2	Separation of Traces	430
6.8.2.1	Separation into Groups	431
6.8.2.2	Isolation of the Individual Components of a Mixture	436
6.8.3	Methods Utilizing Reversal of Elution Order	467
6.8.4	Qualitative Analysis	470
6.8.5	Quantitative Analysis	471
	References	473

## Table of contents

xi

<b>Chapter 7 Extraction Chromatography</b>	<b>503</b>
<b>7.1 General</b>	<b>503</b>
<b>7.2 Theory</b>	<b>505</b>
7.2.1 The Distribution-Reaction Equilibrium	505
7.2.2 The Column Separation Process	515
<b>7.3 Techniques in Extraction Chromatography</b>	<b>517</b>
<b>7.4 Applications</b>	<b>518</b>
<b>References</b>	<b>529</b>
<b>Index</b>	<b>535</b>
