Editor's Preface	xxi
Authors' Preface	xxiii
List of Abbreviations	xxvii

Part I. General

Chapter 1. Sampling	3
References	4
Chapter 2. Decomposition/dissolution techniques	5
2.1. Acid attack	5
2.1.1. Acids	5
2.1.2. Dissolution techniques	8
2.2. Fusion	10
2.2.1. Alkaline fusion	10
2.2.2. Acidic fusion	11
2.2.3. Reductive fusion (fire assay)	11
2.3. Decomposition in gas streams	13
2.3.1. Oxidation (dry ashing)	13
2.3.2. Decomposition with halogens	14
References	14
Chapter 3. Separation and preconcentration	17
3.1. Solvent extraction	18
3.1.1. Extractants and extraction solvents	18
3.1.2. Separation of traces	20
3.1.3. Separation of the matrix	22
3.1.4. Practical aspects	22
3.2. Precipitation and coprecipitation	24
3.2.1. Coprecipitation of traces	24
3.2.2. Precipitation of macrocomponents	26
3.3. Volatilization	27
3.3.1. Volatilization of trace elements	27

3.3.2. Volatilization of macrocomponents	29
3.4. Sorption	30
3.4.1. Sorption via physical interactions	30
3.4.2. Simple ion-exchange	31
3.4.3. Chelating sorbents	32
3.4.4. Practical aspects	33
3.5. Chromatographic techniques	33
3.5.1. Gas chromatography	34
3.5.2. Liquid chromatography	35
3.5.3. Supercritical fluid chromatography	38
3.6. Electrochemical methods	38
References	39
Chapter 4. Spectrometric determination techniques	45
4.1. Basic concepts	45
4.2. Sample and sample introduction	47
4.2.1. Gaseous samples	47
4.2.2. Liquids and solutions	48
4.2.3. Slurries	50
4.2.4. Solid samples	51
4.3. Spectrophotometry	53
4.3.1. Sample and colour systems	53
4.3.2. Instrumentation	54
4.3.3. Measurement and calibration	55
4.3.4. Analytical characteristics	56
4.4. Atomic absorption spectrometry (AAS)	57
4.4.1. General	57
4.4.2. Flame AAS	59
4.4.3. Graphite furnace AAS	62
4.4.4. Quartz furnace AAS	66
4.5. Atomic emission spectrometry	66
4.5.1. Sample and sample introduction	67
4.5.2. Flame AES	67
4.5.3. Inductively coupled plasma AES	68
4.5.4. Other atomic emission techniques	73
4.6. Fluorescence spectrometry	73
4.6.1. Molecular fluorescence spectrometry (spectrofluorimetry)	74
4.6.2. Atomic fluorescence spectrometry (AFS)	75
4.6.3. X-ray fluorescence spectrometry (XRF)	77
4.7. Activation spectrometry	82
4.7.1. Irradiation and measurement	82
4.7.2. Analytical characteristics	83
4.8. Mass spectrometry	85
4.8.1. Inductively coupled plasma mass spectrometry	85
4.8.2. Other MS techniques	91
References	

Chapter 5. Quantification techniques	105
5.1. Calibration graph	105
5.2. The method of standard additions	105
5.3. Internal standardization	106
5.4. Isotope dilution analysis	107
References	108
Chapter 6. Speciation analysis	109
6.1. Instrumental approaches	110
6.1.1. Gas chromatography–atomic absorption spectrometry	110
6.1.2. Gas chromatography–atomic emission spectrometry	111
6.1.3. Gas chromatography–mass spectrometry	111
6.1.4. Liquid chromatography–mass spectrometry	112
6.1.5. Supercritical fluid chromatography–mass spectrometry	112
6.2. Sample preparation for speciation analysis	113
References	114
Chapter 7. Flow-injection analysis	115
7.1. General purpose FI manifold	115
7.2. Liquid–liquid extraction	117
7.3. Liquid–gas extraction	117
7.4. Sorption	118
7.5. Precipitation	119
7.6. Microwave digestion	119
7.7. Speciation analysis	120
7.8. Calibration	121
References	121
Chapter 8. Quality assurance in trace analysis	123
8.1. Standard solutions	123
8.1.1. Aqueous standards	123
8.1.2. Non-aqueous standards	124
8.2. Contamination	124
8.3. Losses	126
8.4. Accuracy verification	127
References	128

