Chapter 1. Emerging technologies – the way forward on improving protein analysis

Gyorgy Marko-Varga

1.1 Introduction	
1.2 The Human Proteome Organization	
1.3 Pharmacogenomics	11
1.4 Protein Separation and Analysis	14
1.4.1 Introduction	14
1.4.2 Protein separation by 2D gels and liquid chromatography	17
1.4.3 Alternative approaches	21
1.4.4 Mass spectrometry identifications	23
1.5 Protein Annotation and Identification	28
1.6 Biomarkers	31
1.7 Pathway Proteomics	38
1.8 Protein Chip Array Developments	40
1.9 Systems Biology.	45
1.10 Laser Capture Microdissection and Tissue Imaging.	47
1.11 Tissue Imaging and Profiling.	50
1.12 Conclusions	52
References	57

Chapter 2. Capillary high-performance liquid chromatography for proteomic and peptidomic analysis

Christian G. Huber, Christian Schley, Nathanael Delmotte

2.1 Introduction	69
2.2 Chromatographic Separation Systems for Protein and Peptide Separations.	74

Contents

2.2.1	Reversed-phase and ion-pair reversed-phase HPLC	75
2.2.2	Ion-exchange chromatography	82
2.2.3	Affinity chromatography	85
2.2.4	Size-exclusion chromatography	90
2.3	Column Technology and Stationary Phases	91
2.3.1	Conventional capillary columns packed with microparticulate stationary phases	91
2.3.2	Capillary columns for ultrahigh-pressure liquid chromatography.	95
2.3.3	Monolithic capillary columns	98
2.4	Instrumentation for Micro- and Nanoscale Chromatography	106
2.4.1	Solvent delivery and gradient formation	108
2.4.2	Sample injection	113
2.4.3	Detection	115
2.4.4	Instrumentation for ultrahigh-pressure liquid chromatography.	119
2.5	Examples of Application	122
2.5.1	Multidimensional peptide separations	122
2.5.2	Utilization of retention time information for protein identification	131
2.5.3	Identification of tumor-associated peptides	133
2.5.4	Multidimensional analysis of intact proteins	134
2.6	Conclusions and Outlook.	140
	References	140

Chapter 3. Peptide and protein separations by capillary electrophoresis and electrochromatography

Ákos Végyári

3.1	Introduction	149
3.2	Instrumentation	151
3.2.1	Equipment.	151
3.2.2	Detection.	152
3.2.3	Coatings	154
3.3	Electromigration Properties of Peptides and Proteins	156
3.4	Sample Treatment	162
3.4.1	Preseparation and preconcentration.	162
3.4.2	Derivatization	166

Contents

3.5	Capillary Electrophoresis of Peptides and Proteins	169
3.5.1	Capillary zone electrophoresis	170
3.5.2	Non-aqueous capillary electrophoresis	178
3.5.3	Capillary gel and gel-free electrophoresis	178
3.5.4	Capillary isotachopheresis	182
3.5.5	Capillary isoelectric focusing	185
3.5.6	Micellar electrokinetic chromatography	191
3.5.7	Affinity capillary electrophoresis	195
3.6	Capillary Electrochromatography of Peptides and Proteins .	197
3.6.1	Open tubular capillary electrochromatography. .	198
3.6.2	Particulate capillary electrochromatography . . .	201
3.6.3	Pressure-assisted CEC (pseudo-CEC).	209
3.7	Analytical Platforms	211
3.7.1	Multidimensional separations	211
3.7.2	Miniaturization	215
3.8	Summary	217
	References	218

Chapter 4. Two-dimensional gel electrophoresis: the state of the art

Charlotte Bratt

4.1	Introduction	253
4.2	Improvements within the 2D-Page Technology	256
4.3	Sample Preparation.	257
4.4	Interfering Substances.	258
4.5	The 2D-Page	258
4.6	Visualisation of Proteins	259
4.7	Analysis of the 2D-Page	260
4.8	Limitations	262
4.8.1	Dynamic range	262
4.8.2	Membrane and hydrophobic proteins	263
4.8.3	Low-molecular-mass proteins	264
4.9	Applications of Proteomics.	264
4.10	The Proteomic Project.	265
4.11	Successful Studies in the Literature using 2D-Page.	267
4.12	Alternatives to 2D-Page.	269
4.13	Conclusion.	270
	Acknowledgements	270
	References	270

Contents

Chapter 5. Phosphorylation-specific analysis strategies for mass spectrometry: enhanced detection of phosphorylated proteins and peptides

Allan Stensballe, Richard J. Simpson

5.1	Introduction	275
5.1.1	Chemical properties and abundances of phosphoamino acids.	277
5.1.2	Toolbox for micro-characterization of phosphoproteins by mass spectrometry	278
5.2	Global Gel-Based Phosphoprotein Analysis	280
5.3	Neo-Classical Strategies for Phosphoprotein Analysis	284
5.4	Mass Spectrometry-Driven Phosphopeptide Mapping and Sequencing	287
5.4.1	Preparation of phosphoproteins for MS analysis.	288
5.4.2	Discrimination effects and hindered detection of phosphopeptide by mass spectrometry	290
5.4.3	Detection of phosphorylated peptides in peptide mass maps.	294
5.4.4	Phosphorylation-specific precursor ion discovery by MS	296
5.4.5	Phosphopeptide sequencing by mass spectrometry	301
5.4.6	Nanoscale chromatography for affinity enrichment and separation of phosphopeptide mixtures	306
5.5	Mass Spectrometry Driven Strategies for Phosphoproteomics	316
5.5.1	Selective purification of phosphoproteins by immunoprecipitation and affinity enrichment	316
5.5.2	Multidimensional protein identification technology (MudPIT) strategy for "shotgun" phosphoprotein identification.	318
5.5.3	Ion-exchange-based separation of complex mixtures in phosphoproteome studies	318
5.5.4	Affinity-based enrichment of phosphopeptides in phosphoproteome studies.	319
5.5.5	Chemical derivatization strategies in phosphoproteome studies.	320
5.6	Bioinformatics Tools for Phosphoprotein Characterization, Hypothesis-Driven Phosphoprotein Analysis and Data Mining	321

Contents

5.7	Quantitative Strategies for Phosphoproteome Analysis	322
5.8	Summary	326
	Acknowledgments.	327
	References	327

Chapter 6. Microtechnology principles and platforms for proteomic analysis

Thomas Laurell, Johan Nilsson, Gyorgy Marko-Varga

6.1	Introduction	351
6.1.1	Miniaturization and microfluidics	352
6.2	Integrated Protein Platform	356
6.2.1	Integrated selective enrichment target.	356
6.2.2	ISET sample preparation for peptide mass fingerprint.	360
6.2.3	Application to clinical samples.	361
6.2.4	Profiling of biofluid by MALDI-MS analysis	362
6.2.5	In conclusion	363
6.3	Proteomics Workstation Developments	364
6.3.1	Background	364
6.3.2	Autonomous sample preparation principle	364
6.3.3	Capillary force pumped protein workstation. . . .	365
6.3.4	Development of microstructures.	366
6.3.5	Solid-phase microextraction array	368
6.3.6	System operation.	368
6.3.7	Evaluation of the capillary force filling system for sample enrichment	370
6.3.8	Analysis of biological samples derived from 2DGE	372
6.3.9	Conclusions	375
6.4	Protein Chip Microarrays	376
6.4.1	Dual-detection protein chip microarrays.	378
6.5	Conclusions and Future Perspectives.	379
	References	380

Chapter 7. Clinical peptidomics: peptide-biomarker discovery in blood

Imke Schulte, Harald Tammen, Hartmut Selle, Hans-Dieter Zucht, Peter Schulz-Knappe

7.1	Introduction	385
------------	------------------------	------------

Contents

Chapter 10. Technologies interfacing capillary electrophoresis to mass spectrometry

Ákos Végvári, Magnus Wetterhall, Jonas Bergquist

10.1	Introduction	449
10.2	Electrospray Ionization	450
10.2.1	Interfacing CE and ESI-MS	453
10.2.2	Nanoelectrospray	455
10.3	Matrix-Assisted Laser Desorption Ionization	456
10.3.1	Interfacing CE and MALDI-MS.	459
10.4	Applications.	466
10.5	Summary	471
	Acknowledgments.	472
	References	472