PART II. Multielement Trace Analysis of Real Samples

Chapter 9. Environmental and geological materials	133
9.1. Air	133
9.1.1. Sampling and sample handling	134
9.1.2. Determination techniques	135
9.2. Water	136
9.2.1. Sampling and storage	138
9.2.2. Preconcentration	140
9.2.3. Determination techniques	143

9.3. Rocks, soils and sediments	151
9.3.1. Sampling and physical sample preparation	152
9.3.2. Sample decomposition	152
9.3.3. Determination techniques	156
9.4. Ashes, slags and solid wastes	165
9.5. Speciation	166
9.5.1. Water	166
9.5.2. Sediments and soils	169
9.6. Quality control and assurance	171
9.6.1. Contamination	171
9.6.2. Losses	172
9.6.3. Reference materials	172
References	174
<i>chapter 10. Biological and clinical materials</i>	187
10.1. General considerations	187
10.1.1. Sampling and storage	187
10.1.2. Direct analysis	188
10.1.3. Digestion	188
10.1.4. Separation and/or preconcentration	188
10.1.5. Determination	188
10.1.6. Microanalysis	189
10.2. Biomedical materials	189
10.2.1. Body fluids	190
10.2.2. Tissues	194
10.3. Ecological materials	196
10.3.1. Plant materials	196
10.3.2. Animal tissues	200
10.4. Foodstuffs	204
10.5. Speciation	207
10.6. Quality assurance	208
References	212
<i>Chapter 11. Inorganic industrial materials</i>	223
11.1. Metals and alloys	223
11.1.1. Ferrous metals and alloys	224
11.1.2. Non-ferrous metals and alloys	227
11.1.3. Refractory metals and alloys	232
11.1.4. Precious metals	235
11.2. Semiconducting materials and related products	237
11.2.1. Semiconducting materials	237
11.2.2. Electronic grade gases and chemicals	242
11.3. Analysis of ceramics and their basic products	242
11.3.1. General analytical approaches	242
11.3.2. Industrial ceramics	246
11.3.3. Catalysts	248

11.4. Nuclear materials	248
11.5. Quality control and assurance	252
References	253
Chapter 12. Organic industrial materials	261
12.1. Petroleum and petroleum products	261
12.1.1. Sample handling prior to measurement	261
12.1.2. Determination techniques	263
12.2. Energy-related solid materials	266
12.2.1. Sample handling prior to measurement	266
12.2.2. Determination techniques	267
12.3. Polymers	268
12.4. Speciation analysis of fossil fuels	269
12.5. Quality assurance	269
References	272
 Part III. Determination of Individual Elements	
Chapter 13. Aluminium	277
13.1. Separation and preconcentration	277
13.2. Determination techniques	278
13.3. Analysis of real samples	279
13.3.1. General considerations	281
13.3.2. Water, dialysis fluids and pharmaceutical samples	281
13.3.3. Biological samples	283
13.4. Speciation	285
References	288
Chapter 14. Antimony	293
14.1. Separation and preconcentration	293
14.2. Determination techniques	295
14.3. Analysis of real samples	297
References	299
Chapter 15. Arsenic	303
15.1. Separation and Preconcentration.	303
15.2. Determination techniques	306
15.3. Analysis of real samples	308
15.3.1. Environmental and geological materials	308
15.3.2. Biological samples	309
15.3.3. Industrial materials	315
15.4. Speciation	315
References	321
Chapter 16. Barium	329
16.1. Analytical techniques	329

16.2. Analysis of real samples	331
References	332
<i>Chapter 17. Beryllium</i>	333
17.1. Analytical techniques	333
17.2. Analysis of real samples	335
References	337
<i>Chapter 18. Bismuth</i>	339
18.1. Separation and preconcentration	339
18.2. Determination techniques	340
18.3. Analysis of real samples	341
References	342
<i>Chapter 19. Boron</i>	347
19.1. Separation and preconcentration	348
19.2. Determination techniques	349
19.3. Analysis of real samples	352
References	357
<i>Chapter 20. Cadmium</i>	361
20.1. Separation and preconcentration	361
20.2. Determination techniques	362
20.3. Analysis of real samples	363
20.4. Speciation	374
References	374
<i>Chapter 21. Caesium</i>	377
21.1. Separation and preconcentration	377
21.2. Determination techniques	378
21.3. Analysis of real samples	379
References	380
<i>Chapter 22. Calcium and magnesium</i>	383
22.1. Determination	383
References	385
<i>Chapter 23. Chromium</i>	387
23.1. Separation and preconcentration	387
23.2. Determination techniques	389
23.3. Speciation	391
23.4. Analysis of real samples	393
References	398
<i>Chapter 24. Cobalt</i>	405
24.1. Separation and preconcentration	405

24.2. Determination techniques	406
24.3. Analysis of real samples	408
References	411
Chapter 25. Copper	413
25.1. Separation and preconcentration	413
25.2. Determination techniques	414
25.3. Analysis of real samples	416
25.4 Speciation	419
References	422
Chapter 26. Gallium	427
26.1. Analytical techniques	427
26.2. Analysis of real samples	429
References	430
Chapter 27. Germanium	433
27.1. Separation and preconcentration	433
27.2. Determination techniques	434
27.3. Analysis of real samples	436
References	436
Chapter 28. Gold.	439
28.1. Separation and preconcentration	440
28.2. Determination techniques	441
28.3. Analysis of real samples	443
28.3.1. Geological materials	443
28.3.2. Other materials	447
28.3.3. Accuracy considerations	450
References	451
Chapter 29. Hafnium	455
29.1. Determination	455
References	457
Chapter 30. Indium	459
30.1. Separation and preconcentration	459
30.2. Determination techniques	460
30.3. Analysis of real samples	461
References	461
Chapter 31. Iridium	465
31.1. Separation and preconcentration	465
31.2. Determination techniques	466
31.3. Analysis of real samples	467
References	470

Chapter 32. Iron	473
32.1. Analytical techniques	473
32.2. Analysis of real samples	476
32.3. Speciation	476
References	476
Chapter 33. Lead	481
33.1. Separation and preconcentration	481
33.2. Determination techniques	483
33.3. Analysis of real samples	485
33.3.1. Environmental and geological materials	485
33.3.2. Biological materials	487
33.3.3. Industrial materials	488
33.4. Speciation of organolead compounds	489
33.4.1. Instrumental approaches	489
33.4.2. Analysis of real samples	490
References	493
Chapter 34. Lithium	501
34.1. Separation and preconcentration	501
34.2. Determination techniques	502
34.3. Analysis of real samples	504
References	505
Chapter 35. Manganese	509
35.1. Separation and preconcentration	509
35.2. Determination techniques	510
35.3. Analysis of real samples	511
References	514
Chapter 36. Mercury	517
36.1. Separation and preconcentration	517
36.1.1. Volatilization	518
36.1.2. Other methods	519
36.2. Determination techniques	519
36.3. Analysis of real samples for total mercury content	522
36.3.1. Environmental and geological materials	522
36.3.2. Biological materials	525
36.3.3. Industrial materials	526
36.4. Speciation	529
36.4.1. Analytical techniques	529
36.4.2. Speciation analysis of real samples	535
References	536
Chapter 37. Molybdenum	543
37.1. Separation and preconcentration	543

37.2. Determination techniques	544
37.3. Analysis of real samples	547
References	551
<i>Chapter 38. Nickel</i>	555
38.1. Separation and preconcentration	555
38.2. Determination techniques	556
38.3. Analysis of real samples	558
References	563
<i>Chapter 39. Niobium</i>	567
39.1. Separation and preconcentration	567
39.2. Determination techniques	568
39.3. Analysis of real samples	569
References	569
<i>Chapter 40. Osmium</i>	571
40.1. Separation	571
40.2. Determination techniques	572
40.3. Analysis of real samples	573
References	576
<i>Chapter 41. Palladium</i>	579
41.1. Separation and preconcentration	579
41.2. Determination techniques	580
41.3. Analysis of real samples	581
References	586
<i>Chapter 42. Platinum</i>	589
42.1. Separation and preconcentration	589
42.2. Determination techniques	590
42.3. Analysis of real samples	592
References	598
<i>Chapter 43. Rare earth elements</i>	601
43.1. Separation and preconcentration	602
43.2. Determination techniques	604
43.3. Analysis of real samples	611
References	617
<i>Chapter 44. Rhenium</i>	623
44.1. Analytical techniques	623
44.2. Analysis of real samples	625
References	627
<i>Chapter 45. Rhodium</i>	629
45.1. Separation and preconcentration	629
45.2. Determination techniques	630
45.3. Analysis of real samples	631
References	633