Chapter 11. Protein bioinformatics

Lars Malmstroem

11.1	Introduction	487
11.1.1	Protein function	488
11.1.2	Orthologs and paralogs; homologs and analogs	490
11.1.3	Protein structure.	492
11.1.4	Bioinformatics.	492
11.2	A Bioinformatical Study Exemplified.	493
11.2.1	Sequence analysis	494
11.2.2	Domain and tertiary structure prediction	495
11.3	Summary	497
	References	498

Chapter 12. Bioinformatics standards and tools in proteomics

Frank Potthast

12.1	Introduction	501
12.2	Data Placement	503
12.3	Automated Data Placement Example: Biobeamer.	504
12.4	Data Format Standards.	505
12.4.1	PSI: mzData	506
12.4.2	PSI: mzIdent.	507
12.4.3	PSI-MI: molecular interactions	509
12.4.4	mzXML.	509

Contents

12.5	Search Engines: Estimation of Significance	510
12.6	High-Accuracy Mass Spectrometers: Composition Based Sequencing	512
12.7	High-Accuracy Mass Spectrometers: Peptoscope, Automatic PTM Detection	513
12.8	Other Current Developments.	514
12.9	Information Resources about Post-Translational Modifications	515
12.10	Initiatives for Proteomics Data Management—Open Source and Commercial.	515
12.11	Example of a Protein Quantification Workflow	516
	Acknowledgments.	517
	References	517

Chapter 13. Simulation as a tool for optimizing proteome analysis

Jan Eriksson, David Fenyö

13.1	Introduction	523
13.2	Developing Bases for Significance Testing	524
13.3	Evaluating, Comparing, and Optimizing Algorithms	525
13.4	Predicting Success Potential of Experimental Designs.	530
13.5	Summary	532
	References	532

Chapter 14. Proteomics and remodeling of extracellular matrix in lung diseases

Johan Malmstrom

14.1	Introduction	535
14.2	Remodeling of Extracellular Matrix in Lung Diseases	536
	14.2.1 Asthma.	536
	14.2.2 Chronic obstructive pulmonary disease (COPD).	538
14.3	The Role of Fibroblasts in Normal and Pathological Remodeling.	538
	14.3.1 Fibroblast activation in wound healing	539
14.4	Proteome Platforms for Biological Research.	541
	14.4.1 Protein/peptide separation.	542
	14.4.2 Mass spectrometry.	543

Contents

14.4.3	Combined strategies of protein separation and identification for biological readout	546
14.4.4	Bioinformatics	547
14.5	Proteomics Strategies in Asthma	548
14.5.1	Classification and disease markers	548
14.5.2	Molecular features behind the disease and sample complexity reduction	550
14.6	Conclusion and Future Directions	551
	References	552

Chapter 15. Mammalian cell biology and proteomics

Jorge S. Burns

15.1	The Proteome is Much More Complex than the Genome . .	557
15.2	Exploring Experimental Cell Model Systems	558
15.3	Finding Function with Selected Cells; When Less is More .	559
15.4	Sample Handling/Mishandling and Data Procurement	561
15.5	Convenient Compartments, Mining Organelles	567
15.6	Zooming in on Modifications	571
15.7	Quantitative Mass Spectrometry	573
15.8	The Challenge of Clinical Proteomics	577
15.9	Proteome Analysis of Stem Cells; Back to the Future	581
	References	583

Chapter 16. Clinical cancer proteomics

Ayodele Alaiya, Stig Linder

16.1	Introduction	597
16.2	On the Use of Biomarkers in tumor diagnosis	598
16.3	Cancer Proteomics	599
16.4	Proteomics Analysis Platforms	600
16.4.1	Instrumentation and technology platforms . . .	600
16.5	Protein Arrays and High-Throughput Techniques	605
16.6	Sample Preparation Protocols	606
16.7	Short Overview of Applied Clinical Cancer Proteomics . . .	607
16.7.1	Differential cancer diagnosis	609
16.7.2	Tumor grading and prognosis	611
16.8	Protein Profiling of Serum and other Body Fluids	614
16.9	Future Perspectives and Challenges	617

Contents