<i>Chapter 46. Rubidium</i>	635
46.1. Analytical techniques	635
46.2. Analysis of real samples	637
References	637
<i>Chapter 47. Ruthenium</i>	639
47.1. Separation and preconcentration	639
47.2. Determination techniques	640
47.3. Analysis of real samples	642
References	643
<i>Chapter 48. Scandium</i>	645
48.1. Separation and preconcentration	645
48.2. Determination techniques	646
48.3. Analysis of real samples	648
References	646
<i>Chapter 49. Selenium</i>	649
49.1. Separation and preconcentration	649
49.2. Determination techniques	651
49.3. Analysis of real samples	653
49.3.1. Environmental and geological materials	654
49.3.2. Biological materials	654
49.3.3. Industrial samples	661
49.4. Speciation	661
References	663
<i>Chapter 50. Silicon</i>	671
50.1. Analytical techniques	671
50.2. Analysis of real samples	673
References	674
<i>Chapter 51. Silver</i>	677
51.1. Separation and preconcentration	677
51.2. Determination techniques	678
51.3. Analysis of real samples	679
References	685
<i>Chapter 52. Sodium and potassium</i>	687
52.1. Analytical techniques	687
52.2. Analysis of real samples	688
References	689
<i>Chapter 53. Strontium</i>	691
53.1. Separation and preconcentration	691
53.2. Determination techniques	692

53.3. Analysis of real samples	693
References	693
Chapter 54. Tantalum	695
54.1. Separation and preconcentration	695
54.2. Determination	696
References	698
Chapter 55. Technetium	699
55.1. Separation and preconcentration	699
55.2. Determination techniques	700
55.3. Analysis of real samples	701
References	704
Chapter 56. Tellurium	707
56.1. Separation and preconcentration	707
56.2. Determination techniques	708
56.3. Analysis of real samples	709
References	711
Chapter 57. Thallium	713
57.1. Separation and preconcentration	713
57.2. Determination techniques	714
57.3. Analysis of real samples	716
References	718
Chapter 58. Thorium	721
58.1. Separation and preconcentration	721
58.2. Determination techniques	722
58.3. Analysis of real samples	724
References	727
Chapter 59. Tin	729
59.1. Separation and preconcentration	729
59.2. Determination techniques	730
59.3. Analysis of real samples	732
59.4. Speciation	736
59.4.1. Sample preparation	736
59.4.2. Instrumental techniques	737
59.4.3. Speciation analysis of real samples	738
References	742
Chapter 60. Titanium	747
60.1. Analytical techniques	747
60.2. Analysis of real samples	748
References	749

<i>Chapter 61. Transuranium elements</i>	751
61.1. Separation and preconcentration	751
61.2. Determination techniques	752
61.3. Analysis of environmental samples	753
References	757
<i>Chapter 62. Tungsten</i>	761
62.1. Analytical techniques	761
62.2. Analysis of real samples	763
References	763
<i>Chapter 63. Uranium</i>	765
63.1. Separation and preconcentration	765
63.2. Determination techniques	766
63.3. Analysis of real samples	768
References	773
<i>Chapter 64. Vanadium</i>	777
64.1. Separation and preconcentration	777
64.2. Determination techniques	778
64.3. Analysis of real samples	780
References	784
<i>Chapter 65. Zinc</i>	787
65.1. Analytical techniques	787
65.2. Analysis of real samples	789
References	791
<i>Chapter 66. Zirconium</i>	797
66.1. Separation and preconcentration	797
66.2. Determination techniques	798
66.3. Analysis of real samples	799
References	799
Index	803
